DIVYA JILLELA

Data Analyst

Location: MA **|** **Phone:** (774) 232-5189 **|** **Email:** Jilleladivya94@gmail.com **|** **LinkedIn:** www.linkedin.com/in/divya-j1

SUMMARY

- Over 3+ years of experience as a Data Analyst, specializing in data wrangling, data cleaning, and data analysis across financial, healthcare, and IT industries.
- Proficient in Python, SQL, and R, with expertise in using libraries like Pandas, NumPy, and Scikit-learn to extract insights from complex datasets.
- Skilled in designing and developing interactive dashboards and reports using Tableau, Power BI, and MS Excel for clear and effective data visualization.
- Strong experience in cloud-based data processing using AWS (S3, Redshift, Glue) and Azure, enabling scalable solutions and improved data accessibility.
- Adept in ETL processes, data governance, and ensuring compliance with HIPAA, financial regulations, and data privacy standards.
- Experience in applying machine learning techniques, including regression analysis, classification models, and predictive analytics to enhance business decisions.
- Proven ability to optimize relational (MySQL, Oracle) and NoSQL (MongoDB) databases, ensuring seamless data integrity and retrieval for analytics.
- Hands-on experience in applying data mining, cleansing, and preprocessing techniques to improve data quality and accuracy.

TECHNICAL SKILLS

- **Languages**: Python, R, SQL
- **Database**: MySQL, NOSQL, Oracle, MongoDB
- **Visualization Tools**: Tableau, PowerBI, MS Excel
- **Cloud Technologies**: AWS (EC2, S3, Lambda, Redshift), Microsoft Azure (
- **Libraries**: Pandas, Matplotlib, NumPy, Plotly, Seaborn, Scikit-learn
- **Methodologies**: Agile, Waterfall
- **Analytical Skills**: Data Wrangling, Data Mining, Data Analysis, Data Visualization, Data Warehousing, ETL, A/B Testing, Data Governance
- **Version Control:** Git, GitHub

PROFESSIONAL EXPERIENCE

McKesson, MA
Data Analyst — **Feb 2024 - Current**

- Analyzed healthcare datasets using Python and SQL, applying data preprocessing techniques such as handling missing data, duplicates, and outliers, to improve data accuracy and optimize processing times. Cleaned and transformed data to improve reporting accuracy and streamline analysis for operational decision-making.
- Automated data reporting workflows by developing Power BI dashboards and integrating them with MySQL and AWS Redshift, which provided real-time data updates and scorecards for critical healthcare metrics such as patient care performance, treatment outcomes, and hospital resource allocation. This improved decision-making and reduced the manual workload by 40%.
- Extracted, manipulated, and analyzed large datasets using complex SQL queries to improve data retrieval performance from MySQL databases. Enhanced query performance by optimizing indexes and stored procedures, reducing data processing times by 30%.
- Led the deployment of cloud-based data processing solutions using AWS services such as S3 (for scalable storage), Redshift (for data warehousing), and Glue (for ETL pipelines), automating data processing tasks and improving data accessibility across healthcare departments.
- Conducted Exploratory Data Analysis (EDA) using Seaborn, Matplotlib, and Plotly, uncovering trends and insights from patient and clinical data that directly informed strategic initiatives, resulting in more efficient patient management and better treatment strategies.
- Implemented data governance best practices and created documentation for data workflows and ETL processes, ensuring compliance with healthcare regulations and HIPAA. Provided training to stakeholders on the importance of data governance, improving data literacy across the organization.
- Applied Agile methodologies to plan, manage, and execute data analysis projects, ensuring timely delivery of reports and dashboards while maintaining compliance with healthcare data standards.

KPMG, INDIA
Data Analyst — **Aug 2021 – Aug 2022**

- Developed supervised and unsupervised machine learning models using Python and R, applying techniques such as regression analysis, clustering, and classification to predict key business metrics, which improved the accuracy of financial forecasting and helped optimize business processes.
- Led the data cleaning and exploration phase for large datasets, ensuring data quality by addressing data inconsistencies and missing values, which reduced data errors by 25% and increased overall project ROI.

- Designed and optimized MySQL queries, building materialized views to improve database performance and reduce the time taken to process multi-layered datasets by 30%, thus ensuring quicker access to critical business data for real-time decision-making.
- Collaborated closely with stakeholders to translate complex business requirements into functional technical specifications, ensuring that data solutions aligned with strategic business objectives and were scalable to meet future business needs.
- Improved database performance through deep knowledge of transaction management, indexing, and schema design principles, leading to faster query execution and more efficient database operations.
- Implemented data validation processes and SQL-based accuracy checks to maintain high data integrity, minimizing financial discrepancies and improving the accuracy of data reports used for audits and compliance purposes.
- Assisted in the development and implementation of data governance strategies, creating and enforcing quality control measures that reduced data-related errors and correction costs by 20%.

Trinity Technolabs, India
Data Analyst **Aug 2020 – Jul 2021**

- Developed complex SQL queries for ad-hoc analysis and data extraction, improving the efficiency of data retrieval from large datasets, and supporting marketing and finance departments with real-time insights.
- Automated repetitive data processing tasks by writing custom Python scripts using Pandas and NumPy for data manipulation, reducing manual processing time by 40% and ensuring consistent data accuracy across projects.
- Built Tableau dashboards to visualize key performance indicators (KPIs), creating detailed charts and graphs that improved stakeholders' understanding of key business metrics and enabled data-driven decision-making.
- Supported cloud-based data solutions by leveraging AWS S3 for scalable data storage and ensuring high availability and reliability of critical business data for data analytics and reporting.
- Applied data preprocessing techniques such as data wrangling, data transformation, and data cleansing, ensuring the data used for analysis was clean, accurate, and ready for further analytics tasks.
- Actively participated in Agile development processes, working within cross-functional teams to ensure timely project completion and continuous delivery of high-quality data solutions.

PROJECT

Clark University | Capstone

- Led a cybersecurity analysis project, using Tableau and Power BI to visualize global breach data, and developed mitigation strategies for digital asset protection.
- Implemented machine learning models to predict security breaches and enhanced data-driven decision-making through predictive analytics.

EDUCATION

Masters, Information Technology. **Aug 2022 - Dec 2023**
Clark University, Worcester, MA.

Bachelors in computer science and engineering. **Aug 2017 - May 2021**
Jawaharlal Nehru Technological University, Hyderabad, India.

CERTIFICATONS

- Python from Coursera, (University of Michigan) Certificate
- Data science from Coursera, (IBM) Certificate
- AI (Artificial Intelligence) for everyone From Deep learning AI Certificate
