EDUCATION

Arizona State University, Tempe **August 2023 - May 2025**
Master of Science (M.S.) - Computer Science *GPA: 4.00/4.00*
- Key Courses: Artificial Intelligence, Data Mining, Statistical Machine Learning, Data Visualization, Foundation of Algorithms, Data Processing at Scale, Software Security, Digital Video Processing

Birla Institute of Technology and Science, Hyderabad, India **June 2017 - May 2021**
Bachelor of Engineering (B.E.) – Computer Science
- Key Courses: Software Engineering, Database Management Systems, Data Structures and Algorithms

SKILLS

Programming Languages: JavaScript, Python, C, C++, Java, SQL, HTML, CSS, TypeScript
Framework/Technologies/Tools: React, NodeJS, Angular, Django, Docker, Amazon Web Services (AWS), Jest, Enzyme, MySQL, PostgreSQL, MongoDB, Redux, React Sagas, Jenkins, Figma, Adobe XD
Technical Skills: Version Control, Agile, Scrum, Git, Bitbucket, Confluence, PR Reviews, Code Documentation

EXPERIENCE

Zaggle Prepaid Ocean Services Pvt. Ltd. **Hyderabad, India**
Software Engineer *August 2021 – July 2023*
- Led the development of Zoyer, a business spend-management platform, managing a team of 10 developers, designing UI architecture, API integrations, and contributing to Zoyer's 35% net profit increase in Q1 2024.
- Developed & maintained UI/UX for SaaS application, 'Propel,' and working on Save, EMS and Edge as needed, improving performance and user experience across platforms.
- Engineered the dynamic Admin Registration module, reducing manual setup time per client by 90% through a self-service customization portal. Built the Reports & Analytics module in 'Propel,' enabling HR teams to track sales data, manage reward points, and facilitate redemptions.
- Integrated Stripe, Google Pay and Razorpay payment gateways, streamlining online invoicing and payments.
- Owned the end-to-end deployment pipeline for 'Propel' and 'Zoyer,' managing Git workflows, code reviews, DevOps, and movement across Dev, Staging and Production environments via Jenkins & GitHub Actions.
- Conducted 15+ front-end interviews, leading the first round of screening for new hires and collaborating with the CTO on hiring decisions.
- Bridged communication between product teams & clients, evaluating feasibility of tasks before project kickoffs.

Software Engineering Intern *August 2020 – December 2020*
- Redesigned & optimized authentication pages for 'Propel' & 'Save,' increasing user sign-ups by 20%.
- Implemented unit & functional tests using Enzyme & React Testing Library for all Zaggle products, enhancing reliability. Such dedication to testing elevated dependability and functionality of these software solutions.

Electronic Service Delivery, Telangana E-Government **Hyderabad, India**
Software Engineering Intern *May 2019 – July 2019*
- Built a Document Classification System to automate the categorization of official documents (Aadhar, PAN, Licenses), reducing manual processing time. Utilized ML algorithms (SVM, CNNs) for classification.
- Designed a Grievance Redressal Portal for the Telangana government's MeeSeva service, enabling citizens to file complaints and track resolution progress. Built using Django (frontend), and Java (backend).
- Collaborated with a team of 10 engineers and deployed the grievance portal for public use, later scaled and upgraded by the government for broader implementation.

PROJECTS

NSemble: Web Application
- Created Donations Platform: Conceptualized and built NSemble, a dynamic web application. Integrated front-end technology React, coupled with a robust back-end constructed in Java and powered by MongoDB.
- Empowering User Philanthropy: Built a user-friendly interface leveraging React enabling users to contribute funds or resources to various NGOs. The platform facilitated seamless connections between donors and NGOs.

Facial Recognition Cloud Application
- Designed scalable, multi-tier AI-powered facial recognition application hosted on AWS, using resources such as Amazon S3, SQS, EC2, AWS Lambda.
- Designed an event-driven pipeline on an application tier enabling identity verification from video frames.
- Optimized infrastructure stability, designing a web-tier to handle 130 requests per minute, minimizing latency.
