SUMMARY

Data Analyst with dual Master's degrees in Data Science and Technology Management and 3+ years of experience in analytics and business intelligence. Proficient in SQL, Python, R, and Excel for data extraction, transformation, and statistical analysis. Skilled in developing dashboards and KPI reports with Tableau and Power BI to support data-driven decision-making. Experienced in cloud analytics and workflow automation using AWS, Airflow, and dbt, with applications in forecasting, risk evaluation, and customer analytics.

EDUCATION

Rutgers University, New Brunswick, New Jersey, USA

Master of Science in Data Science - Statistics, GPA 3.55

08/2023 – 05/2025

NMIMS University, Mumbai, India

Master of Business Administration in Technology Management, GPA 3.59

07/2021 – 05/2022

Mukesh Patel School of Technology Management & Engineering, Mumbai, India

Bachelor of Technology in Information Technology, GPA 3.59

07/2017 – 05/2021

PROFESSIONAL EXPERIENCE

ANG InfoTech LLC - New Jersey, USA

07/2024 – Present

Software Engineer

- Built and automated ETL workflows in MySQL and HDFS, increasing data throughput by 40% and improving availability of datasets.
- Designed and maintained Tableau dashboards tracking KPIs, enabling cross-functional teams to monitor operations in real time.
- Performed exploratory data analysis and forecasting with Python, improving simulation accuracy by 30% for business planning.
- Applied predictive modelling on 10K+ records to reduce decision latency by 30%, supporting faster and more accurate reporting.

Deloitte Touche Tohmatsu Limited - Bangalore, India

06/2022 – 08/2023

Associate Solution Analyst

- Conducted risk assessments and data validation on financial and operational datasets using SQL and Python, improving audit accuracy and efficiency by 45% across business units and strengthening decision support for auditors.
- Optimized data processing workflows, reducing report generation time by 20% while increasing consistency of financial insights.
- Designed Tableau dashboards to visualize audit KPIs, reducing reporting time by 40% and improving visibility of compliance findings.
- Collaborated with business stakeholders to ensure analytics adhered to SOX, GDPR, and regulatory standards.

KEY PROJECTS

MEDIRISK-AI – Clinical Risk Prediction Platform [\[Link\]](#)

- Executed data cleaning, feature engineering, and model training (Logistic Regression, LightGBM, CatBoost) on the UCI heart disease dataset (300+ patient records, 14 features), applying calibration techniques to deliver reliable and interpretable risk predictions.
- Implemented an interactive Streamlit dashboard offering single/batch predictions, SHAP-based explanations, decision curve analysis, and subgroup performance metrics, enabling clinicians to explore model outputs and support evidence-based decision-making.

NewsVision – Personalized News Recommender System [\[Link\]](#)

- Achieved 91.2% Recall@5 on real-time news recommendations by applying a hybrid model with Sentence-BERT and SVD.
- Delivered a Flask API with Redis caching on AWS EC2 + NGINX, cutting API response times by 40% and scaling to 1K+ daily users.

LoanRisX - Machine Learning-Based Credit Evaluation [\[Link\]](#)

- Reached ROC AUC of 0.864 using XGBoost with automated feature selection (RFE, SHAP), enabling accurate loan default prediction.
- Deployed a serverless credit scoring API on AWS Lambda, reducing approval latency by 50% and supporting high-throughput flows.

QueryCraft - Conversion of Natural Language Questions to Schema-Specific SQL Queries

- Increased query generation accuracy by 35% with transformer-based models (BART, T5) validated on 80K+ WikiSQL queries.
- Enhanced semantic mapping with spaCy + MiniLM classifiers, enabling schema-aware SQL generation for diverse database structures.

CrAlpto - AI-Based Cryptocurrency Analytics with Multi-Model Forecasting [\[Link\]](#)

- Improved forecast accuracy by 18% using LSTM, XGBoost, and hybrid models for real-time cryptocurrency trading signals.
- Established PostgreSQL ETL pipelines with Binance API, reducing latency by 150ms and serving 500+ daily active users.

OncoRisk AI — High-Fidelity Breast Cancer Malignancy Prediction Pipeline with End-to-End Cloud Deployment [\[Link\]](#)

- Attained ROC AUC of 0.9977 on FNA cytology datasets by applying SHAP-based feature selection and LightGBM modelling.
- Implemented full cloud deployment with automated data pipelines, ensuring scalable and reproducible end-to-end predictions.

TECHNICAL SKILLS

Languages & Databases: Python, Java, SQL, C++, R, MongoDB, MySQL, SQL Server, AWS RDS, Oracle SQL

Tools & Frameworks: Scikit-learn, XGBoost, TensorFlow, PyTorch, SHAP, Flask, Docker, Kubernetes, Git, CI/CD

Big Data & Cloud Technologies: Apache Spark, Hadoop, Kafka, AWS (EC2, Lambda, RDS, S3), Apache Airflow

Data Analysis & Visualization: Pandas, NumPy, Seaborn, Plotly, Excel, Power BI, Tableau, Google Analytics
