SUMMARY

Java Developer with hands-on experience building secure, scalable backend applications using Spring Boot, PostgreSQL, and RESTful APIs. Skilled in microservices, authentication systems (JWT, OAuth, TOTP), database design, and layered architecture. Experienced in integrating backend services with frontend clients using modern web technologies.

TECHNICAL SKILLS

Languages: Java (OOP, Collections, Exception Handling), Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring MVC, REST APIs, Spring Data JPA, Hibernate, JWT, OAuth, WebSockets, PostgreSQL, Flask

Frontend: React, Redux Toolkit, HTML5, CSS3, JavaScript, Bootstrap, jQuery

Security: TOTP / 2FA, QR-based authentication, password hashing, role-based access control

Testing & Debugging: Manual API testing, logging, request validation, error handling

Tools / DevOps: Git, Docker (basic), AWS EC2/S3(basic), Linux/Unix, VS Code

Development Practices: Agile/Scrum workflows, feature branching, code reviews, layered architecture

EDUCATION

Harvard University (edX) *CS50's Introduction to Computer Science*

Certificate of Completion, 2024

PROJECTS

SafeChat – Secure Messaging Platform (Java / Spring Boot / React)

- Built RESTful APIs and WebSocket services for real-time messaging
- Implemented JWT authentication, role-based authorization, and TOTP 2FA
- Modeled relational data with Spring Data JPA and PostgreSQL
- Integrated backend services with frontend clients while maintaining clean separation
- Applied Core Java principles, exception handling, logging, and manual API validation

Store Management System – Admin Dashboard (Java / Spring Boot / PostgreSQL)

- Developed RESTful APIs with Spring Web using layered architecture (Controllers, Services, Repositories)
- Designed and executed SQL queries with JdbcTemplate for fine-grained database control
- Implemented Spring Security with role-based access, input validation, and TOTP 2FA via Google Authenticator
- Integrated backend with PostgreSQL using JDBC and environment-based configuration
- Built and tested endpoints with Spring Boot Test and Spring Security Test
- Applied SOLID principles, clean architecture, and exception handling to ensure maintainable code

Workout Planner Web App – AI-Powered Fitness Calendar (Spring Boot / JS)

- Designed backend RESTful APIs for creating, updating, and batch-deleting workouts
- Integrated OpenAI API for personalized workout generation
- Implemented Google OAuth authentication and secure session handling
- Connected backend services to frontend interfaces using JavaScript, jQuery, and Bootstrap
- Debugged APIs using logs, request validation, and manual testing

WORK EXPERIENCE

Freelance Illustrator, Remote

Jun. 2016 - Sept. 2024

- Delivered client projects, managing requirements, revisions, and final delivery
- Developed strong self-directed learning, problem solving, and attention to detail
- Collaborated asynchronously with clients, building skills transferable to remote software teams
