SUMMARY

Data Engineer with 4+ years of experience in designing and implementing scalable data solutions using AWS, Azure, and Snowflake. Proficient in Python, SQL, and ETL workflows, with a proven track record of optimizing data pipelines and improving query performance. Skilled in building interactive dashboards using Tableau and Power BI for data-driven decision-making. Implemented CI/CD pipelines using Jenkins and set up Apache Airflow for workflow automation.

EXPERIENCE

Data Engineer, Mitchell International, CA

May 2024 – present

- Building automated data pipelines using AWS Glue and AWS Lambda, reducing manual effort and improving efficiency.
- Developing ETL workflows to ingest, transform, and load data into Snowflake and Amazon Redshift, **improving query performance by 30%** through optimizing techniques.
- Utilizing AWS services like S3 for data storage, EC2 for computing, Kinesis for real-time streaming, and Step Functions for workflow orchestration.
- Designing dashboards using Tableau to provide real-time insights for data- driven decision-making.
- Optimizing **SQL** queries for data extraction, aggregation, **reducing data processing time by 20%** and improving overall system efficiency.
- Automated data ingestion from **AWS S3 and on-prem databases** into **Snowflake** using Python and SQL scripts.
- Developed and optimized **ETL workflows** using **AWS Glue, Apache Airflow, and Python**, reducing migration time by **40%**.
- Using Python for data cleansing, transformation, API integrations, automating ETL and validation tasks.
- Enhancing **data pipelines with Python** by automating data transformation and API integrations, reducing manual effort and improving overall data flow efficiency.

Environment: AWS, Python, Tableau, SQL, Snowflake

Big Data Developer, General Motors, Austin, Texas

Jan 2023 – May 2024

- Loaded and transformed structured, semi-structured, and unstructured data using Hive, Spark SQL, and Azure Databricks.
- Migrated **SQL** databases to **Azure Data Lake**, Databricks, Synapse Analytics, and Azure SQL Data Warehouse for scalable analytics.
- Developed **end-to-end data integration pipelines** using **Azure Data Factory, Snowpipe, and AWS Lambda**, reducing manual intervention.
- Designed and implemented large-scale data solutions in Snowflake and Azure, optimizing storage, performance, and cost.
- Developed ETL pipelines using Azure Data Factory and Python (PySpark, Pandas, NumPy) for efficient data integration and transformation.
- Led **data migration** from **Hadoop-based Big Data environments** (Hive, Spark SQL) to **Snowflake**, ensuring a seamless transition with **zero data loss**.
- Converted **HiveQL queries to Snowflake SQL**, ensuring performance improvements and compatibility.
- Built interactive dashboards using Power BI, providing real-time insights for business analytics.
- Managed and optimized data storage using Azure Data Lake, Blob Storage, and Snowflake, ensuring efficient data retrieval and processing.
- Automated data workflows with Azure DevOps **CI/CD** pipelines and Python-based API integrations for seamless deployment.
- Optimized Azure **SQL** Data Warehouse and Databricks clusters, improving performance, cost

efficiency, and query execution times.

Environment: Azure, Databricks, Python, Tableau, SQL, Hive

Jr. Data Engineer, Capgemini, India

Jan 2021– Sept 2022

- Developed ETL pipelines using Python and SQL, optimizing data extraction, transformation, and loading processes.
- Consolidated and analysed data from multiple sources, generating reports and insights to optimize logistics operations and track key metrics.
- Reduced **shipping costs by 10%** through in-depth SQL analysis of transportation data.
- Created and managed relational database by optimizing SQL queries for data extraction, manipulation, and reporting.
- Designed and maintained interactive **Tableau** dashboards for real-time tracking of supply chain and transportation data.
- Implemented data validation, cleansing techniques, and monitored pipeline performance to ensure data quality and efficient processing.

Environment: ETL Pipeline Development, SQL Optimization, Tableau, Python.

ACADEMIC PROJECT

Master's Project:

Sales Trend Analysis and Visualization

- Stored historical sales data and cleaned it using automated processes.
- Analyzed sales trends and identified seasonal patterns and promotional effects using Python and SQL.
- Created interactive dashboards in Tableau to visualize trends and forecast future sales.
- Provided insights to improve inventory management and sales forecasting.

EDUCATION

- **Master of Science in Data Analytics –** Franklin University, Columbus, OH | May 2024 | GPA: 3.80
- **Bachelor of Technology in Electronics and Communication Engineering –** JNTU, Hyderabad, India | Dec 2020 | GPA: 3.50

TECHNICAL SKILLS

- **Languages**: Python, SQL, pyspark, CSS, HTML
- **Databases**: MySQL, PostgreSQL, SQL Server, HBase, MongoDB, Cassandra
- **Cloud Platforms**: AWS (EC2, EMR, S3, Glue, Redshift), Azure (Data Lake, Data factory, Databricks), Snowflake
- **Tools**: Tableau, Power BI, Jenkins, Git, Kubernetes, Kafka, Splunk
- **Data Formats:** JSON, CSV, Parquet, Avro, Textile.
- **Relevant Coursework:** Python, Data Analysis and Visualization Techniques, Software Analysis, Reporting, Web Development, Operating Systems.

SOFT SKILLS

Communication: Clearly conveyed technical concepts to non-technical stakeholders.
Problem-Solving: Resolved data pipeline bottlenecks, improving efficiency.
Time Management: Delivered multiple projects on time with high quality.
Attention to Detail: Ensured data accuracy through rigorous validation processes.

Certifications:

- Data Visualization with tableau- Credly by Pearson
- Data Mining with R- Credly by Pearson
- Discover Data Analysis- Microsoft
