

Acharya Hithendra Kothagattu

Contact: +1 (972) - 850- 8516

Emailid: hithendra580@gmail.com

LinkedIn: <https://www.linkedin.com/in/acharya-hithendra-kothagattu-7a479b114>

Java Developer with 5+ years of experience in developing applications using Java, j2EE, Hibernate, and Spring framework and experienced in developing Object Oriented, Enterprise and Web - based Applications.

- Expertise in all stages of the software development life cycle (SDLC), including requirements gathering, analysis, design, implementation, testing, deployment, and production support.
- Experience in Core Java concepts such as OOP Concepts, Collections Framework, Exception Handling, I/O System, Multi-Threading, and JDBC.
- Experience with Jenkins methodologies including CI/CD Continuous Integration and Continuous Deployment.
- Expertise in database systems like SQL Server, Oracle, MySQL, PostgreSQL, and NoSQL database MongoDB. Proficient in performing CRUD and Other SQL operations using Relational Databases.
- Developed and maintained scalable and reliable software systems with experience in full-stack development.
- Designed and implemented software architecture solutions to enhance system scalability and reliability.
- Proficient in programming with Java and Python, delivering high-quality code aligned with industry standards.
- Led full SDLC projects, including coding standards, peer code reviews, version control (GIT), build automation (Maven, Jenkins), testing, and deployment.
- Conducted automated testing using JUnit, Cucumber, and integration testing frameworks to ensure robust software performance.
- Collaborated in Agile environments, contributing to sprint planning, backlog grooming, and continuous integration/continuous deployment (CI/CD) processes.
- In-depth knowledge of software development methodologies and concepts like SQL, Java, JavaScript, Spring MVC, RESTful API, Hibernate, AngularJS, HTML and CSS.
- Experienced in web development using HTML, CSS, JavaScript, AngularJS and NodeJS.
- Designed and developed MVC model-based applications using open-source frameworks like Hibernate and Spring.
- Strong experience in implementing web services SOAP and RESTful
- Experienced using Web Services, Micro Services, AWS, and Docker to build communication between two applications operating on different servers.
- Experienced in using build tool like Jenkins.
- Used GIT as version control tools for source code management and used JIRA for project, bug tracking tool.
- Good understanding of Kubernetes architecture and concepts like services, pods, and replica sets
- Experience in using version control and configuration management tools like GitHub and Bitbucket.
- Experience in using JUnit for unit testing, TDD for improving legacy code, and Log4j for logging with various levels.
- Proficient in writing Test Scenarios and Test Cases in the Quality center for Unit Testing.

Technical Skills

Languages	Core Java, Python, SQL, PL/SQL.
JAVA/J2EE Technologies	J2EE, JUnit, JDBC, Hibernate, Spring, Spring MVC, Spring Boot, Web Services (RESTful, SOAP), XML, JSON.
Mark-up/XML Technologies	HTML, CSS, AngularJS, XML, React JS.
Tools & Framework	Spring, Spring MVC, Junit.
Web services	RESTful, Amazon Web Services (AWS), Micro Services.
Web/App Servers	Tomcat, JBoss, WebLogic.
Database	Oracle, MySQL, MS SQL-Server.
Development Tools	Eclipse, IntelliJ, Visual Studio, Spring Tool Suite (STS),
Testing Tools/ Others	JMeter, Postman.
Version Control	Bitbucket, SVN, GitHub

Education:

Bachelors in Computer Science and Engineering: SR Engineering College. **CGPA- 3.25**

Professional Experience:

Java Developer

Wells Fargo – Irving, TX

Oct 2024 – Present

Responsibilities:

- Worked in an Agile environment, including attending release planning meetings, sprint planning meetings, sprint retrospectives, and daily scrums.
- Developed and Implemented Micro Services using Java/J2EE, Spring Boot, Spring Framework.
- Involved in CI/CD process using GIT, Jenkins job creation, Maven build Creating Docker image and deployment in AWS environment
- Designed and developed microservices, Rest/Soap services using Spring Boot, Spring MVC, and AWS.
- Designed and implemented application using Java, Spring Annotations, Spring AOP, Spring Transactions, JPA.
- Used Java8 features in developing code like Lambda expressions, creating resource classes, fetching documents from database.
- Provided technical support to application development teams by offering expertise in database design.
- Optimization techniques, ensuring efficient and scalable database structures that meet application requirements and performance standards.
- Expertise with Relational databases such as Oracle, SQL server and MYSQL.
- Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- Designed, configured, and managed public/private cloud infrastructures using Amazon Web Services (AWS).
- Created DB Links to interact with other Oracle databases in the distributed database system.
- Maven is used as a Build tool to automate the build process for the entire application and used Jenkins for continuous integration and deployment.
- Used Junit for Unit Testing and Log4J for logging.
- Created REST based Web services using Spring Boot and used Soap UI and Swagger to validate webservices.
- Designed and implemented database structure in MYSQL Server. Used MySQL to write queries to extract and verify data from the MYSQL Server Database.
- Developed the application with Continuous Integration and Deployment using Jenkins.
- Configured Docker container and build pipeline Jenkins CI/CD tool for continuous integrating and deploying application on servers.
- Developed, debugged, integrated, and deployed applications using Eclipse (IDE) and used GIT as Version Control.

Software Developer (JAVA)

CGI - India

Oct 2021 – Jun 2023

Responsibilities:

- Developed the application in AGILE /SCRUM fashion, collaborating with Business Analysts, Product owners, Scrum masters, Scrum team, and stakeholders in the software development process.
- Used Java8 features in developing code like Lambda expressions, creating resource classes, fetching documents from database.
- Designed and developed the Presentation layer using Spring MVC Framework.
- Extensively involved in the design and implementation of web pages by using HTML5, CSS3, jQuery, JavaScript, and working knowledge of AngularJS.
- Expertise in database development and implementation using Oracle, SQL Server, MySQL, MongoDB, and PL/SQL.
- Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, Test, and Deploy.
- Experience using Spring Boot which is radically faster in building cloud Microservices and developing a Spring-based application with very little configuration.
- Implemented Core Java 1.8 features for the existing application wherever required.
- Used JavaScript for client-side presentation and data validation on the client side within the forms.
- Implemented Restful web services to retrieve data from the client side and made Rest API calls from Angular JS.

- Handled response data from RESTFUL web services using JSON and jQuery to update UI Interacted with Core Java **controllers** (jQuery, Ajax, and JSON to write/read data from backend systems).
- Developed Bash scripts for automation of deployment processes, including CI/CD pipelines using Jenkins and Kubernetes, enhancing efficiency in software delivery.
- Coded web services to expose Oracle DB Functions and Store procedures.
- Wrote JUnit test cases for unit testing, integration testing, and automated functional tests, run automatically by Jenkins in the builds triggered by each push to Git.
- Server instances are created on AWS and worked on Code pipeline with Tomcat, and Swagger is installed and used for deploying Microservices.
- Built an application using MAVEN and used Log4J to generate log files for the application.
- Used Jenkins for continuous integration to deploy applications in the AWS cloud.
- Used JIRA for tracking the project Stories in Agile Methodology.
- Extensively used My Eclipse IDE configured and deployed the application into Apache Tomcat.

Associate Software Engineer (Java)
CGI – India

May 2019 – Oct 2021

Responsibilities:

- Participated in requirements analysis along with other team members.
- Involved in design discussions for features implementation and enhancements.
- Involved in design and design report preparation.
- Handled all the coding part for all of the enhancements assigned.
- Developed SQL scripts, procedures and modified existing SQL scripts/procedures required for project enhancements.
- Written unit test cases and tested the developed code.
- Developed complete workflow in Spring MVC for Controllers, Model and View.
- Developed generic scripts, which can be used common for multiple graphs and Worked with Partition components like partition by Key and partition by Expression.
- Developed continuous flows for receiving/Transferring data from Message queue's using subscribe and publish components.
- Built Ab-initio graphs to incorporate transformation logic as per business requirements and required Unix Scripts.
- Autosys, ITRS tools has been used to track scheduling of the jobs within their SLA, Logs investigation for failing jobs, resolving and escalation depends on the failure reason.
- Troubleshooting support Incidents/Requests on time and Resolving service incident tickets without breaching SLA.
- Debugged the Spring code for any test defects, production issues I was involved in.
- Transformed all the JSPs into script-less JSPs by using core tags.
- Written JavaScript code for basic client-side validations and dynamic event processing.
- Involved in writing stored procedures during development.
- Written unit test cases and tested the developed code.
