Skilled Java Developer with 3+ years of experience in building and maintaining scalable web applications using Java, Spring Boot, and RESTful APIs. Proficient in writing clean, maintainable code and contributing to frontend features with modern JavaScript frameworks (React). Experienced in optimizing databases, integrating third-party APIs, and supporting CI/CD pipelines for efficient software delivery. Collaborative team player focused on performance, code quality, and delivering business-aligned solutions.

CAREER HIGHLIGHTS

- Contributed to integrating external services such as **Stripe for payments and Twilio for messaging**, reducing manual workflows, and enhancing application interoperability.
- Participated in peer **code reviews and pair programming sessions**, strengthening team collaboration and maintaining coding standards for long-term maintainability.
- Supported feature design and contributed to documentation, ensuring on-time delivery of key modules while aligning with scalable architecture principles.

WORK EXPERIENCE

Gener8tor - Madison, WI

Feb 2022 - Present

Software Developer II

- Developed and maintained **RESTful APIs using Java, Spring Boot, and Spring MVC**, supporting critical business functions with scalable, maintainable backend services.
- Helped migrate **legacy Java EE modules to Spring Boot**, reducing technical debt and improving application responsiveness and maintainability.
- Integrated **third-party APIs (e.g., Stripe, Twilio)** to automate business workflows and extend platform capabilities with minimal friction.
- Built responsive, accessible front-end components using **React, Bootstrap, and JavaScript**, contributing to a seamless cross-device user experience.
- Tuned **PostgreSQL queries** and refactored data access logic using Spring Data JPA and JDBC templates to enhance performance.
- Actively participated in **Agile practices** like sprint planning, daily scrums, and retrospectives, ensuring clear communication and iterative improvements.
- Collaborated with **QA and DevOps** to configure and troubleshoot **CI/CD** workflows using CircleCI and GitHub Actions, streamlining deployments.
- Assisted in designing modular service layers using **Spring Boot and Hibernate, applying SOLID principles** to enhance code reusability, reduce coupling, and simplify unit testing across modules.
- Used Git and GitHub to manage branches, resolve merge conflicts, and uphold code quality through regular reviews.
- Assisted in performance monitoring and diagnostics using **New Relic and AWS CloudWatch**, improving reliability across production environments.

SKILLS

- **Backend Development:** Java, Spring Boot, Spring MVC, Spring Data JPA, REST APIs, GraphQL
- **Frontend Development:** React, Angular, VueJS, KnockoutJS, CSS3, Bootstrap, LESS, SASS, Tailwind CSS, Figma to HTML
- **Database Management:** PostgreSQL, MSSQL, Amazon RDS, Oracle DB
- **Cloud & DevOps:** AWS, Azure, Docker, CircleCI, CI/CD pipelines, Amazon S3
- **Project Management Tools:** Monday.com, JIRA, Trello, Asana
- **Additional Tools:** Varnish, Fastly, Redis, RabbitMQ, Elasticsearch, Zoho, Klaviyo, New Relic, Git

EDUCATION

- GC University - BS (Hons) in CS
