SUMMARY

- Around **3.5+ years of experience** as a Data Scientist specializing in designing and applying data experiments and A/B tests.
- Experienced in designing experiments, analyzing results, and optimizing business processes based on data-driven insights enhancing data-driven real estate strategies.
- Professional in property market analysis using advanced analytics and **machine learning** techniques, investment forecasting, and providing insights for real estate investment decisions, leveraging tools like **Python, R, SQL, and Tableau**.
- Expertise in developing **Predictive Modeling** to forecast trends and behaviors, implementing **Business Intelligence** solutions to enhance decision-making, creating comprehensive **Data Mapping** for accurate data integration.
- Proficient in leveraging **AWS** services like **S3 for data storage**, EC2 for scalable computing, and Redshift for data warehousing to support large-scale data analysis and machine learning workflows.
- Engineered the optimization of **cloud-based data processing and analytics** through the utilization of Microsoft Azure services, achieving a 50% reduction in model development time and a 30% improvement in data visualization capabilities.
- Incorporated Generative AI with LLM using Python into **Exploratory Data Analysis**, optimizing trend and pattern identifications for large and complex datasets.

EXPERIENCE

Data Scientist, MetLife, USA

January 2024 - Present

- Developed a data warehouse by gathering all the business data related to doctors, patients, prescriptions, orders, and calls from different sources.
- Established pipeline using Hive (HQL) to retrieve the data from the Hadoop cluster, SQL to retrieve data from the Oracle database, and ETL for data transformation, increased data processing throughput by 20%.
- Derived data from relational databases to perform complex data manipulations and conducted data checks to ensure data quality, and improved accuracy in data manipulations by 15% following data checks.
- Settled predictive models using Decision Tree, Random Forest, Naive Bayes, Logistic Regression, Cluster Analysis, and Neural Networks, enhancing the decision-making accuracy by 10%.
- Implemented data cleaning and ensuring data quality, consistency, and integrity using Pandas, NumPy and SciPy.
- Hands-on experience in importing and exporting data using Relational Database including MySQL, reflecting a reduction of 18% in data transfer time.

Data Scientist, Intex Technologies, India

August 2019 - June 2022

- Built Power BI reports to show KPIs about the business and complete order life cycle from order purchases to order shipments, fetching 15% amendment in decision-making efficiency.
- Applied Supervised Machine Learning Algorithms Logistic Regression, Decision Tree, and Random Forest for the predictive modeling of problems, leading to better predictive capabilities by 10%.
- Transformed business resources and requirements into manageable data formats and analytical models, designing algorithms, building models, developing, data mining, and reporting solutions reflecting 25% reduction in time-to-insight.
- Collaborated with data engineers and operation team to implement ETL process, and optimized SQL queries to perform data extraction to fit the analytical requirements, leading to enhanced scalability of data extraction processes by 11%.
- Experienced in database management and analysis, program evaluation, process optimization, public finance, project management, and economic analysis, leading 100% stakeholder satisfaction.
- Explored and analyzed the customer-specific features using Matplotlib, Seaborn in Python, and dashboards in Tableau, bringing 12% improvement in decision-making efficiency leading to operational improvements.
- Experience and knowledge in provisioning virtual clusters under the AWS cloud that includes services like EC2, S3, and EMR.
- Prepared a machine-learning model for predicting hourly Sales including orders, invoices, and shipments.

SKILLS

Programming Languages: Python, R, SQL

Database Management: MySQL, MS SQL Server, NoSQL (MongoDB), PostgreSQL

Data Science and Machine Learning: Exploratory Data Analysis (EDA), Natural Language Processing (NLP), Regression, Support Vector Machines (SVM), ETL (Extract, Transform and Load), Neural Networks, Time-series analysis, XGBoost

Packages: NumPy, Pandas, Matplotlib, SciPy, ggplot2, Seaborn, Plotly, Scikit-learn, TensorFlow, PyTorch, NLTK, SpaCy

Big Data Technologies: Hadoop, Spark, Kafka, Hive

Cloud Platforms: AWS (S3, EC2, Redshift, RDS, QuickSight), Azure (ADLS, Synapse Analytics), Google Cloud Platform (GCP)

Development Tools: Version Control (Git, GitHub), Docker, Jupyter Notebook, Google Colaboratory, Databricks, Visual Studio Code

Data Visualization Tools: Tableau, Power BI (DAX, Power Query), Microsoft Office, Excel

Agile Methodologies: SDLC, Jira, Scrum

Certifications: Data Science certification by Simplilearn, Google Data Analytics by Coursera

EDUCATION

Master of Science in Data Analytics Engineering

George Mason University, Virginia

August 2022 - May 2024

Bachelor of Technology

VNR Vignana Jyothi Institute of technology, Hyderabad

June 2017 - July 2021

PROJECTS

- **Customer Feedback System and Sentiment Analysis:** Developed an advanced feedback system and sentiment analysis tool leveraging PyTorch and **NLTK** for natural language processing, incorporating LSTM and GRU **deep learning methods**, hosted on **AWS S3 and EC2**, achieving 85% accuracy in sentiment classification.
- **Face Generation using DC-GAN:** Implemented a Face Generation model using DC-GAN in Python, integrating CNN and Batch Normalization techniques; leveraged **TensorFlow** and **Keras** for model development and training, resulting in a 40% reduction in image distortion.
- **Alzheimer Disease Prediction:** Designed a predictive model for Alzheimer's Disease using machine learning algorithms in R programming and Python, incorporating clinical data. Utilized **MySQL for data management** and created **PowerBI** dashboards to visualize 40+ **KPIs**, achieving 92% accuracy in identifying high-risk patients.
