OBJECTIVE:

Results-driven BI and Data Analytics professional with 4+ years of experience in transforming data into actionable insights through Power BI, SQL, and cloud-based analytics. Adept at leading cross-functional discussions, translating business needs into reporting solutions, and delivering executive-ready dashboards. Seeking to contribute my data storytelling and leadership capabilities to drive strategic business intelligence initiatives.

TECHNICAL SKILLS

- **Languages & Tools**: Python, R, SAS, SQL, Shell Scripting, Git
- **Cloud Platforms & Services:** AWS (EC2, S3, Redshift), GCP
- **Databases:** SQL Server, MySQL, Snowflake, AWS Redshift, MongoDB
- **Data Science & Analytics Libraries:** Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn
- **ETL & Data Pipelines:** Data Ingestion, Data Transformation, Automation (Python, SQL, AWS Redshift)
- **Visualization:** Power BI, Tableau
- **Version Control & Collaboration:** Git, JIRA, Agile Methodologies

PROFESSIONAL EXPERIENCE

Data Analyst, Mergen IT **July 2024 – Present**

- Designed, developed, and optimized robust ETL data pipelines using Python, SQL, and AWS Redshift, streamlining data ingestion and transformation across multiple systems.
- Implemented automated data validation scripts and quality assurance checks to ensure data accuracy, consistency, and integrity.
- Led cross-team working sessions to define reporting needs and streamline data delivery timelines.
- Owned the delivery of high-priority dashboards by coordinating efforts between data engineering and BI teams.
- Supported real-time data monitoring and visualization using Grafana and Prometheus for system performance metrics.
- Gained practical experience with AWS services (EC2, S3, Redshift) and cloud orchestration through deployment in Kubernetes environments.
- Leveraged Python scripting and AWS tools to automate recurring data workflows and enhance scalability in cloud-based environments.

Teaching Assistant, University of North Texas (UNT) **August 2023 - May 2024**

- Guided undergraduate and graduate students through hands-on, real-world statistical analysis projects by providing instruction and support in Python, R, and SAS programming environments.
- Automated complex data preprocessing workflows using SQL to streamline and support research-oriented analytical tasks conducted by faculty and students.
- Mentored a group of 10+ students in developing independent research dashboards, promoting data storytelling best practices.
- Initiated and led weekly sync-ups with faculty to prioritize research reporting needs and align visualization goals.
- Contributed to curriculum development by integrating practical, case-based analytics exercises into coursework to enhance experiential learning and critical thinking skills.

Associate Engineer, EQUIFAX **Nov 2021 - Dec 2022**

- Developed and maintained scalable data pipelines on Google Cloud Platform (GCP) to support both batch and real-time data ingestion, processing, and analytical operations.
- Engineered secure, high-performance APIs to enable reliable and seamless data exchange between distributed systems and applications across the organization.
- Performed in-depth root-cause analysis of data pipeline failures to identify, troubleshoot, and prevent issues, ensuring consistent and reliable data delivery.
- Automated data reconciliation and validation workflows to significantly improve data integrity, consistency, and reliability across enterprise analytics processes.
- Designed and deployed intuitive dashboards using advanced data visualization tools to monitor key performance indicators (KPIs) and assess pipeline performance metrics in real-time.
- Took ownership of end-to-end delivery of executive dashboards for senior stakeholders. Led root-cause analysis meetings to address pipeline failures and propose long-term solutions.
- Enhanced the overall analytics infrastructure by designing and implementing schema structures specifically optimized for scalable, efficient reporting and querying.

Junior Data Analyst, NVIDIA. **Sep 2020 - Nov 2021**

- Designed and implemented Python-based ETL processes to efficiently handle, clean, and transform large-scale sensor datasets—including LiDAR and Radar—used in autonomous vehicle testing environments.

- Authored complex and optimized SQL queries to enable fast, reliable retrieval and transformation of structured and semi-structured sensor data across multiple storage systems.
- Developed and maintained interactive Tableau dashboards to visualize key system performance indicators and monitor the reliability of real-time sensor outputs.
- Championed improvements in sensor data reporting by driving feedback sessions with test and ML teams.
- Independently managed Tableau dashboard updates for internal KPIs viewed by leadership.
- Detected and resolved critical data anomalies while improving the robustness of data pipelines, thereby enhancing the accuracy and trustworthiness of advanced analytics outputs.
- Conducted in-depth time-series analysis of autonomous vehicle sensor data to uncover patterns and trends related to performance, reliability, and system behavior.
- Partnered with machine learning teams to curate, clean, and prepare structured datasets tailored for use in predictive modeling and algorithm training.

EDUCATION

UNIVERSITY OF NORTH TEXAS **MAY 2024**
Master's, Advanced Data Analytics.

CERTIFICATIONS

- AWS Data Engineer Associate
- Microsoft Power BI Data Analyst
- Google Data Analytics
- IBM Certified Data Engineer
