EDUCATION

Texas Tech University- **Lubbock, TX**
*Bachelor of Science in Computer Engineering (Systems and Software Focus) - **GPA 3.8/4.0*** *Expected May 2027*

- **Relevant Courses:** Data Structures and Algorithms, Object-Oriented Programming, Linear Algebra, Discrete Computational Structures, Modern Digital Systems Design, Probability and Statistics.

Columbia University (Online) Certificate in Machine Learning **Completion: Aug 2025**

SKILLS

Languages and Frameworks: C, C++, Swift, Objective-C, Python, Java, JavaScript, TypeScript, Go
Core Skills: Algorithms, Data Structures, Object-Oriented Programming, Systems Programming, Low-Latency Engineering, Multithreading, Performance Optimization, Debugging, Problem Solving
Tools and Environment: UNIX/Linux, Git, Docker, AWS, MySQL, GitHub Actions (CI/CD), ServiceNow

WORK EXPERIENCE

Sponsors for Educational Opportunity **Remote**
Software Engineering Intern, *June 2025 - Present*

- Completed 300+ hours of full-cycle software engineering training in Python, OOP, data structures, and algorithms.
- Developed and deployed 3 full-stack web apps using React and Flask, improving data retrieval speed by 25% through REST API optimization.
- Implemented SQL data storage and query optimization to improve backend reliability.
- Collaborated using GitHub pull requests, code reviews, and issue tracking to ensure continuous integration across teams.
- Worked with low-level process orchestration and logging mechanisms to improve reliability and fault isolation across distributed systems.

Pasoma, **Remote**
AI DevOps Intern - Pasoma *July 2025 - October 2025*

- Engineered distributed automation agents that orchestrated 100+ real-time deployments across AWS and Azure, reducing downtime by 20%.
- Integrated predictive scaling and auto-healing across AWS and Azure infrastructure.
- Applied latency profiling and optimization across distributed systems to enhance reliability and speed.
- Designed and integrated REST APIs that automated over 40% of reporting workflows, saving ~100 staff hours monthly and improving data accuracy.
- Optimized model-deployment daemons for real-time inference routing and performance monitoring across cloud and on-device environments.

Texas Tech University IT Help Central, **Lubbock, Texas**
Software and Systems Automation Assistant, *January 2024 - Present*

- Engineered backend automation workflows in ServiceNow to process 5K+ daily records with improved reliability.
- Designed test suites for regression testing using ATF; improved code coverage and deployment stability.
- Automated performance metrics collection using UNIX scripts to monitor system throughput and latency.
- Developed an Advanced Work Assignment (AWA) feature in ServiceNow to automatically route tasks to agents based on skill sets, reducing response times by 30%.

PwC, **Remote**
Technology Consulting Externship, *July 2025 - August 2025*

- Leveraged **data visualization, analytics, and automation** to optimize client workflows during PwC's Technology Consulting Externship.
- Automated 10+ enterprise reporting workflows in Python and Excel, cutting manual labor 30% and enabling faster executive insights for 2 client teams.
- Applied Agile SDLC and debugging workflows to analyze client systems and enhance reliability under tight timelines.

University of Chicago Trading Competition, **Remote**
Quantitative Trader and Market Maker, *February 2025 - April 2025*

- Designed and implemented algorithmic trading strategies in Python using real-time market data.
- Developed auto-hedging logic that reduced simulated risk exposure by 15%.
- Collaborated with a team of engineers and quants to refine models under tight performance constraints.

PROJECTS

CodeClash, *September 2025*
HackWest-TX - Github **JavaScript/React.js,Flask, Websockets**

- Built a real-time competitive coding platform where players solve algorithmic challenges head-to-head.
- Collaborated with 4-person team; featured at MLH AI Roadshow 2025 (Top 3 demo).
- Achieved 2nd place at HackWest-TX 2025 out of 70+ teams.
- Developed algorithmic scoring logic and state machines to manage simultaneous active sessions effectively.

IntelliSpeech, *July 2025*
AI Voice Collaboration Platform - Github **JavaScript/React.js, SQLAlchemy**

- Developed a real-time AI communication system with efficient data streaming and multi-threaded processing.
- Integrated unit testing, CI/CD, and failure recovery for reliability in production environments.
- Collaborated with 4-person team; featured at MLH AI Roadshow 2025 (Top 3 demo).
