

Vijay Gattamaneni Data Engineer

✉ vijay@myworkmails.com ☎ (913) 303-1015 📍 Dallas, TX in LinkedIn

Profile

Data Engineer with 4+ years of experience designing and implementing robust data infrastructure solutions. Proficient in ETL processes, data workflows, Python, SQL, and Apache Spark. proficient in translating business requirements into scalable data solutions. Skilled in managing end-to-end data pipeline workflows and enhancing data quality using Hadoop, Apache Kafka, AWS, and Azure.

Skills

Languages: (Python, R, SQL, T/SQL, PL/SQL, JavaScript, VBA)

Datastores and Cloud: (AWS, GCP, Docker, MySQL, MongoDB, PostgreSQL, Oracle, MS SQL Server, DynamoDB, MS Access, Neo4j, Apache Kafka, Kubernetes, Snowflake, Data Bricks, Data Pipeline, Apache Sqoop, Airflow)

Frameworks/Libraries: (Pandas, Pytest, Numpy, OpenCV, REST APIS, Matplotlib, Seaborn, Tensorflow, Keras, Flask, PySpark, Airflow, ETL, Sklearn, NLTK, SpaCy, Genism, PySpark)

Others: (Hadoop, MapReduce, HDFS, Spark, Tableau, MS Power BI, Alteryx, Airflow, Advanced Excel (VBA, Pivot tables, Macros), Git, GitHub, Jira, Agile, HTML, CSS, Google Analytics, Scrum, Apache Nifi, SSAS, SPSS, SSRS)

Education

Master of Science, *Southern New Hampshire University*
Information Technology

01/2020 – 12/2021 | Manchester, USA

Bachelor of TEchnology, *JNTUK*
Electronics and Communication Engineering

07/2014 – 04/2019 | AP, India

Professional Experience

Data Engineer, *McKinsey*

03/2022 – present | Remote, USA

- Orchestrated collaboration with business partners and senior designers to capture requirements and translate them into efficient ETL workflows using SparkSQL and PySpark.
- Led ETL framework development for on-premise data migration (Hadoop, Oracle to AWS) using Apache Airflow, Sqoop, and PySpark. Successfully migrated 500+ tables to S3 storage.
- Implemented data ingestion best practices, ensuring accuracy for internal and external feeds, and managed pipeline metadata and warehouse standards for future application development.
- Engineered the release, integration, and customization of Airflow for a 25+ person analytics team. Automated DAG generation based on source systems, optimizing data extraction using Sqoop and DMS.
- Currently steering the setup of an AWS Data Pipeline to ingest data from Spark and migrate it to Snowflake Database, showcasing prowess in cloud-based data solutions.
- Provided pivotal ad-hoc report metrics and dashboards using Tableau and Confidential tools. Designed a library for emailing executive reports from Tableau REST API, incorporating Python, Kubernetes, Git, AWS CodeBuild, and Airflow.
- Leading the development of an Enterprise data dictionary and metadata tool using React, Redux, Neo4j, Flask, and Elasticsearch, transforming how organizations comprehend and utilize their data.

Big Data Engineer, *Civis Analytics*

09/2020 – 12/2021 | Remote, USA

- Spearheaded the development of fault-tolerant big data applications in the Fraud Analytics team, utilizing 837P EDI Files and NPPES healthcare data to identify and flag potentially fraudulent claims.
- Engineered automated ETL processes, reducing query response time by 50% and streamlining data provisioning, resulting in enhanced operational efficiency.
- Architected scalable data pipelines using SparkSQL and Pyspark for the Business Partners Analytical Platform, automating reporting dashboards and contributing to data-driven decision-making.
- Implemented Spark Streaming with Kafka Consumer for Claims data, optimizing Spark Jobs to ensure efficient cluster utilization.
- Executed Continuous Integration and Delivery to Databricks via AWS DevOps, defining robust build and release pipelines for seamless application deployment.

- Crafted sensitive dashboards for senior management, providing strategic reporting for Renewal Rate, Match back Reporting, Employee KPIs, and Customer Demographics. Proactively identified and resolved data integration issues, ensuring uninterrupted data flow.

Data Analyst, Genpact

01/2019 – 12/2019 | Bangalore, India

- Designed and executed a data-driven email campaign in Salesforce, boosting lead to enrollment conversion by an impressive 15%.
- Conducted A/B tests, meticulously analyzing campaign performance across diverse customer segments to refine strategies.
- Collaborated with data engineering and marketing operations teams, optimizing ETL processes and crafting SQL queries for precise data extraction.
- Customized workflows using SFDC standard objects, contributing to streamlined processes and enhanced data visibility.
- Played a key role in collaborative code reviews, issue resolution, and continuous deployment processes to improve overall efficiency.
- Utilized Tableau to create impactful word clouds, monitoring and addressing popular queries over time for strategic decision-making.

Certificates

- AWS Certified Solutions Architect Associate

Projects

Automated Credit Risk Assessment System

01/2020 – 04/2020

- Developed the Automated Credit Risk Assessment System for a financial institution.
- Utilized historical transaction data, credit scores, and external economic indicators to build predictive models for assessing credit risk.
- Engineered data pipelines and ETL processes to handle the ingestion, transformation, and storage of large-scale financial data. Integrated the system with the institution's loan processing platform, reducing the time taken to assess credit risk for loan applications by 40%.
- Ensured compliance with regulatory guidelines and data security standards to maintain data privacy and integrity.

Cost Optimization Program Changing the Source System Scope

- Working on converting CIF source data into XML and with help of MDM loading into Oracle.
- Analyzing requirements and providing work effort estimates Identifying & implementing corrective measures based on gathered metrics.
- Developing reusable code, providing test cases with results and proper reconciliation between CIF and MDM.
- Supporting production for maintaining applications in NABI project for 1week once in 3 months.
