

# AASHKA DESAI

+1-(585)290-2652 |  ceaashkadesai@gmail.com |  linkedin.com/in/aashkadesai16

## Professional Summary

**Software Engineer** with expertise in designing scalable ETL pipelines, optimizing SQL queries, and automating data workflows. Skilled in cloud-based data warehousing, distributed processing, and infrastructure automation using AWS, PostgreSQL, and Snowflake. Focused on improving data reliability, security, and performance in high-volume systems.

## Technical Skills

**Languages & Data Tools:** Python (Pandas, NumPy), SQL, Excel (Pivot Tables, VLOOKUP), Google Sheets  
**Visualization & BI Tools:** Power BI, Tableau, Looker  
**Cloud Platforms:** AWS (S3, Lambda, Redshift), Docker, Jenkins  
**Databases:** PostgreSQL, MongoDB, MySQL, Redis  
**ETL & Data Processing:** Airflow, FastAPI, Flask, Data Cleaning, Data Profiling, KPI Definition  
**DevOps & Versioning:** GitHub, GitLab, GitHub Actions  
**Project Management:** Jira, Confluence, Agile/Scrum Methodologies

## Experience

**Nature Counter by CrowdDoing** | *Node.js, MongoDB, Firebase Auth, Docker* **Feb. 2025 – Present**  
*Software Engineer* *Remote*

- Setting up MongoDB time-series collections to streamline data tracking and analytical reporting.
- Developing API-driven data workflows to automate data ingestion, processing, and secure storage.

**Rochester Institute of Technology** | *Python, FastAPI, REST API, Django, Docker* **Aug. 2023 – Dec. 2024**  
*Web Developer* *Rochester, NY*

- Optimized ETL pipelines for PostgreSQL data processing, reducing query execution time by 35%.
- Automated data validation and cleansing using Python and SQL, improving data integrity by 40%.
- Implemented AWS Lambda for real-time data ingestion, reducing batch processing time.
- Streamlined API-driven data workflows, enhancing system reliability and scalability.

**ZYMR, Inc.** | *Java, SpringBoot, AWS, Kubernetes, Jenkins, Postman* **Aug. 2021 – May 2022**  
*Software Engineer - Dev* *Ahmedabad, India*

- Engineered ETL pipelines using SQL and AWS Redshift, reducing data processing time by 30%.
- Fine-tuned PostgreSQL queries, improving report generation speed by 25%.
- Integrated AWS Lambda for serverless data processing, ensuring real-time analytics.
- Implemented data encryption and security measures, maintaining compliance with financial regulations.

**SoftVan Pvt. Ltd** | *SQL, AWS, Python* **Jan. 2021 – Jun. 2021**  
*Software Developer Intern* *Ahmedabad, India*

- Optimized PostgreSQL queries and indexing strategies, reducing query execution time by 40%.
- Automated data migration to AWS Redshift, cutting transfer time by 30% for large datasets.

## Education

**Rochester Institute of Technology**, Rochester, NY **Aug. 2022 – Dec. 2024**  
M.S in Computer Science | GPA : 3.64/4.00 | Teaching Assistant: Engineering Secure Software  
**Gujarat Technological University**, Ahmedabad, India **Jun. 2017 – May 2021**  
B.Tech Computer Engineering | GPA : 9.48/10.00

## Projects

**AutoLedger: Blockchain-Powered Vehicle Management** | *Python, SQL, PostgreSQL, Blockchain, Data Pipelines*

- Improved data consistency by 40% by developing ETL pipelines to process vehicle transaction data.
- Enhanced SQL queries and indexing for blockchain-stored data, reducing retrieval time by 30%.
- Automated data validation for Ethereum transactions, enhancing security and fraud detection.

**NYC Crash Data Mining and Visualization** | *Python, SQL, Pandas, NumPy, Folium, AWS*

- Improved data quality by 35% by building ETL pipelines to preprocess 1M+ NYC accident records.
- Implemented geospatial data analysis using Folium and Matplotlib, generating heatmaps of accident hotspots, optimizing traffic management insights for high-risk zones.
- Performed SQL-based data aggregation and querying, extracting borough-specific insights and reducing query execution time by 40% through index optimization.

**Yelp Data Analysis** | *SQL, AWS Lambda, Redshift, Python, Data Warehousing*

- Designed and optimized SQL queries and ETL pipelines, improving data processing efficiency by 37%.
- Processed 18M+ records using AWS Lambda and Redshift, automating data ingestion workflows.
- Developed a relational data model for Yelp business insights, streamlining data accessibility by 50%.
