SUMMARY

Data Scientist with expertise in designing and deploying scalable machine learning and deep learning models, predictive analytics, and data-driven solutions across healthcare, IoT, and GIS domains. Skilled in Python, TensorFlow, PyTorch, NLP (BERT, SpaCy), and Computer Vision (CNN, GAN) for addressing complex business challenges. Proficient in data engineering (Snowflake, Azure Synapse, SQL) and data visualization (Power BI, Tableau) to deliver actionable insights.

SKILLS

Programming: Python, R, SQL, Java
ML & DL Frameworks: TensorFlow, Keras, PyTorch, scikit-learn
Deep Learning & NLP: CNN, RNN, LSTM, GAN, NLTK, SpaCy, BERT
Data Processing & Analysis: NumPy, Pandas, SciPy, Matplotlib, Seaborn
Cloud Platforms: AWS (S3, Lambda), Azure, GCP (Vertex AI)
Visualization: Tableau, Power BI
Other Skills: Feature Engineering, Model Evaluation, A/B Testing, Data Cleaning, Team Collaboration

EDUCATION

Bachelor of Science in Data Science, Minor in Business Analytics, Concentration in Industrial Engineering
University of Illinois at Chicago, Chicago, IL

EXPERIENCE

Cardinal Health, FL | April 2024 – Current | Data Scientist

- Developed predictive models using Python, Scikit-learn, and TensorFlow to optimize supply chain logistics, reducing operational costs by 18% through demand forecasting.
- Designed and deployed Power BI dashboards for real-time analytics, enabling stakeholders to track KPIs and make data-driven decisions.
- Performed feature engineering and A/B testing on clinical trial datasets, improving model accuracy by 22% for patient outcome predictions.
- Leveraged Azure Synapse Analytics and Snowflake to build scalable data pipelines, reducing ETL processing time by 30%.
- Collaborated with cross-functional teams to implement NLP (BERT, SpaCy) for automating medical document classification, cutting manual effort by 40%.
- Ensured data governance compliance by documenting workflows and maintaining audit trails for sensitive healthcare data.
- Created custom NLP pipelines (NLTK, Transformers) to analyze customer sentiment from social media, reducing response time by 50%.

PROJECTS

City Data Analysis Automation | Tools: Python, SQL, Excel

- Created a Visual Basic for Applications (VBA) project to automate the analysis of Chicago city data in Microsoft Excel.
- Developed and implemented custom macros to streamline the analysis of population demographics, infrastructure, and public services data.

Statistical Analysis and Regression Modeling in Cigarette Smoke | Tools: Python, R

- Conducted an in-depth analysis of the relationship between tar and carbon monoxide content in cigarette smoke using statistical methods.
- Developed a strong linear regression model with a high correlation coefficient, indicating a positive correlation between tar and carbon monoxide levels.
- Focused on minimizing the sum of squared residuals to improve prediction accuracy.
