SUMMARY

Full Stack Developer with 3+ years of experience delivering scalable, cloud-native applications across healthcare and enterprise domains. Strong expertise in Python backend development using FastAPI and Flask, microservices architecture, and REST/SOAP APIs, with hands-on experience building React.js and Node.js frontends. Proficient in AWS cloud services, CI/CD pipelines, and agile delivery, with a focus on secure, high-availability systems, performance optimization, and automation. AWS Certified Cloud Practitioner with a Master's degree in Computer Science, skilled at translating complex business requirements into production-ready solutions.

SKILLS

Methodologies & Architecture: SDLC, Agile, Waterfall, OOP, REST APIs, Cloud-Native Architecture, CI/CD
Programming Languages: Core Java, Java, JavaScript, TypeScript, SQL, Python
Frameworks & Libraries: Spring (MVC, Boot), Microservices, Hibernate, Node.js, React.js, Django, Flask, FastAPI
Web & J2EE Technologies: HTML5, CSS3, Bootstrap, jQuery, Ajax, JSON, XML, Servlets, JSP, JSTL, JDBC
Cloud & Application Servers: AWS, Azure, GCP, Apache Tomcat, IBM WebSphere
Databases: MySQL, PostgreSQL, Oracle, SQL Server, MongoDB
DevOps, Testing & Tools: Jenkins, Docker, Kubernetes, JUnit, JMeter, Jira, Git, GitHub, GitLab
Development Environments & OS: IntelliJ IDEA, Eclipse, NetBeans, VS Code, Windows, Linux, macOS

EXPERIENCE

Full Stack Developer | Amgen, USA **Jan 2025 - Present**

- Designed and enhanced enterprise healthcare applications in an agile environment, translating evolving business and regulatory requirements into scalable, secure technical solutions adopted across multiple releases.
- Developed and maintained Python-based backend services supporting healthcare workflows, data validation, and automation, improving processing reliability and reducing manual operational effort.
- Built Python-driven data transformation and validation logic to ensure data accuracy and regulatory compliance, reducing data inconsistencies across distributed systems by ~30%.
- Designed and implemented RESTful APIs enabling seamless communication between backend services and React/Node.js frontend applications, supporting stateless integrations and consistent API contracts.
- Developed and supported REST-based integration services for external healthcare platforms, payer systems, and legacy applications, ensuring secure data exchange and reliable interoperability.
- Implemented structured error handling, logging, and exception management in Python services, improving fault tolerance and accelerating root-cause analysis in production issues.
- Configured and managed AWS infrastructure (VPC, EC2, S3, ELB, CloudFront) to support production workloads, improving application availability and enabling horizontal scalability during peak usage.
- Collaborated with frontend, QA, DevOps, and product teams to deliver React and Material UI interfaces, reducing release defects and ensuring on-time delivery across agile sprints.

Assistant System Engineer| Tata Consultancy Services, India **Jul 2021 - Dec 2023**

- Developed Python-based backend tools and automation scripts used across lower and production environments, reducing manual operational effort and improving environment consistency.
- Contributed to Jenkins and Spinnaker CI/CD pipelines to automate builds and deployments, cutting release cycles from hours to minutes and improving deployment reliability.
- Improved application performance by optimizing frontend rendering logic, enhancing system throughput and reducing UI response latency.
- Designed and maintained YAML-based deployment configurations, standardizing environment setups and minimizing configuration-related deployment issues.
- Implemented Python-based validation and security workflows, including file scanning and request verification, strengthening compliance and reducing security-related failures.
- Validated REST API behavior using Postman, ensuring consistent request/response handling and preventing integration defects before production releases.
- Automated internal workflows using Python prototypes and retrieval-driven utilities, reducing repetitive manual tasks and accelerating internal tooling development.
- Authored and maintained Confluence documentation for backend services and workflows, reducing onboarding time for new engineers and improving knowledge accessibility.

EDUCATION

Masters of Science in Computer Science **Jan 2024 - May 2025**
Clark University, Worcester, MA, 01603, USA

Bachelor of Technology in Information Technology **Jun 2017 - May 2021**
Mumbai University, Ratnagiri, Maharashtra, India

CERTIFICATIONS

AWS Cloud Practitioner
