

Professional Summary

Data Analyst with 6+ years of experience supporting data classification, metadata management, and enterprise data governance initiatives across healthcare and financial services environments. Strong background in data profiling, data quality validation, and documentation of governed data assets, ensuring accuracy, compliance, and trust in analytical datasets. Experienced in collaborating with data owners, stewards, and governance teams to classify sensitive data, maintain data catalogs, and enforce governance policies. Hands-on expertise with SQL, Python, Tableau, enterprise data platforms, RBAC, and audit-compliant data access, with working knowledge of Collibra and enterprise data catalogs. Proven ability to bridge technical and business teams to deliver well-governed, high-quality data supporting enterprise analytics and decision-making.

Work Experience

Data Analyst | verizon | Dallas, TX | January 2025 – Present

- Performed quantitative analysis on credit portfolios, focusing on data quality control, data profiling, and consistency checks to support risk and reporting needs.
- Designed and developed interactive Tableau dashboards and storyboards to analyze credit portfolio performance and present insights to management.
- Conducted exploratory data analysis to identify data patterns and trends, translating analytical findings into actionable business rules.
- Deployed and maintained MS SQL Server to store, transform, and query data for analytical and reporting purposes.
- Wrote complex T-SQL queries involving multiple joins, subqueries, and common table expressions to aggregate and prepare data for reporting and analysis.
- Performed statistical analysis including t-tests, F-tests, ANOVA, MANOVA, confidence interval estimation, and distribution analysis using R, and generated structured analytical reports using R Markdown.
- Built ETL workflows using SSIS to extract data from internal and external sources such as CSV, JSON, and Excel files, and load cleansed data into relational databases.
- Collected and processed data from multiple sources using Python, loading data into Pandas DataFrames to identify outliers and handle missing values through imputation techniques.
- Used Microsoft Excel to generate summary statistics and leveraged VBA to automate data transformation and reporting tasks.

Data Analyst | Concentrix | Cummings, GA | Sep 2024 – Dec 2024

- Designed and optimized Responsible for building reporting dashboards and performing data mining and analysis to understand customer purchase behaviour and engagement patterns.
- Developed real-time Tableau dashboards to visualize and monitor key business metrics and A/B test performance using both internal and external data sources.
- Collaborated closely with marketing teams to analyse campaign performance through customer segmentation, cohort analysis, and behavioural analysis.
- Designed MySQL table schemas and developed stored procedures to efficiently capture, store, and manage customer purchase and session-level data.
- Queried data from MySQL databases and validated data quality by identifying inconsistencies and anomalies using Python libraries such as Pandas and NumPy.
- Supported enterprise data governance initiatives by profiling, validating, and documenting customer and transaction data assets.
- Assisted in classifying sensitive and regulated data elements, supporting compliance with internal governance and audit standards.
- Identified data quality issues and worked with data owners to drive remediation and standardization efforts.
- Supported data governance documentation and reporting, including data dictionaries and quality metrics.
- Ensured analytical datasets adhered to security and access control policies through role-based permissions and secure database views.
- Developed data ingestion scripts to load data into Hadoop HDFS from multiple sources, including AWS S3, AWS RDS, web APIs, and MongoDB.
- Utilized Spark and Hive to analyze large-scale datasets stored in Hadoop HDFS, performing filtering, aggregation, and analytical queries using Spark SQL and Data Frames.

Data Analyst | Amazon, India | Hyderabad, India | July 2019 – July 2023

- Developed optimized Provided data analysis focused on improving user experience and optimizing user retention across digital products.
- Wrote complex ad-hoc MySQL queries using correlated subqueries, window functions, and common table expressions to track user activity metrics such as retention rate and daily active users and optimized existing queries for performance on large datasets.
- Designed and maintained MySQL databases, developing stored procedures and user-defined functions to support automated daily reporting workflows.
- Built and maintained Tableau dashboards to track KPIs and product performance, integrating data from multiple sources including Excel files, AWS S3, AWS RDS, AWS Redshift, and semi-structured formats such as JSON and XML.
- Analyzed user activity trends and identified underperforming user segments, translating insights into clear recommendations for business stakeholders.
- Designed metrics for A/B testing and created Tableau dashboards to monitor experiment execution, analyze test results, and present findings and recommendations.
- Built ETL pipelines to extract data from NoSQL databases and load aggregated datasets into analytical platforms for reporting and analysis.
- Supported data governance and classification efforts by documenting and validating analytical datasets used across digital product reporting.
- Collaborated with data owners and stakeholders to ensure datasets were accurately defined, classified, and aligned with governance standards.
- Assisted in maintaining metadata and data dictionaries for MySQL, Redshift, and S3-based datasets used in enterprise dashboards.
- Performed data quality validation checks (completeness, consistency, duplication) using Python and SQL to support trusted, governed data.
- Ensured compliance with data access and security policies by supporting RBAC-based access, secure views, and audit requirements.
- Managed large-scale data storage and processing using big data technologies such as Hadoop, HDFS, Hive, and Spark.
- Developed Python scripts to automate data validation and cleaning processes, including deduplication and consistency checks, using Pandas and Apache Airflow.

Technical Skills

Databases: MySQL, Hive, Presto, PostgreSQL, MongoDB, AWS RDS Azure Cosmos DB

Data Engineering: Airflow, REST APIs(FastAPI), Apache Spark, Tableau, Hadoop, Hive

Libraries & Packages: NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib, Seaborn, Plotly, NLTK

Cloud Platforms: Microsoft Azure, Amazon Web Services (AWS)

Governance & Security: Collibra, RBAC, AD integration, Secure DB views, Audit compliance

DevOps & Infrastructure: Kubernetes, Docker, Jenkins, Terraform, Ansible, GitLab CI/CD

Programming & Scripting: Python, R, Bash, SQL

Frameworks & Platforms: Flask, Jupyter Notebook

Monitoring & Analytics: Prometheus, Grafana, Azure Monitor

Education

- M.S. in Business Analytics, Kent State University – OH | August 2023 – December 2024
- B.Tech in ME, CMR University – Telangana, India | August 2015 – May 2019
