NEEHARIKA BAIRI

Data Analyst

Location: NJ| **Phone:** 732-844-3936| **Email:** neeharikab0726@gmail.com
LinkedIn

SUMMARY

- **Above 3+ years of experience** with a diverse skill set, including **Python, SQL, T-SQL, and SAS**, and **ERP(SAP** and **Oracle)** with expertise in leveraging these languages for comprehensive data analysis.
- Experienced in working with diverse databases including **MySQL, SQL Server, and MongoDB**, demonstrating strong database management skills.
- Skilled in utilizing popular libraries such as **NumPy, Pandas, SciPy, Scikit-Learn, Seaborn, Matplotlib, and PySpark** for efficient data manipulation, analysis, and **machine learning** tasks.
- Well-versed in **Agile (SCRUM) and Waterfall methodologies**, adapting a flexible and collaborative approach to project management.
- Adept at creating impactful visualizations using **Tableau, Power BI, and MS Excel**, enhancing data-driven decision-making processes.
- Demonstrated analytical **proficiency in data cleaning, data mining, data warehousing, predictive analytics, statistical analysis**, **data wrangling, data visualization, ETL, and text mining.**
- Experienced in a variety of machine learning techniques, including regression, classification, random forest, KNN, clustering, decision trees, and CNN.
- Familiarity with cloud technologies, particularly **AWS (EC2, EBS, S3, Lambda),** showcasing adaptability to modern data storage and processing solutions.
- Proficient in **UML and Microsoft Visio** for effective communication of data models and system architectures.
- Well-versed in version control using **Git and proficient in IDEs like PyCharm, Eclipse, and for efficient development workflows.**

SKILLS

Languages:	Python, SQL, T-SQL, SAS, MATLAB
Libraries:	NumPy, Pandas, SciPy, Scikit-Learn, Seaborn, Matplotlib, PySpark
Databases:	MySQL, SQL Server, MongoDB
Methodologies:	Agile (SCRUM), Waterfall
Visualization Tools:	Tableau, Power BI, MS Excel
Analytical Skills:	Data Cleaning, Data Mining, Data Warehousing, Predictive Analytics, Statistical Analysis, Data Wrangling, Data Visualization, ETL, Text Mining,
ML Techniques:	Regression, Classification, Random Forest, KNN, Clustering, Decision Trees, CNN
Cloud Technologies:	AWS (EC2, EBS, S3, Lambda)
Others & Tools:	UML, Microsoft Visio, Git, PyCharm, Eclipse

EXPERIENCE

Honeywell, USA

Data Analyst **Feb 2024 - Present**

- Spearheaded the advancement and upkeep of Agile-focused dashboards and reports, accurately reflecting sprint goal progression, backlog status, and team performance metrics.
- Conducted in-depth data analyses using Python, SQL, T-SQL, and SAS, producing actionable insights that informed strategic decisions.
- Produced engaging and informative visualizations using Seaborn and Matplotlib, effectively conveying data insights to stakeholders.
- Developed interactive dashboards in Tableau, enhancing data accessibility and decision-making processes across departments.
- Designed and implemented ETL processes to extract, transform, and load data from multiple sources, ensuring data integrity and consistency throughout.
- Utilized machine learning methodologies such as regression, classification, random forests, KNN, clustering, decision trees, and CNN to address complex business challenges, resulting in a 30% enhancement in predictive analytics.
- Orchestrated the management and deployment of scalable solutions on AWS (EC2, EBS, S3, Lambda), optimizing cloud resource usage and reducing operational costs by 15%.
- Administered and fine-tuned MongoDB and MySQL databases, ensuring high performance and reliability for data storage and retrieval.

Environment: Python, SQL, T-SQL, SAS, Seaborn, Matplotlib, Tableau, MongoDB, MySQL, AWS (EC2, EBS, S3, Lambda), Agile (SCRUM), ETL, Machine Learning Algorithms

LG AD Solutions, USA

Data and Business Analyst **Aug 2023 - Dec 2023**

- Executed comprehensive data cleaning and preparation of Alphonso's TV audience data using SAS and MATLAB, ensuring high data quality for accurate statistical analysis.

- Directed projects using SDLC and Waterfall methodologies, managing each stage from requirements gathering to deployment, resulting in a 25% increase in on-time delivery and a 15% decrease in rework.
- Integrated NumPy, Pandas, and SciPy into data wrangling workflows, achieving a 30% reduction in data preparation time and enhancing overall analysis efficiency.
- Engineered and sustained SQL scripts to automate data cleansing processes, reducing manual effort by 30% and elevating data accuracy. Implemented robust mechanisms for continuous data quality improvement and streamlined operational efficiency.
- Implemented advanced SQL Server functions and stored procedures for complex data extraction, transformation, and loading (ETL) processes, reducing data processing time by 30%.
- Leveraged Tableau to design and develop visually compelling dashboards and reports, providing in-depth insights into TV viewership data. This enhanced data interpretation for informed decision-making and improved audience engagement.
- Utilized Seaborn and Matplotlib to create interactive and informative dashboards, contributing to a 30% improvement in report effectiveness and user engagement.
- Applied advanced machine learning techniques, including Clustering, Decision Trees, Regression, Classification, and Random Forest, to analyze large datasets and uncover hidden patterns. This significantly enhanced understanding of customer behavior and predictive modeling accuracy, resulting in a 22.5% improvement.
- Conducted thorough statistical analysis to derive actionable insights, supporting data-driven decision-making processes.
- Engaged in continuous learning and improvement of data analysis techniques, staying up to date with industry trends and best

Environment: Python (NumPy, Pandas, SciPy), SQL, SAS, MATLAB, SQL Server, Tableau, Seaborn, Matplotlib, SDLC, Waterfall, ETL, Machine Learning (Clustering, Decision Trees, Regression, Classification, Random Forests)

Metasystems, India
Data Analyst **Jun 2019 - Sep 2021**

- Led the requirements gathering, analysis, design, development, and testing phases of application production using the Waterfall methodology.
- Developed and optimized SQL queries in Python to extract and analyze data from extensive databases, cutting query execution time by 40% and boosting overall efficiency.
- Conducted data analysis with Pandas and NumPy, effectively cleaning, transforming, and manipulating large datasets, leading to enhanced data quality and accuracy.
- Implemented efficient ETL processes, reducing data processing times by 30% and significantly improving data warehousing efficiency.
- Designed and deployed data models in Power BI, integrating data from multiple sources, achieving a 50% reduction in data processing time and enhancing data accuracy.
- Worked closely with stakeholders to optimize AWS resources (EC2, EBS) for cost-effective data storage and processing, leading to a 15% reduction in infrastructure costs.
- Utilized UML and Microsoft Visio for detailed data modeling and visualization, improving communication and collaboration within cross-functional teams and enhancing project understanding by 15%.
- Operated advanced data analysis techniques to extract insights from large datasets, contributing to informed decision-making and business strategy formulation.

Environment: Python (Pandas, NumPy), SQL, Power BI, ETL, AWS (EC2, EBS), UML, Microsoft Visio, Waterfall methodology

EDUCATION

Southern New Hampshire University, Manchester **NH**
Master of Science in Information Technology, **GPA- 3.98/4** **Aug 2022 – Dec 2023**
Jawaharlal Nehru Technological University **India**
Bachelor of Technology in ECE, **GPA- 7.45/10** **Aug 2017 – Jun 2021**

ACADEMIC PROJECTS

Medicine Expiration Application

- Led a team of 5 to build a web and Mobile application for Medicine Expiration, played a major role in working with frontend and database.

Hudson Kayak Project

- Utilized MS Project to create a comprehensive project plan, ensuring timely completion and adherence to requirements.
- Designed a well-structured system architecture in MS Visio, encompassing hardware, software, networks, and security.
- Visualized system usage and data flow through use case and data flow diagrams using specialized software tools.
- Crafted an efficient and normalized database with entity relationship diagrams, guaranteeing data accuracy and scalability using specialized software tools.

Arduino-based hand gesture control system for computer

- Developed Arduino-based hand gesture control system with sensors for computer interaction.
- Programmed microcontroller and designed Python UI for customization, ensuring accurate and responsive gesture recognition.
