

Abdul Nausheed Khan Shaik Software Engineer Location: FL Mobile: 301-244-8482 Email: abdulshaik4903@gmail.com	
SUMMARY Software Engineer with 4+ years of experience in designing, developing, and deploying scalable full-stack web applications using Spring Boot, Java, and microservices architecture. Proficient in building secure, high-performance systems with Spring Security, OAuth2, and Hibernate, achieving up to 35% improvement in query response times and 20% faster deployment cycles. Expertise in developing RESTful APIs, integrating CI/CD pipelines with Jenkins, Docker, and Kubernetes, and leveraging AWS services (DynamoDB, S3, EKS) to enhance system scalability and efficiency. Skilled in front-end development using Angular, React.js, HTML5, CSS, and Bootstrap to deliver responsive, user-friendly interfaces.	
SKILLS Methodology: SDLC, Agile, Waterfall Languages: Core Java, Java, C/C++, Python, R, HTML5, CSS, JavaScript, Typescript Frameworks: Spring MVC, Spring Boot, Spring Security, Microservices, JSF, Hibernate, JPA, ReactJS, NodeJS, ExpressJS IDEs: NetBeans, IntelliJ IDEA J2EE Technologies: Servlets, JSP, JSTL, JavaBeans, JDBC Package & Tools: NumPy, Pandas, Web2py, CherryPy Web Technologies: HTML, CSS, Bootstrap, jQuery, Ajax, JSON, XML Cloud Technologies: AWS Application Server: Apache Tomcat, WebSphere Databases: MongoDB, MySQL, NoSQL Build /Other tools: UML, MS Visio, Maven, Gradle, Jenkins, Junit Version Control Tools: Git, GitHub Operating Systems: Windows, Linux	
EXPERIENCE DXC Technology, NJ July 2024 – Present Software Engineer Designed and developed a scalable web application using Spring Boot and Microservices architecture, improving system modularity and reducing deployment time by 20% for a financial client. Implemented secure user authentication and authorization mechanisms using Spring Security, ensuring compliance with enterprise-level security standards. Utilized Java and Hibernate to optimize database interactions, reducing query response time by 15% for a high-traffic customer portal. Integrated Jenkins and Maven into the CI/CD pipeline, automating build and deployment processes, which enhanced team productivity by streamlining release cycles. Developed responsive front-end interfaces using HTML5, CSS, and Bootstrap, improving user experience across devices for a healthcare application. Collaborated with cross-functional teams using Agile methodology, participating in daily stand-ups and sprint planning to deliver features on time. Managed version control using Git and GitHub, ensuring seamless code integration and maintaining clean, conflict-free repositories for team projects. MUFG Bank (Cognizant) Oct 2021 – Dec 2022 Software Engineer Engineered distributed systems with Java 11 microservices architecture, utilizing AWS DynamoDB for storage solutions while implementing data structures that improved transaction processing time by more than 40 milliseconds on average. Developed robust RESTful APIs using Spring Boot and Spring MVC, enabling seamless communication across 15+ internal applications with sub-200ms transaction time, and optimized SQL data pipelines through query tuning, indexing, and schema enhancements, reducing query execution time by 35%. Developed enterprise-grade full-stack applications leveraging Angular 12, and AWS S3, achieving a 40% improvement in workflows and shortened issue resolution time from 3 days to 20 hours. Led Agile practices, refining 50+ user stories in JIRA for effective communication, collaborating with cross-functional teams, including Product Managers and stakeholders, to align technical solutions with business goals, and reducing software development life cycle time. Mentored junior engineers through code reviews and knowledge-sharing, improving best coding practices, and reducing recurring issues by 22%. Automated deployments through Docker, Jenkins, and DevOps pipelines, boosting deployment frequency by 40% and cut production failures by 25%. Ensured code quality through unit testing with JUnit and Mockito while managing version control with Git and securing access with IAM and OAuth2. JPMC (TCS) May 2019 – Oct 2021 Software Engineer Built responsive web and distributed storage applications with Spring Boot and React.js, deployed on AWS EKS, ensuring cross-platform functionality and boosting backend efficiency by 20% through microservices architecture. Improved data proficiency by 38% using Hibernate, Spring Data JPA for efficient data retrieval, and refined backend integration. Implemented end-to-end applications with containerized CI/CD pipelines with Docker, Kubernetes, AWS DevOps, decreasing build times by 65%. Configured Apache Kafka for microservices integration, streamlining data flow and asynchronous messaging, boosting scalability, and minimizing processing latency by 24%. Enhanced code quality by 35% through comprehensive unit and integration test suites using JUnit, Selenium, and Cucumber within a Test-Driven Development, achieving 98% code coverage and ensuring early defect detection through close collaboration with the QA team. Designed robust security protocols employing Spring Security and OAuth2, while optimizing SQL queries and indexing strategies in MySQL, improving application performance by 30% and improving customer service and user satisfaction.	
EDUCATION Master of Science in Computer Science University of Florida, Gainesville, Florida Dec 2024	
CERTIFICATIONS AWS Certified Developer - Associate (DVA-C02)
