PROFESSIONAL SUMMARY:-

Results-driven Sr. Cloud/DevOps Engineer with 4 years of hands-on experience delivering secure, scalable, and automated solutions across AWS, Azure, GCP, and hybrid infrastructures—expert in CI/CD, SRE practices, Infrastructure as Code (IaC), container orchestration (Kubernetes, Docker), release engineering, DevSecOps, and enterprise cloud migration strategies.

- Designed and implemented secure, scalable, and compliant multi-cloud infrastructure across AWS, Azure, and GCP environments.
- Developed Infrastructure as Code (IaC) using Terraform, CloudFormation, Pulumi, ARM templates, and Bicep for automated provisioning.
- Built, maintained, and optimized CI/CD pipelines using Jenkins, GitLab CI, Azure DevOps, GitHub Actions, Bamboo, and AWS CodePipeline.
- Containerized applications using Docker and orchestrated with Kubernetes (EKS, AKS, GKE), OpenShift, and Helm for resilient microservices.
- Automated configuration management using Ansible, Puppet, Chef, PowerShell DSC, and Azure DSC for consistent environment setup.
- Integrated robust monitoring and observability using Prometheus, Grafana, ELK Stack, Splunk, Datadog, Dynatrace, and Azure Monitor.
- Applied SRE principles—defining SLIs, SLOs, error budgets—and conducted RCA and post-incident analysis for continuous reliability.
- Managed release governance, version control, code signing, artifact promotion, rollback strategies, and release calendars across global teams.
- Orchestrated cloud-native service deployments using AWS Lambda, S3, RDS, DynamoDB, Azure Functions, Event Grid, and API Gateway.
- Secured cloud infrastructure through IAM policies, RBAC, VPC security, encryption, firewalls, Key Vault, GuardDuty, Macie, and Defender for Cloud.
- Deployed and managed streaming and IoT data pipelines using AWS Kinesis, Azure Event Hubs, Kafka, and edge platforms like Greengrass and IoT Edge.
- Implemented FinOps practices, optimized cloud spend using AWS Cost Explorer, Azure Advisor, and GCP Billing Reports.

TECHNICAL EXPERTISE:-

Bug Tracking Tools	JIRA, Rally, Remedy, Service Now
Versioning Tools	Bitbucket, GitHub, GIT Lab
CI Tools	Jenkins, Bamboo, Azure DevOps
Build Tools	Ant, Maven, Gradle, NPM, NVM
Cloud Technologies	AWS EC2, IAM, S3, CLI, Elastic Search, RDS, GCP
Web/App Servers	WebSphere 5.x/4.x, Web Logic 8.x/7.x, Tomcat 5.x/4.x, JRun, JBoss, Apache
IDE Tools	Net Beans, IntelliJ IDEA, PyCharm, Visual Studio
Web Services	XML, SOAP, WSDL
Static Analysis	Sonarqube, Coverity
Monitoring Tools	Splunk, Dynatrace, Prometheus and Grafana, Cloud watch

Databases	Oracle 8i/9i, DB2, SQL Server, PL/SQL, MongoDB
Languages/Scripting	Shell Scripting, Python, Visual Basic, PL/SQL, HTML
Operating Systems	Linux- Centos, Ubuntu, Debian, Red Hat

EDUCATIONAL DETAILS:-

PROFESSIONAL EXPERIENCE:-

Client: TIAA Financial Services - Charlotte, NC

October 2023 – September 2025

Role: Sr. Cloud/DevOps Engineer

Responsibilities:

- Design and implement scalable, secure, and compliant cloud infrastructure using AWS, Azure, and hybrid cloud architectures.
- Develop and manage Infrastructure as Code (IaC) using Terraform, CloudFormation, and Pulumi for consistent and automated infrastructure provisioning.
- Build, maintain, and optimize CI/CD pipelines using Jenkins, GitLab CI, Azure DevOps, AWS CodePipeline, and related tools to support automated deployments.
- Implement and enforce security best practices including IAM policies, VPC security, encryption, and firewall configurations in compliance with SOX, PCI-DSS, and SOC2 standards.
- Deploy and manage observability tools such as Prometheus, Grafana, ELK Stack, CloudWatch, Datadog, and New Relic for system monitoring and log aggregation.
- Containerize applications using Docker and orchestrate them using Kubernetes (EKS, AKS, GKE) for microservices deployment and management.
- Use Ansible, Puppet, and Chef for configuration management, server automation, and ensuring consistent environments across development and production.
- Design and implement disaster recovery strategies and high availability solutions leveraging cloud-native tools and multi-region architectures.
- Monitor and optimize cloud costs using AWS Cost Explorer, Azure Cost Management, and implement FinOps practices to maintain budget control.
- Collaborate with software development teams to integrate DevOps tools and practices throughout the software development lifecycle.

Environment & Tools: AWS (EC2, S3, Lambda, ECS, CloudFormation), Terraform, Ansible, Jenkins, GitLab, Docker, Kubernetes, Prometheus, Grafana, Python (boto3), OpenShift, Helm, Route 53, GuardDuty, Macie, CloudWatch, Java11,, RedHat, Windows10, AWS,GCP, Debian, Kubernetes, Docker, Maven, Gradle, Ant, Terraform, Puppet, Splunk Nagios, Azure, AngularJS, GIT, JBoss, Maven, Unix, PL/SQL, Bamboo, Jenkins, Sonar, Artifactory, Nexus.

Client: GDIT - Rensselaer, NY

November 2022 – October 2023

Role: Sr. Cloud/DevOps Engineer

Responsibilities:

- Design and manage scalable, secure, and compliant infrastructure using Microsoft Azure, including services like Azure Virtual Network, Azure App Services, and Azure Kubernetes Service (AKS).
- Implement Infrastructure as Code (IaC) using Azure Resource Manager (ARM) templates, Bicep, and Terraform to provision and maintain Azure cloud resources.

- Develop and optimize CI/CD pipelines in Azure DevOps for automated building, testing, scanning, and deployment of applications across multiple environments.
- Deploy and orchestrate containerized workloads using Docker and Azure Kubernetes Service (AKS), ensuring high availability and scalability.
- Monitor application performance and system health using Azure Monitor, Application Insights, Log Analytics, and custom dashboards for proactive incident response.
- Establish and enforce SRE practices including service-level indicators (SLIs), service-level objectives (SLOs), and error budgeting to drive reliability improvements.
- Collaborate with cybersecurity teams to integrate security controls into DevSecOps pipelines using tools like Microsoft Defender for Cloud, SonarQube, and Trivy.
- Configure automated system patching, compliance scanning, and image hardening using Azure Automation and Azure Policy.
- Support and maintain mission-critical government applications by implementing resilient, fault-tolerant architectures and geo-redundancy using Azure Availability Zones and Region Pairs.
- Automate configuration management and environment provisioning using Ansible, PowerShell DSC, and Azure

Environment & Tools: Azure (ADF, SQL, AKS, Resource Groups), Terraform, Ansible, Docker, Kubernetes, Helm, Jenkins, PowerShell, Bash, Python, Azure DevOps, Prometheus, Splunk, Dynatrace, SonarQube, Java 8.0, JUnit, GIT, Bitbucket, Linux, Jenkins, Bamboo, SonarQube, Docker, Nexus, AWS EC2, Kafka, Active Directory, Elastic Search, Shell Scripting, unix, Python, Stash, Maven, Fargate, GCP.

Client: BHP - Hyderabad, India

September 2021 – June 2022

Role: Build and Release Engineer

Responsibilities:

- Oversee the end-to-end build and release lifecycle for enterprise applications and platforms supporting BHP's global mining operations.
- Design and implement CI/CD pipelines using Azure DevOps, Jenkins, or GitLab CI to automate build, test, and deployment workflows across environments.
- Manage version control strategies, branching models, and release tagging using Git, GitFlow, or trunk-based development practices.
- Plan, coordinate, and execute production releases, ensuring alignment with global release calendars, business windows, and change management processes.
- Enforce governance around build quality, code signing, artifact versioning, and release documentation for traceability and compliance.
- Collaborate with development, QA, operations, and cybersecurity teams to validate build readiness and ensure secure release pipelines.
- Configure build tools such as Maven, Gradle, and NPM for compiling, packaging, and dependency resolution of application components.
- Integrate static and dynamic security scanning tools (e.g., SonarQube, Fortify, Snyk) into build pipelines to ensure secure and compliant releases.

Environment & Tools: Windows Server (2003/2008), Chef, Ruby, Jenkins, Python, Flask, Kubernetes, VMware ESXi, RHEL, CentOS, Oracle, MySQL, Teradata, Git, JUnit.
