SUMMARY

Full-Stack Software Engineer with 3+ years' experience and a Master's in CS. Skilled in **.NET, C#, Python, React, Node.js, JavaScript, SQL, and ML**. Built scalable, secure apps with cloud-native deployments via **CI/CD, Docker, Kubernetes** across **Azure, AWS, and GCP** with strong focus on clean code, **Agile** collaboration, and **mentoring** junior developers.

TECHNICAL SKILLS

Programming Languages: C++, C#, JavaScript, TypeScript, Python, Swift, Scala, Java

Frontend: React.js, Angular, Vue, Next.js, HTML5, CSS3, Tailwind CSS, Framer Motion, Redux, Webpack

Backend / ML: ASP.NET, .NET Core, Node.js, RESTful APIs, Flask, Django, PHP, Scikit-learn, pandas, TF-IDF

Databases: MySQL, SQL Server, NoSQL (CosmosDB, MongoDB, Redis), PostgreSQL, Entity Framework

Cloud / DevOps: Azure (Functions, Blob, DevOps), AWS (EC2, S3), GCP, Kafka, CI/CD, Jenkins, Kubernetes, Docker

Tools: Swagger, Postman, PyTest, structured logging (JSON, CSV), Vite, GitHub, Figma, JIRA, Agile, Linux, GenAI, DSA

Soft Skills: Problem Solving, Adaptability, Team Collaboration, Mentorship, Time Management, Communication

WORK EXPERIENCE

IT Pulse

California, USA

Software Engineer

August 2024 – December 2024

- Built and deployed a **Python Flask REST API** for real-time email classification on **AWS**, integrating with a **React** dashboard for fraud detection analytics.
- Implemented logging and anomaly monitoring using **Loguru**; **containerized** with **Docker** and deployed via **CI/CD** on **GitHub Actions** and **Azure DevOps**.
- Designed **backend** logic to serve confidence scores in predictions; ensured **API** availability and response-time reliability.

Chubb Business Services

Telangana, India

Software Engineer

September 2020 – August 2023

- Developed high-performance **RESTful APIs** using **C#/.NET, Python** (Django), **Node.js** in a microservices architecture, improving response times by 30% for insurance **policy and claims** services.
- Improved backend throughput by leveraging **async/await, multithreading**, and performance **optimization** techniques to reduce server response latency.
- Built reusable UI components in **React, TypeScript, and JavaScript**, integrating APIs and form validation to enhance user experience across applications.
- Optimized **SQL** and **NoSQL** queries using **Entity Framework, LINQ, Cosmos DB, and Redis**, boosting query efficiency by 40% and enabling faster access to customer and claims data.
- Deployed cloud-native solutions using **Azure Functions, Blob Storage, CDN, and Kubernetes**, reducing content delivery latency by 15% and infrastructure cost by 25%.
- Engineered real-time data synchronization using **WebSockets and GraphQL**, enhancing system responsiveness.
- Secured APIs with **JWT, OAuth2, and RBAC**, ensuring data protection and compliance with insurance industry regulations.
- Led **Agile** ceremonies, **mentored** junior developers, and improved API test coverage to 90% using **Postman, Swagger, Pytest**, and **documentation**, reducing onboarding time by 30%.

PROJECTS

OllivveCart – Modern Online Retail Platform (React, Typescript, Vite, Supabase, Tailwind)

[GitHub](#)

- A mobile-first online grocery platform with reusable components, real-time cart updates, secure authentication, filtering/sorting, and **PostgreSQL**-backed inventory management with seamless multi-device shopping experiences.

Assistant Chatbot - DMV (React, Typescript, Vite, shadcn-ui, Firecrawl, Lucide Icons)

- Intelligent chatbot providing California DMV information through **NLP**, intent classification, **document processing**, **web scraping** integration, confidence scoring, and interactive **user interface** clickable links.

E-Commerce Website Clone (C#, ASP.NET, Angular, SQL)

[GitHub](#)

- Full-stack **E-commerce** platform with real-time inventory tracking, dynamic checkout with pricing logic, seamless user interactions through **responsive UI** and optimized **backend APIs** for scalable product and order management.

Digit Recognizer: AI/ML-based Classification (Python, TensorFlow)

- Built and deployed a digit recognition system with real-time prediction, leveraging **neural networks**, data augmentation, and a custom **UI** to demonstrate end-to-end **machine learning integration** and user interaction.

EDUCATION

California State University, East Bay

Master of Science in Computer Science

Hayward, California, USA

August 2023 – May 2025
