

AADITYA CHAUDHARI

San Francisco Bay Area, CA (Open to relocation) | aadityac.tech@gmail.com | 408-662-3025

SUMMARY

- Product Manager** with **5+ years** of technical experience in **Fintech Payments, Enterprise solutions, and E-Commerce**, as well as proven expertise in managing end-to-end product lifecycles across **Data Center technologies, Networking, B2B SaaS** and **Developer Tools**.
- Partnering with **cross-functional teams** (engineering, UX/UI design, and marketing) to deliver **real-time software applications** and **build 0-1 products**.
- Robust in defining **technical product requirements**, directing **Agile development processes** (Scrum, Kanban), and improving system efficiency through **AWS cloud infrastructure, CI/CD pipelines, and Generative AI**.
- Experienced in identifying customer needs using **data-driven insights, A/B testing** and **conducting user interviews**.
- Making **PRDs, GTM strategies, and product roadmaps** for efficient product delivery.
- Strong technical background in **Data Analysis, microservices architecture, cloud infrastructure, and API integrations**.

SKILLS

Product Management: Roadmap planning, PDLC, Data Analysis, Stakeholder management, User interviews, GTM strategy, and Customer journey mapping.

Certifications: CSPO, PMP

Agile Methodologies: Sprint planning, Scrum, Kanban, Backlog prioritization

Technical Skills: Python, Java, R, JavaScript, SQL, RESTful APIs, Microservices, CI/CD pipelines, Gen AI (GPT, DALL·E).

Tools: Jira, Trello, Excel (Advanced), Tableau, Google Analytics, SharePoint, Figma, Miro, Git, Power BI, AWS, Google Cloud, TerraForm

User Experience (UX): Wireframing, A/B testing, Prototyping, User journey mapping

ML: Deep Learning, Scikit Learn, TensorFlow, Keras, PyTorch

WORK EXPERIENCE

T-Mobile	San Francisco, CA
Technical Product Manager	June 2024 - Present
- Defined and executed Go-To-Market (GTM) strategies aligned with product vision, incorporating detailed user feedback to optimize KPIs, including model accuracy and CSAT. - Spearheaded integration and fine-tuning of Generative AI (LLM) models into customer service platforms, resulting in a 20% improvement in response relevance and latency reduction. - Drove end-to-end product development, collaborating closely with engineering, design, DevOps, and operations teams to deliver scalable AI-driven features using Terraform, Crossplane, and cloud technologies (AWS). - Led cross-functional syncs to align roadmap priorities, streamline deployments, and track performance metrics using JIRA, Confluence, and Amplitude tools. - Established feedback loops with customer support and QA teams to iterate on product enhancements, increasing adoption of AI features by frontline agents.	
CoreVest Finance	Irvine, CA
Technical Product Manager	May 2023 – August 2023
- Led and integrated ML-based solutions to enhance customer service workflows, improving agent response time and accuracy through predictive routing. - Conducted data-driven analysis of customer interactions using SQL and Tableau, surfacing actionable insights that influenced feature prioritization. - Streamlined PRDs by automating performance reporting with Python, enabling faster feedback cycles and stakeholder transparency. - Partnered with data science, DevOps, and engineering teams to translate business needs into technical solutions, ensuring high model performance. - Interact with data science teams regularly and work on the efficiency of data using AWS.	
California State University, Fullerton	Fullerton, CA
Research Manager	Jan 2023 - May 2024
- Designed curriculum roadmaps and prioritized features to enhance the learning experience, leading to a 25% increase in student outcomes. - Structured student journeys in coding labs using data-driven insights, improving engagement across the board. - Handled California and NY teams by defining product strategy for the FPGA bitstreams project and published on IEEE. - Coordinated with faculty members to optimize teaching methods through A/B testing and Data Analysis, ensuring the curriculum aligned with learning goals.	
Ascensus	Vadodara, India
Technical Product Manager	Jun 2019 - Jun 2022
- Collaborated with engineering, DevOps, design, and business teams to define the end-to-end product lifecycle for B2B SaaS trading solutions, delivering a scalable FX Payments platform that increased transaction efficiency by 40%. - Managed the end-to-end PDLC, from ideation to post-launch, focusing on delivering timely and high-impact features through PRDs and product roadmaps. - Supervised product backlogs and prioritized tasks of Agile methodologies (Scrum, Kanban) using Jira, ensuring seamless coordination with dev teams. - Engaged with engineering and DevOps to implement API integrations, 0-1 GTM product strategy, compliance standards (GDPR, COPPA, PCI-DSS), and microservices architecture, improving product reliability and scalability by 30% using Terraform, Crossplane, and cloud technologies (AWS). - Conducted market research, competitor analysis, and user feedback collection to iterate and improve product offerings while driving data-driven decisions. - Oversaw A/B testing with Data Analytics tools using Tableau and Power BI, leading to a 35% rise in user engagement and satisfaction.	

PROJECTS

- Plant Disease Classification**
 - Managed **the product lifecycle** for an agricultural application, from concept to launch, addressing user needs for disease detection with a **97% accuracy** rate using **CNN** and **TensorFlow**.
 - Delivered a fully functional **Android app**, incorporating **user feedback** to enhance accessibility for farmers while driving feature prioritization and making strategic decisions to optimize the disease classification tool for better usability and performance.
 - Worked with stakeholders to ensure the app met user requirements while facilitating real-time updates based on performance data.
- Movie Dataset Analysis using Hadoop**
 - Directed the **roadmap** and execution of a large-scale data analysis project on **AWS**, improving data accuracy by **50%** while reducing errors by **30%**.
 - Engaged with business stakeholders to define key objectives, ensuring the **data models** aligned with market research and user insights.
 - Integrated continuous feedback from users to refine the data pipeline and enhance data quality and the speed of the project’s delivery.

EDUCATION

California State University, Fullerton	Fullerton, CA
<i>Master of Science in Computer Science</i>	GPA – 3.7/4.0
Gujarat Technological University	Vadodara, India
<i>Bachelor of Engineering in Computer Science</i>	GPA – 8.72/10.0
