Harsh Parikh

harshparikh001@gmail.com 219-455-0852 Linkedin

Professional Summary:

Data Analyst with 3+ years of global, remote collaboration experience transforming raw data into **actionable insights** that drive innovation and business growth. Expert in **Python**, **SQL**, and **Power BI** for robust data modeling, storytelling, and interactive dashboarding. Proven track record of leveraging **AWS cloud services**, **data mining techniques**, and **database modeling** to enable strategic decision-making.

Work Experience:

Data Analyst | First Economy — **Sep 2023 – Nov 2024**

- Implemented a **LightGBM** customer churn prediction model using **scikit-learn and pandas**, improving customer retention by **15%** through targeted feature engineering.
- Developed a Python automation tool to streamline report generation, **reducing processing time by 30%** and boosting team productivity via modular scripting and robust error handling.
- Utilized **Dataiku** to design and execute data preparation workflows and prototype basic machine learning models, improving data profiling efficiency and **accelerating analysis workflows**.

Data Scientist | Motex Solutions — **Mar 2022 – May 2023**

- Engineered **Power BI dashboards** combining SQL, Excel, and AWS data to track **125 real-time sales KPIs** with rigorous validation, boosting data accuracy and decision-making.
- Authored and optimized **32 SQL queries** and performed end-to-end cleaning and feature engineering in Python across three sources, eliminating **28 hours of manual work** per week.
- Co-developed an **ARIMA-based anomaly detection** pipeline with real-time alerts, cutting data **inconsistencies by 20%** and ensuring high-quality inputs for analytics.

Backend Developer | Dolat Capitals — **Jan 2021 – Nov 2021**

- Built and maintained Python-based high-frequency trading systems, improving **data processing speed by 20%** for real-time market analysis. Partnered with quant analysts to translate strategies into code, prioritizing precision and scalability.
- Implemented and fine-tuned trading algorithms in collaboration with quant researchers, improving **backtest performance by 15%** and **ensuring millisecond-level latency** in production environments.

Research and Publications:

Decentralization of Traditional Systems Using Blockchain — **Link**

- Researched Blockchain's potential and usability in **peer-to-peer networks**, analyzing its ability to solve security, privacy, and scalability challenges, evaluating decentralized consensus mechanisms, debunking public misconceptions, and **exploring applications** across finance, supply chain, voting, healthcare, and smart contracts.

Personal Project:

F1 Qualifying Time & Grid Position Predictor — **Link**

- Built an **end-to-end ETL pipeline** with FastF1, automating practice-session data collection, cleaning, and feature engineering (lap-time stats, sector speeds, tyre metrics) for model training.
- Validated real-world applicability by forecasting **Japanese GP qualifying outcomes**, showcasing end-to-end capability from live practice data ingestion to actionable grid-position predictions and reinforcing insights valuable for race strategists and performance analysts. **Benchmarked** SVR, Random Forest, and XGBoost on three filtered datasets, with XGBoost achieving **R^2 0.998 and MAE 0.233 s**.

Education:

Purdue University, Indiana — **May 2025**

Master of Science - Computer Science

Technical Skills:

- **Programming & Analysis:** Python, SQL, DAX, Time-Series Analysis, A/B Testing, MySQL, Oracle, MongoDB, Git
- **BI & Visualization:** Power BI, Amazon QuickSight, SAS Visual Analytics, Google Analytics, Adobe Analytics
- **Cloud & Data Engineering:** AWS (S3, Redshift, EC2, Lambda, SageMaker), Azure Data Factory & Databricks, SSIS, Informatica PowerCenter, Alteryx, Data Modeling (Star Schema)
- **APIs & Automation:** RESTful API design, AWS Glue, SSIS, API Automation
