Professional Summary

Results-driven Data Analyst with hands-on experience in retail analytics, marketing insights, and data visualization. Expert in SQL, Power BI, and Tableau. Proven track record of delivering actionable insights from complex datasets, improving operational performance, and aligning data with business goals. Adept at automating reports, tracking KPIs, and presenting data clearly to stakeholders.

Education

University of Cincinnati, OH

Aug 2018 – Jun 2022

Bachelor of Economics

GPA: 3.03

Professional Experience

Data Analyst

Jun 2023 – Present

Mars Wrigley, New York, NY

- Analyzed retail sales and shopper behavior data to optimize category strategies and improve shelf placement.
- Maintained planograms using Nielsen Spaceman, resulting in a 12% boost in in-store visibility.
- Automated weekly Power BI reports, reducing manual reporting time by 30%.
- Partnered cross-functionally to align data strategies with sales, supply chain, and marketing goals.

Marketing Analyst

Jul 2022 – Jun 2023

CGI Digital, New York, NY

- Conducted segmentation analysis that increased campaign engagement by 18%.
- Automated SQL and Excel reports, improving data delivery time by 20%.
- Led cross-departmental analysis that reduced operational costs by 10%.
- Delivered strategic insights to guide targeted advertising and improve customer acquisition.

Data Analyst Intern

Mar 2022 – Jun 2022

Epsilon AI Institute, New York, NY

- Cleaned, transformed, and validated large sales datasets using Power Query and Excel.
- Built dashboards in Tableau and Power BI to monitor sales and marketing KPIs.
- Supported business users with insights for performance tracking and forecasting.

Projects

E-commerce Dashboard @ Baufra Inc.

- Collected and cleaned raw sales data from multiple sources.
- Built a scalable Power BI model using Power Query.
- Designed interactive dashboards showing product performance, sales trends, and regional breakdowns.

Sales Insights Dashboard – Global Superstore

- Analyzed 10K+ records of sales and customer data from a global retail store.

- Designed Power BI dashboard visualizing regional profit, customer segments, and product performance.
- Used DAX to calculate KPIs like profit margin, sales/customer, and region share.
- Recommended improvements to inventory and discount strategy based on underperforming areas.
