EDUCATION

The University of Texas of Dallas, USA - Masters in Information Technology and Management

Aug 2016 – Present

Coursework: Data Visualization | Agile Project Management | Statistics | Web Analytic

GPA - 3.5

University of Mumbai, India - Bachelors in Information Technology

Aug 2012 – June 2016

ACADEMIC PROJECT

IRIS Dataset - Python

Jan 2017 – Mar 2017

- Worked on Iris dataset for classification of flowers based on their features using Python (Anaconda, Jupyter Notebook, Spyder Notebook)
- Cleaned the data after performing exploratory analysis and data imputations
- Trained the data for classification of flowers using Pandas and Scikit learn (Decision Trees and Random forest classifier) with an accuracy of 90 percent

Flight Delay Analysis & Visualization (Tableau)

Sept 2016 – Nov 2016

- Designed Tableau Dashboard to represent data of airlines, airport, routes and predicted delays
- Created interactive visualization using Grouping, Sorting, Filtering and Dual Axis to get aggregated data
- Performed predictive analysis to determine average arrival/departure delay and best day/best airline to travel
- Visualized 57,145 Flights data which resulted in average delay-17 hours 43 Minutes

Data warehouse model for Airbnb Website (Business Data Warehousing)

Jan 2017 – Mar 2017

- Identified 10 entities for the business process and constructed relationships between them using Erwin data model and SQL server
- Created a Universe Model using SAP Business Objects (Universe Design Tool and Information Design Tool) with SQL Server as the source
- Generated Business Intelligence reports from the universe using Web Intelligence Rich Client
- Used tableau functions like fixed, hierarchy, set, group to build interactive dashboards.

Data Mining /Prediction of causes of Death in San Francisco (SAS)

Jan 2017- Feb 2017

- Spearheaded a team of 5 to perform Sampling and Normalization pre-processing techniques on causes of death, thus reducing data dimensionality and inconsistency by 32%
- Implemented Decision Trees and Logistic Regression machine learning algorithms using SAS Enterprise Miner to classify death records, with Backward Logistic Regression generating the least error rate of 4.1%

Data Management in Microsoft SQL Server

Sept 2016 - Dec 2016

- Developed and updated database in SQL Server after designing the Entity Relationship Diagram
 - Generated triggers for certain transactions to automate the updating of the database
 - Performed database and query optimization by creating index and view for the faster accessing of the data
 - Prepared Forms to add new data, Menus for easy navigation and Reports for analysis all using MS Visio
-

TECHNICAL SKILLS

Programming Languages: R, SQL, Java

Databases: Sybase IQ, IBM DB2, MySQL, Oracle 11g, Microsoft SQL Server 2012 and 2008 with business intelligence tools

Tools: SAS, Tableau, R Studio, Eclipse 4.3, NetBeans 7.4, MS Excel

SDLC: Agile, Waterfall

Statistical Methods: Regression analysis, Hypothesis Testing, analysis of variance, decision analysis

Project Management: MS PowerPoint, MS Word, MS Excel, MS Project Professional

HONORS & ACHIEVEMENTS

- **Officer**, Toastmasters International, USA
- **Vice President**, Student Council, Thakur college of Engineering, India
- **Google Analytics Certified**
- **Google AdWords Certified**
- **Officer**, NATIONAL SERVICE SCHEME(NSS) an Indian government-sponsored public service program conducted by Government of India
- **Paper Presentation**, Published and presented short length paper on Data Mining on Insurance services in the International conference on cloud computing
