Leena Sai

Data Analyst

IL, USA | +1 3127927051 | Email: leenasai218@gmail.com | LinkedIn

Professional Summary

Analytical and results-focused **Data Analyst** with around 3 years of experience in data mining, statistical modeling, data visualization, and reporting across healthcare and IT services domains. Proficient in **SQL, Python, R, Tableau, Power BI, Excel, and cloud analytics platforms**, with proven expertise in building **ETL pipelines**, performing advanced statistical analysis, and delivering actionable insights to drive operational efficiency and business growth. Adept at collaborating with cross-functional teams, automating reporting workflows, and applying **data governance best practices** to ensure accuracy and compliance.

Technical Skills

- **Languages & DA Tools:** Python, R, SQL, Excel (Pivot Tables, VLOOKUP, Macros), (Pandas, NumPy, Seaborn, Matplotlib)
- **Visualization Tools:** Tableau, Power BI, Looker, Google Data Studio
- **Databases:** MySQL, SQL Server, MongoDB, Cassandra, Oracle
- **Cloud Technology:** AWS (S3, EC2, IAM, RDS, Lambda), Azure, SSIS, SSAS, SSRS, Snowflake
- **Big Data & Data Engineering:** Hadoop, Spark, Kafka, ETL, Data Cleaning, Data Wrangling, Airflow, Alteryx
- **CI/CD:** Docker, Kubernetes, Jenkins, Shell Scripting
- **Machine Learning:** Regression, Classification, Clustering, Decision Tree, Boosting & Bagging, NLP
- **Project Management:** Jira, Trello, Service First, ServiceNow
- **IDEs**: Visual Studio Code, Jupyter Notebook, RStudio, Atom
- **Tools:** Git, GitHub, Microsoft Office Suite (PowerPoint, Excel, Word), Power Pivot, Power View, Power Query
- **Soft Skills:** Critical Thinking, Communication Skills, Presentation Skills, Problem-Solving

Professional Experience

Data Analyst, Humana, USA — **Jan 2025 – Present**

- Designed and developed automated ETL pipelines using Python, SQL, and Azure Data Factory to integrate healthcare claims, patient demographics, and provider data from diverse sources, increasing data availability by 45% and enabling near real-time analytics for operational insights.
- Created and maintained interactive Power BI and Tableau dashboards to monitor KPIs such as patient satisfaction scores, claims processing times, and treatment cost trends, empowering executives to make faster, data-driven decisions.
- Performed advanced statistical modeling in Python (Scikit-learn, Statsmodels) to forecast patient admissions and resource utilization, improving staffing accuracy by 20% and reducing operational costs.
- Collaborated with healthcare operations teams to gather data requirements, design standardized reporting templates, and ensure analytics outputs met HIPAA compliance standards while aligning with organizational KPIs and business objectives.
- Implemented data governance frameworks with automated validation scripts, anomaly detection, and quality checks, reducing data inconsistencies by 30% while ensuring compliance with industry regulations and internal standards.
- Optimized SQL queries and stored procedures for large datasets by refining indexing, joins, and execution plans, improving query performance by 40% and enhancing the responsiveness of analytics dashboards used by 500+ business users.
- Conducted ad-hoc data analyses to assess program performance and treatment outcomes, uncovering key insights that led to targeted interventions and improved patient recovery rates by 12%.
- Automated recurring monthly and quarterly reports using Python and VBA, reducing preparation time from 5 days to 1 day and freeing analyst capacity to focus on strategic, value-added initiatives.

Data Analyst, Mphasis, India — **June 2021 – July 2023**

- Extracted, transformed, and loaded datasets from ERP, CRM, and marketing platforms into Snowflake and SQL Server using Talend, ensuring data consistency, integrity, and readiness for advanced analytics and reporting.
- Developed Excel models and Tableau dashboards to monitor operational KPIs, project costs, and resource utilization, improving project delivery efficiency by 15% through more informed and effective allocation decisions.
- Performed exploratory data analysis (EDA) in Python to identify operational inefficiencies and revenue leakage, delivering actionable insights that enabled a $1.2M revenue recovery for a key client.
- Integrated cloud-based analytics tools such as AWS Redshift and GCP BigQuery to scale enterprise reporting capabilities, reducing data refresh times from several hours to just minutes and enabling faster decision-making.
- Collaborated with stakeholders to translate complex business requirements into efficient SQL-based solutions, ensuring analytics outputs directly supported strategic objectives and informed high-impact decisions.
- Automated data validation processes using Python scripts and SQL triggers, enhancing monthly report accuracy and eliminating recurring data quality issues across critical business datasets.
- Designed KPI scorecards that aggregated data from multiple business units, improving transparency and providing leadership teams with clear visibility into performance metrics for informed decision-making.
- Standardized reporting templates for client deliverables, reducing manual formatting time by over 20 hours each month and enhancing consistency, accuracy, and overall client satisfaction.
- Collaborated with data engineers to refine data models and schemas, optimizing query performance and significantly improving dashboard load times for a seamless end-user experience.

Education

Masters | Illinois Institute of Technology. — **Aug 2023 - May 2025**

Bachelor | Koneru Lakshmaiah Education Foundation. — **July 2019 - April 2023**
