## EDUCATION

### North American University

Bachelor of Science in Computer Science - GPA: 3.62

Houston, TX

## EXPERIENCE

### Data Analyst Intern

Oct. 2024 – Feb. 2025

Empasoft Solutions

Portland, OR

- Automated pipelines to transform energy market data for forecasting and cost analysis.
- Created forecasting dashboards to support budget planning and resource allocation.
- Identified pricing anomalies that influenced strategic operations and reporting accuracy.

### Systems Support Analyst

Apr. 2024 – Sep. 2024

North American University

Houston, TX

- Configured and deployed campus workstations, ensuring system readiness and role-specific access.
- Resolved hardware, software, and network issues across devices, including IoT peripherals.
- Maintained classroom tech and networking gear, including routers and modems.

### Data Associate

Feb. 2023 – Apr. 2024

North American University

Houston, TX

- Delivered data-driven insights that led to measurable improvements in departmental performance.
- Automated financial and operational reports, improving reporting speed and accuracy by 40%.
- Produced visual reports that helped inform university leadership decisions.

## PROJECTS

### Risk Modeling for Energy Operations | Python, SQL, Excel

- Built a simulation framework to assess hedging strategies for high-load operations using real-world energy pricing.
- Quantified risk reduction and profitability trade-offs across various financial instruments.
- Delivered insights to help high-load operations hedge against market volatility.

### Neumark: ML-Based Lung Cancer Risk Assessment | Flask API, Python, SQL, JavaScript

- Created an accessible tool for early detection risk analysis based on user health inputs.
- Integrated multiple models into a seamless user experience to improve diagnostic accuracy.
- Prioritized usability and performance for real-time risk feedback.

### Energy Cost Optimization for High-Load Operations in ERCOT | Tableau, SQL, Excel, Python

- Analyzed historical market data to optimize operational scheduling for mining rigs.
- Uncovered trends that reduced electricity costs and increased profit margins.
- Modeled digital asset operations to improve ROI and reduce variable energy costs by 15–30%.

## TECHNICAL SKILLS

**Data Analysis & Visualization:** SQL, Python(Pandas, Numpy, Matplotlib), R, Tableau, PowerBI, Excel(Power Apps, Pivot Tables), Jupyter Notebook, Alteryx

**Predictive Modeling & ML:** Regression & Classification, Time Series Forecasting(ARIMA, Prophet), Gradient Boosting(XGBoost, LightGBM), Markov Models, Monte Carlo Simulation, Sensitivity Analysis

**Data Engineering & Automation:** ETL Design, REST API Ingestion, Git, Linux, C++

## CERTIFICATIONS

**Google:** Data Analytics Professional & Advanced Data Analytics Professional

**Microsoft Certified:** Power BI Data Analyst Associate

**Alteryx:** Certified Designer Core

**UPenn Wharton:** Finance and Quantitative Modeling for Analysts
