

ABHINAY CHEEMARLA

TX, USA | 1(312)714 - 0856 | reddyabhinay550@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

- Accomplished Data Engineer with over 4 years of hands-on experience in designing, building, and optimizing complex data pipelines and infrastructures. Skilled in utilizing Python, SQL, and R alongside big data technologies such as Hadoop, Apache Spark, and Hive to improve data processing efficiency by up to 40%, enabling faster analytics and reporting. Proficient in cloud technologies, including Azure (Data Factory, Databricks, Synapse Analytics, Blob Storage, SQL Database) and AWS (S3, EC2, Lambda, Redshift, RDS), for developing scalable and reliable systems that enhance data accessibility and storage capabilities.
- Demonstrated expertise in ETL processes using tools like Informatica PowerCenter, Talend, SSIS, and Snowflake, achieving seamless data integration and improving data consistency by 30%. Adept at developing interactive dashboards and visualizations in Power BI and Tableau, enhancing KPI tracking and business decision-making with insights that improve strategy effectiveness by 20%.
- Proven ability to optimize SQL queries, enhance database schemas, and ensure data governance policies, resulting in a 25% increase in system performance and ensuring data accuracy and reliability. Experienced in collaborating with cross-functional teams within Agile and SDLC frameworks, employing Git and GitHub for version control to maintain code integrity and reduce conflicts by 15%.
- Certified Azure Data Engineer Associate, leveraging advanced tools and methodologies to deliver impactful solutions, including real-time analytics systems, fraud detection pipelines, and cloud-based data warehouses. A data-driven professional committed to improving workflows, reducing manual effort, and delivering actionable insights to support organizational growth and innovation.

PROFESSIONAL EXPERIENCE

Epsilon

Data Engineer

IL, USA

Jul 2024-Current

- Developed and optimized ETL pipelines using Azure cloud services, increasing data accessibility and scalability by 25% and improving database performance significantly.
- Leveraged Python and SQL in conjunction with big data tools like Hadoop and Apache Spark to reduce data processing time by 30%, enabling faster analysis and reporting.
- Designed and enforced data governance policies, resulting in a 20% improvement in data accuracy and reliability for business decision-making.
- Created interactive Tableau dashboards that provided actionable insights, enhancing business strategy effectiveness by integrating real-time data visualizations.
- Improved SQL query performance and restructured database schemas, achieving a 15% increase in query efficiency and enabling smoother data workflows.
- Utilized Git for version control, ensuring code integrity and streamlining collaborative development processes within a cross-functional team.
- Processed and analyzed large datasets using PySpark, supporting in-depth analytics and identifying trends in data, leading to actionable outcomes.
- Implemented scalable data processing solutions on Apache Spark, handling high-volume datasets effectively and maintaining data consistency.
- Streamlined ETL workflows by integrating Azure Data Factory, boosting operational efficiency and reducing manual intervention in data management processes.
- Collaborated with business stakeholders to design data-driven strategies, leveraging advanced visualizations to drive a 15% improvement in project deliverables.

Infosys Limited,

Data Engineer / System Engineer

Telangana, India

Jun 2021 – Dec 2022

- Developed ETL pipelines using Informatica PowerCenter and Talend, integrating diverse data sources into an enterprise data warehouse, improving data accessibility and consistency by 30%.
- Optimized SQL queries and stored procedures in MS SQL Server, leveraging Python and Matplotlib for exploratory data analysis, leading to a 25% increase in actionable insights.
- Architected Azure cloud infrastructure, including SQL Databases, Data Lake Storage, and Blob Storage, to support large-scale data processing and enhance operational scalability.
- Utilized Hadoop and Hive to streamline data processing, achieving a 40% improvement in processing efficiency for high-volume datasets.
- Developed interactive Power BI dashboards and integrated Snowflake for real-time reporting, enabling quicker decision-making and reducing report generation time by 20%.
- Implemented robust data governance policies, enhancing data accuracy by 20% and ensuring compliance with organizational standards.
- Collaborated within SDLC frameworks to ensure timely delivery of projects while managing code repositories in GitHub, reducing code conflicts by 15%.
- Designed scalable ETL workflows using Informatica and Talend, supporting seamless integration of structured and unstructured data.

- into the data warehouse.
- Enhanced analytics capabilities by employing advanced Python libraries and SQL optimizations, enabling deeper insights into business trends and metrics.
 - Integrated Azure Data Lake Storage and Blob Storage with enterprise systems, facilitating faster and more reliable data retrieval for analytics teams.

Trigent Software

KA, India

Data Analyst

Feb 2019 - May 2021

- Analyzed datasets from the Fraud Detection System using Python, NumPy, Pandas, and MySQL, executing over 20 SQL queries to improve insight extraction and support data-driven decisions by 30%.
- Maintained database integrity and executed data manipulation tasks with SQL and Pandas, leveraging AWS services like EC2, S3, Lambda, RDS, and Redshift to enhance system scalability by 25%.
- Developed interactive dashboards and reports in Power BI and Excel, improving KPI visualization and communication of fraudulent patterns by 20%.
- Performed data cleaning and preparation using Excel, conducting A/B testing and time series analysis to support robust fraud detection strategies.
- Enhanced data processing efficiency and scalability by integrating AWS services into fraud detection workflows, ensuring reliable and timely analysis.
- Executed over 15 SQL optimizations to streamline query performance, reducing processing times and improving database efficiency.
- Utilized Python libraries to identify and analyze patterns in fraudulent activities, contributing to enhanced fraud prevention measures.
- Collaborated in an Agile environment with cross-functional teams, using Git for version control to improve code integrity and deliver projects 15% faster.
- Automated data preparation workflows with Python and Excel, reducing manual effort and enabling faster response times in fraud analysis.
- Streamlined fraud detection reporting through dynamic Power BI dashboards, providing actionable insights to stakeholders with real-time updates.

CERTIFICATION		
Microsoft Certified: Azure Data Engineer Associate (L527F3-18D329)		Oct 2024 - Oct 2025
Microsoft Certified: Power BI Data Analyst Associate (52C001-CSAF3C)		Oct 2024 - Oct 2025

TECHNICAL SKILLS	
Programming Language:	Python, SQL, R.
Databases	MYSQL, MS SQL Server, Oracle, PostgreSQL.
Libraries	NumPy, Pandas, Scikit-Learn, Matplotlib.
Cloud Technologies	Azure (Data Factory, Databricks, SQL Database, Data Lake Storage, Blob Storage, Synapse Analysis), AWS (EC2, S3, Lambda, RDS, RedShift)
Big Data Tools	Hadoop, Apache Spark, Hive, Pig, MapReduce, HBase, HDFS, Snowflake
Visualization Tools	Tableau, Power BI, MS Excel, MS Office.
ETL Tools	Informatica PowerCenter, Talend, SSIS, SSRS, SSAS.
Methodologies	SDLC, Agile, Waterfall.
Version Control Tools	Git, GitHub.

EDUCATION	
Governors State University	IL, USA
Master's in Computer Science Engineering	
Jawaharlal Nehru Technological University	Telangana, India
Bachelors in Computer Science Engineering	

ACADEMIC PROJECTS	
Real-Time Streaming Analytics System	
Developed a real-time analytics system using Azure Stream Analytics and Azure Event Hubs to process streaming data from delivery vehicles, optimizing routes and schedules by identifying trends and providing actionable insights.	
Cloud-Based Data Warehousing	
Engineered a scalable cloud data warehouse using Azure Synapse Analytics and Azure Data Factory to aggregate sales, inventory, and customer data, enabling advanced analytics on merchandise performance and customer buying patterns for a retail chain.
