Tampa FL, USA | 813-500-9185 | [akamath27@gmail.com](mailto:akamath27@gmail.com)

---

## Objective

Driven Information Technology and Cybersecurity graduate with a passion for problem-solving and continuous learning. Eager to leverage academic foundation in IT and Cybersecurity to support team efforts and propel career advancement within a dynamic industry landscape.

## Overview

5.5 years of experience in Information Technology and Cybersecurity Intelligence and Information Security at the University of South Florida. Mastered core security functions and knowledge covering Threat Identification and Risk Management.

## Education

### University of South Florida

- *Masters in Cybersecurity Intelligence and Information Security:*  
Fall 2023 graduate  
3.45 GPA
- *Bachelor's in Information Technology:*  
Fall 2021 graduate  
3.54 GPA (cum laude)

## Key Projects

### CompTia Sec+ (SYO-601), August-December 2023:

- Proficient in understanding of Social Engineering techniques such as phishing and Credential Harvesting and how attackers use those techniques to gather critical information from their victims
- Proficient in understanding of penetration testing and vulnerability scanning concepts
- Well-versed with recognizing Risk management best practices and the impact on business
- Proficient in understanding of secure network architecture concepts and systems design
- Proficient in understanding of symmetric and asymmetric key encryptions
- Well-versed in understanding the difference between block ciphers and stream ciphers
- Proficient in understanding different cloud development models such as Infrastructure as a Service (IaaS), Platform as a Service (Paas), and Software as a Service (SaaS)
- Well-versed in understanding the authentication methods such as Time-based-one-time password and HMAC-based-one time password.
- Proficient in understanding Multifactor authentication strategies such as “Something you are”, “Something you have”, and “Something you know”

### Capstone Project (Weather Application, August - December 2021):

Developed a weather application using HTML and CSS. The application allowed users to see weather forecasts based on the current or selected location. These weather forecasts would allow users to select a single day, three day, or weekly forecast. The weather application would get this forecast information from OpenWeatherMap API.

All user information such as usernames, passwords, and previously searched weather forecasts were stored

on Firebase, which is a google web database that enables developers to develop IOS, Android, and Web applications.

The weather application also incorporated Dev Ops by using the Agile development practices, where the product development was broken down into small increments and overall minimized the amount of up-front planning.

### AWS (Pizza vs Hotdog program, October 2020):

Used the “AWS Rekognition” tool to implement a pattern recognition program using Python. The Python code enabled it to recognize a hot dog from random photos. The expected result was to see if the photo was either a hot dog or a pizza, and the code allowed it to clearly differentiate between the two.

## **Skills & Abilities**

- Strong communication skills
- Strong attention to detail while having ability to work independently
- Strong analytical and problem-solving skills
- Proficient in Python, Java, and C along with Object Oriented skills for Python and Java.
- Experienced with SQL
- Well-versed with creating well functioned websites using HTML
- Experienced with using CSS for styling websites.
- Experienced with using Wireshark for capturing packets and filtering IP addresses
- Experienced with the OSI and TCP/IP layers with a great understanding of how they are relevant to Cybersecurity
- Experienced with creating instances in AWS (Cloud computing)
- Proficient with understanding the difference between the Agile and Waterfall methodologies
- Proficient with searching algorithms and graph algorithms in data structures
- Well-versed with the CIA (Confidentiality, Integrity, Availability) triad and how it is very critical in today’s Cyber world
- Mastered a course on robotic process automation and how it relates to artificial intelligence
