EDUCATION

M.S (Computer and Information Science)	IUPUI – Indianapolis Campus	Dec 2021
B.E (Electronics and Instrumentation)	Sastra University	May 2016
	GPA: 7.1 / 10	

SOFTWARE SKILLS

Java, Python, Pega 7.1, C, C++, Selenium Automation, Erwin Data modeler, MySQL, SQL Developer, Squirrel SQL Client, Google Analytics, SOAP UI and REST API, MS Office tools.

SOFTWARE CERTIFICATIONS

Pega 7 Fundamentals - Pegasus

ISTQB foundation level - International Software Testing Qualifications Board certified tester

Certified Selenium Professional - Vskills Government certification

COURSE WORK

M.S. Computer Science – Database Systems, Big Data Analytics, Object Oriented Design, Computer Vision, Software Quality Assurance

WORK EXPERIENCE

Software Systems Engineer - Tata Consultancy Services.

Jun 2016 to Sep 2019 (3 Yrs, 3 months)

PEGA - Business Process Management

- Tested applications using Pega Tracer tool to show software transparency after migration from PEGA 7.0 to 7.1.
- Selenium to automate all BAU UI flows across various RTLs (Route to Live) of TalkTalk Telecom projects in a waterfall environment
- Performed database backend testing by field level validation on MySQL.
- Tested Codes in various PRPC activities, tracer tools, flow actions, assignments, SLA Service Level Agreement, declarative rules, decisioning portal (Next Best Action)
- Analyzed the integrated system of Pega and Chordiant CRM for the telecom order placement through Pega for new customers.
- Used Team Foundation Server and JIRA to maintain test metrics.
- Worked on different projects across various Pega RTLs(Route-To-Live) – BPM, CCS, DEC

Software Testing – Online Sales and Servicing

- Measured the number of fallouts from web pages with Google Analytics and suggested solutions to Business Analysts to reduce the fallout rate.
- Performed Manual and Selenium automated testing in an Agile environment
- Prepared Requirement Traceability Matrix (RTM) for high level test coverage and effectiveness by collaborating with stakeholders through scrum meetings.
- Created test plans, executed software tests and managed defects through Team Foundation Server TFS application, JIRA.
- Performed cross-browser testing across Chrome, Internet explorer, Firefox, Safari and performed mobile app testing
- Attended daily scrum meetings and

BSS Functional Testing – Trio and Chordiant CRM:

- Specialized in TELECOM domain BSS (Business System Support).
- Designed and executed CRM End to End testing UAT – User Acceptance
- Automated the CRM backend telecom provisioning processes and effectively reduced the test execution from 7 weeks to 5 weeks.
- Created and tested billing and invoicing tools for customer data using Singl.eView software, performed integrated testing of singl.eView, CRM and Pega platforms.
- Mastered Bugzilla and SPIRA for defect lifecycle management.
- Tested Web Services/ API / REST services using SOAP UI

ENGINEERING PROJECT EXPERIENCE

Database Design and Implementation for an Employee Application (Erwin Data Modeler)

Jan 2020 to Present

- Designed relational database, tables and views for an employee application using the Erwin Data Modeler.
- Translated the model into relational schema for an employee management system
- Optimized query performance and determined functional dependencies
- Created T-SQL objects to maintain integrity across databases in the server.

Design and implementation of Online Stores portal using JAVA

Jan 2020 to Present

- Designed UML for the entities and relationships determined from the enterprise statement
- Used Model-View-Controller domain model with the RMI along with various design patterns for implementation
- Loaded data into the relational schema in SSMS tool, established database interaction to the application.

Face Generation and clustering using Generative Adversarial Networks

Feb 2020 to Present

- Trained a Deep Convolution Generative Adversarial Network (DCGAN) model with a dataset consisting of face attributes of celebrities
- Implemented the Classification and Prediction technique to differentiate the faces based on attributes and generated non existing life like faces
- Clustered faces according to feature attributes using K-Means clustering.

INTERNSHIP EXPERIENCE

Madras Atomic Power Station – Kalpakkam, India

May 2015 to Jun 2015

- Studied the Plant Information System (PIS) and its integration with the software systems.
- Assisted with upgrading PIS software and gained knowledge on the 3-tier architecture of PIS software.
- Worked on CTMLS Scanner application for CTM Logger System which performs basic acquisition of data and sets the digital output.
- Performed quality assurance activities with the client server up and readings of database from SQL.
