

ABHISHEK

Data Analyst | Data Scientist | AI/ML Professional

Phone: +1 (937-304-0142) | Email: abhishekkishorekumar@gmail.com

Professional Summary

Experienced Data Analyst and Data Scientist with over 5 years of experience delivering practical and data insights and solutions across industries including finance, insurance, e-commerce, and technology. Expert in SQL, Python, R, and machine learning, with a strong background in designing and deploying scalable data pipelines and real-time analytics platforms on cloud environments such as AWS, Azure, and GCP. Proficient in data wrangling, statistical analysis, feature engineering, deep learning, NLP, and data visualization using Power BI, Tableau, and Python libraries (Pandas, NumPy, Matplotlib, Seaborn, Plotly). Skilled in developing and deploying AI/ML models, leveraging advanced MLOps and streaming technologies, and experienced with ETL pipeline development, data integration, and orchestration tools such as Apache Airflow and dbt. Skilled at simplifying technical insights and communicating them clearly to cross-functional teams, including business and non-technical stakeholders. Demonstrated ability to lead end-to-end data projects, optimizing cloud infrastructure, and converting complex datasets into strategic insights that align with organizational goals. Passionate about leveraging AI responsibly to drive impact and compliance.

Technical Skills

- ✓ **Programming & Scripting:** Python, R, SQL, Scala, Java, Bash
 - ✓ **Analytics & Visualization:** Power BI, Tableau, Looker, Qlik Sense, Streamlit, Dash, Superset, Excel, Matplotlib, Seaborn
 - ✓ **Statistics & Modeling:** Regression, A/B Testing, Hypothesis Testing, Time Series (ARIMA, Prophet), Feature Engineering, Cross-Validation, Model Optimization, Pandas, NumPy
 - ✓ **Machine Learning & Deep Learning:** Scikit-learn, XGBoost, LightGBM, PyCaret, Statsmodels, TensorFlow, Keras, PyTorch, CNN, LSTM, GANs, Transformers, TensorBoard
 - ✓ **Natural Language Processing (NLP):** spaCy, NLTK, BERT, Gensim, HuggingFace, LangChain, OpenAI API
 - ✓ **Data Engineering & ETL:** Apache Airflow, dbt, Talend, Informatica, NiFi, Alteryx, Airbyte, Fivetran
 - ✓ **MLOps & Deployment:** MLflow, Docker, Kubernetes, FastAPI, Flask, Jenkins
 - ✓ **Big Data & Real-Time Processing:** Hadoop, Spark, Hive, Apache Kafka, Beam, Kinesis, Pub/Sub
 - ✓ **Databases & Warehouses:** MySQL, PostgreSQL, Oracle, MongoDB, Redis, Neo4j, Snowflake, Redshift, BigQuery, Azure Synapse, Databricks
 - ✓ **Cloud Platforms:** AWS (S3, Glue, SageMaker), Azure (Synapse, Data Lake), GCP (BigQuery, Vertex AI)
 - ✓ **Geospatial & Graph:** PostGIS, GeoPandas, Google Maps API, Neo4j, ArcGIS
 - ✓ **Data Governance & Security:** RBAC, IAM, Data Masking, Encryption, GDPR, CCPA, Apache Atlas, Collibra, Alation
 - ✓ **Collaboration & Version Control:** Git, Jira, Confluence, Slack, Microsoft Teams
-

Experience

Client: CitiBank, Dallas, USA

Role: Data Analyst / Data Scientist

Aug 2023 – Present

Description: CitiBank is a leading global financial services provider. Led development of a real-time, cloud-native analytics platform supporting data-driven decision-making across compliance, finance, and product teams. Focused on building scalable ETL pipelines, advanced ML model deployment, real-time streaming analytics, and interactive dashboards.

Responsibilities:

- ✓ Architected and automated scalable ETL workflows using Airflow, dbt, Talend, Informatica, and Apache NiFi with SQL, Python, and Bash for real-time data integration across cloud platforms (AWS, Azure, GCP).
- ✓ Designed RESTful ML model scoring services using FastAPI and Flask in Python, deployed via MLflow, Docker, and Kubernetes with CI/CD pipelines in Jenkins and GitHub for version-controlled deployment.
- ✓ Built predictive and classification models with Scikit-learn, XGBoost, LightGBM, TensorFlow, Keras, and PyTorch to support fraud detection, credit scoring, and risk analysis.
- ✓ Delivered interactive dashboards and visual analytics using Power BI, Tableau, Looker, Matplotlib, Seaborn, and Plotly for executive and operational decision-making.
- ✓ Integrated Kafka, Kinesis, and Pub/Sub for real-time streaming data ingestion and Spark, Databricks for distributed processing and responsive analytics.
- ✓ Implemented monitoring, alerting, and explainability solutions using SHAP, LIME, Prometheus, Grafana to ensure transparency and reliability of ML models.
- ✓ Engineered geospatial analytics pipelines using PostGIS, GeoPandas, and Google Maps API to detect transaction-level anomalies and support compliance efforts.
- ✓ Enforced data security with IAM, RBAC, encryption, data masking, and audit trails to meet GDPR, PCI DSS, and SOX standards.
- ✓ Led model governance, version control, MLOps workflows with MLflow, Weights & Biases, and reusable AI microservice architecture standards.
- ✓ Collaborated with compliance, finance, and product stakeholders to align data initiatives with organizational objectives.

Impact: Enabled real-time data pipelines and scalable ML deployment, delivering timely, secure insights that improved fraud detection, operational efficiency, and regulatory compliance across banking operations.

Company: Zaubacorp (Sri Vit Pvt. Ltd.), Bengaluru, India

Role: Data Analyst → Data Scientist

Dec 2019 – Aug 2022

Description: Zaubacorp is an analytics consultancy serving retail, logistics, and finance sectors. Promoted from Data Analyst to Data Scientist for delivering high-impact projects such as demand forecasting, route optimization, and financial risk mitigation using predictive modeling, NLP, and advanced analytics.

Responsibilities:

- ✓ Designed and developed interactive KPI dashboards and self-service reporting tools using Power BI, Tableau, Looker, Qlik Sense, and Excel for improved decision-making.
- ✓ Built and maintained data marts with SQL in Snowflake, Redshift, PostgreSQL, Oracle, MongoDB to support enterprise BI and reporting.
- ✓ Developed predictive models for inventory optimization, churn analysis, and demand forecasting using Scikit-learn, XGBoost, LightGBM, PyCaret, Statsmodels in Python and R.
- ✓ Applied NLP techniques including sentiment analysis, topic modeling, and feedback classification using spaCy, NLTK, BERT, GPT, Word2Vec, Gensim, and TextBlob.
- ✓ Automated ETL pipelines with Apache Airflow, dbt, Talend, Informatica, NiFi, Alteryx, integrating data from APIs, flat files, and relational databases.
- ✓ Conducted comprehensive data wrangling, profiling, anomaly detection, feature engineering with Pandas, NumPy, Dask, and performed statistical analyses (regression, A/B testing, hypothesis testing).
- ✓ Leveraged Spark, Databricks, Hadoop (HDFS, Hive, Pig, MapReduce), Kafka for big data processing and batch/streaming analytics.
- ✓ Tuned and optimized machine learning models using cross-validation, hyperparameter optimization, and explainable AI tools like SHAP and LIME.
- ✓ Ensured secure data practices, encryption, IAM, RBAC, GDPR/CCPA compliance, and collaborated with DevOps for deployment using Docker, Kubernetes, Jenkins, Git.
- ✓ Deployed production-ready models using AWS SageMaker, Azure ML, Vertex AI, FastAPI, Flask, with CI/CD pipelines.

Impact: Enhanced operational efficiency, improved data accessibility, accelerated analytics workflows, and delivered trustworthy, explainable AI solutions that drove business value across retail, logistics, and finance domains.

Education

- ✓ **Master of Science** in Computer Science, Wright State University
- ✓ **Bachelor of Technology** in Electronics and Communication Engineering, TKR College of Engineering and Technology
