

Abhishek Reddy Kasimreddy

Data Analyst

akasimreddy@gmail.com | 2096307469 | [LinkedIn](#)

PROFESSIONAL SUMMARY

- **3+ years of experience** as a Data Analyst with expertise in financial, banking, and business analytics.
- Proven ability to **clean, transform, and analyze large datasets** to drive business decisions.
- Developed **predictive models, automated reports, and interactive dashboards** to enhance operational efficiency.
- Strong background in **financial data analysis, risk assessment, and fraud detection** from roles at Goldman Sachs and HDFC Bank.
- Skilled in **ETL processes, data warehousing, and cloud platforms (AWS, Azure)** for scalable data solutions.
- Experience in **statistical modeling, A/B testing, and regression analysis** to uncover key business insights.
- Proficient in **Big Data tools (Hadoop, Spark) and database management (SQL, NoSQL)**.
- Collaborated with **cross-functional teams, stakeholders, and senior management** to align analytics with business goals.
- Strong **problem-solving and communication skills**, with the ability to present complex data findings clearly.
- Continuously learning and adapting to **emerging data technologies and industry trends**.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, R, Java
- **Data Visualization:** Tableau, Power BI, Matplotlib, Seaborn
- **Database Management:** MySQL, PostgreSQL, MongoDB
- **Big Data Tools:** Hadoop, Spark (PySpark)
- **Statistical Analysis:** Regression, Hypothesis Testing, A/B Testing
- **Machine Learning:** Scikit-learn, TensorFlow (Basic), Predictive Modeling
- **ETL & Data Warehousing:** SSIS, Alteryx, Informatica
- **Cloud Platforms:** AWS (S3, Redshift), Azure (Data Factory, Synapse)
- **Excel & Advanced Analytics:** VLOOKUP, Pivot Tables, Macros
- **Version Control:** Git, GitHub
- **Agile & Project Management:** Jira, Scrum, Kanban
- **Financial Data Tools:** Bloomberg Terminal, FactSet (Basic)

WORK EXPERIENCE

Goldman Sachs | Data Analyst | NYC, NY |

Feb 2024 – Present

Responsibilities:

- Developed Python automation scripts leveraging Pandas and NumPy to extract, clean, and transform daily trading data from multiple sources including Bloomberg Terminal and internal databases, reducing monthly reporting time by 30% (from 40 to 28 hours) while improving data accuracy.
- Conducted comprehensive risk assessment analysis by building multivariate regression models that incorporated 50+ market indicators, enabling more accurate forecasting of market trends with 85% prediction accuracy for quarterly risk exposure.
- Built interactive Tableau dashboards with drill-down capabilities that consolidated \$50B+ AUM (Assets Under Management) across 15 key performance metrics, now used weekly by C-level executives for portfolio rebalancing decisions.
- Performed rigorous SQL-based data cleaning across 10+ critical financial datasets, implementing automated validation checks that ensured 100% compliance with SEC/FINRA regulatory reporting requirements.
- Assisted in the cloud migration initiative by redesigning ETL pipelines for AWS Redshift, resulting in 60% faster query performance and the ability to process 5TB+ of historical trading data for backtesting purposes.

- Collaborated closely with quantitative analysts to validate algorithmic trading models by developing Python backtesting frameworks that analyzed 10 years of historical market data across 500+ securities.
- Automated 15+ monthly financial reports using Python scripting, eliminating manual errors in P&L statements and balance sheet reconciliations while saving the team 20+ hours per month in processing time.
- Optimized complex SQL queries for real-time transaction monitoring systems, reducing query execution time from 12 seconds to under 3 seconds for critical compliance checks on 1M+ daily transactions.
- Supported enterprise data governance initiatives by documenting 200+ critical data elements, establishing lineage tracking, and implementing quality metrics that improved overall data integrity scores by 35%.

Environment: Python (Pandas, NumPy), SQL, Tableau, AWS (Redshift, S3), Snowflake, Excel (Advanced Formulas)

HDFC Bank | Data Analyst | India |

July 2021 – June 2023

Responsibilities:

- Designed and implemented fraud detection models using isolation forest and DBSCAN anomaly detection algorithms that analyzed 5M+ monthly transactions, reducing fraudulent cases by 15% in the first quarter of deployment.
- Built predictive models in R using logistic regression and XGBoost to assess loan default risks across 500,000+ customer profiles, improving approval accuracy by 20% while maintaining the same default rate threshold.
- Automated 25+ monthly financial reports by developing Power BI dashboards connected to SQL Server, reducing manual workload by 40 hours monthly and enabling drill-down analysis previously unavailable to business users.
- Optimized 15+ critical SQL queries for transaction data retrieval by rewriting joins, adding proper indexing, and restructuring subqueries, resulting in 70% faster report generation for daily operations meetings.
- Developed customer segmentation models using K-means clustering on 2M+ customer profiles with 50+ attributes, enabling targeted marketing campaigns that achieved 30% higher conversion rates.
- Created real-time Tableau dashboards monitoring transactional anomalies across 1,200+ bank branches, alerting fraud teams to suspicious patterns within 30 seconds of transaction occurrence.
- Collaborated with risk management teams to refine credit scoring models by incorporating alternative data sources including utility payments and mobile wallet usage, improving risk prediction by 12%.
- Performed time-series forecasting using ARIMA and Prophet models to predict daily cash flow needs across branches with 92% accuracy, reducing liquidity costs by \$250,000 annually.

Environment: R, SQL, Power BI, Hadoop (Hive), Excel (VBA, Macros), Python (Basic)

EDUCATION

- **Master's in Business Analytics** – Trine University, USA
- **Bachelor's in Information Technology** – Sreyas Institute of Engineering and Technology, India
