RELEVANT EXPERIENCE

Software Engineer, MyT-Me (Through LEF Associates), San Francisco, California Jan 2025 – present

- Designed platform architecture and contributed to feature specifications for a user-facing AI-driven application.
- Built and integrated a GenAI solution using OpenAI APIs and LangChain, leveraging Pydantic for schema validation within the LLM pipeline.
- Modeled DynamoDB entities for scalable, efficient data storage and implemented GraphQL APIs to enable seamless communication across services.
- Deployed the platform on AWS using Docker and CI/CD pipelines, streamlining development workflows and supporting reliable feature releases.

Software Engineer, Genentech (Through Agilisium), San Francisco, California July 2024 – Dec 2024

- Designed and built data pipelines by automating ETL workflows with AWS Glue and Airflow, using Python and SQL to enhance analytics with Athena and Redshift.
- Analyzed sales and insurance data in Palantir Foundry with Python and SQL to uncover discrepancies in multi-million-dollar contracts, driving pricing and contract strategy adjustments.
- Created dashboards and applications for business users to visualize insurance mix, sales performance, and contract insights, working in an Agile Scrum environment.
- Performed functional and data validation testing to ensure accuracy, reliability, and alignment with business requirements.

Software-Intern, High Radius, Chennai, Tamilnadu, May 2021 – June 2021

- Performed data cleaning and exploratory analysis on invoice records using Numpy and pandas to uncover trend
- Designed a machine-learning model using Python and scikit-learn to accurately forecast invoice clearing dates, reducing settlement delays.

Research-Intern, Dexterity Global, Chennai, Tamilnadu, May 2020 – June 2020

- Researched Chatbots, AI, and LLMs to upgrade the Dexterity Global platform, focusing on integrating advanced technologies for improved user interaction.
- Designed an IBM Cloud-based Chatbot utilizing LLMs for the Dexconnect website, enhancing user navigation through welfare programs and optimizing the site's business use case.

EDUCATION

M.S, Computer Engineer with Specialization in Data Science Aug 2022 – May 2024

San Jose State University, San Jose, CA

Relevant Coursework: Web UI Design, Data Mining, Enterprise Software Development, Software Security Technologies

BTECH, Computer Science with Specialization in Cloud Computing June 2018 – May 2022

SRM Institute of Science and Technology, Chennai India

Relevant Coursework: Data Structures and Algorithms, Object Oriented Programming, Database Management Systems, Operating Systems, Cloud Architecture, Artificial Intelligence, and Discrete Mathematics for Engineers

SKILLS AND CERTIFICATIONS

Certifications: AWS Certified Cloud Practitioner

Programming Languages: C++, Java, Python, Reactjs, PostgreSQL, HTML, CSS, JavaScript, Typescript, PySpark, Git

Databases:- SQL, SQLite, DynamoDB, REST, SOAP

Methodologies and Frameworks: Agile, GraphQL, GenAI, Neo4j, Rasa, AWS, Docker, Kubernetes

PROJECT EXPERIENCE

MedTrack, Django, Python, PostgreSQL, Scikit-Learn, Rest API, Large Language Models, GenAI Aug 2023 - May 2024

- Accelerated disease prediction and specialist referrals through MedTrack, using Django, Python, and GenAI, and incorporated a ChatGPT assistant for personalized healthcare guidance.
- Applied HIPAA and EHDS compliance with encryption and access controls to secure patient data

ACTIVITIES / AWARDS

Technical Member, Student Copter research organization

Aug 2018 - Jun 2022

- Published two IEEE papers innovatively addressing real-world challenges in [contactless identification for pandemic-sensitive environment](#) and [multilingual translation](#)
