SUMMARY

Data Analyst with strong healthcare domain expertise and hands-on experience transforming complex clinical data into actionable insights. At CVS Pharmacy, built scalable analytics solutions using Python, SQL, AWS, and Tableau to improve patient outcomes, enhance regulatory reporting, and reduce data latency by 60%. Proven ability to automate data pipelines, drive predictive modeling, and align cross-functional teams in HIPAA-compliant environments. Adept at turning raw EHR and claims data into business value ready to bring the same impact to your team.

SKILLS

- **Programming & Query Languages:** Python, SQL, R, Java, C++, PySpark, VBA
- **Libraries & Data Manipulation:** Pandas, NumPy, Seaborn, Matplotlib, Scikit-learn, TensorFlow, Keras, Transformers, Dask, BeautifulSoup, Selenium
- **Cloud Platforms & DevOps:** AWS (S3, EC2, Lambda, Redshift, RDS, DynamoDB, SageMaker, Glue), Azure (Data Factory, Blob Storage), Docker, Git, Jenkins, Flask, FastAPI, CI/CD Pipelines
- **Databases & Storage:** MySQL, PostgreSQL, Oracle, MongoDB, SQL Server, Amazon Redshift
- **Analytics & Visualization:** Tableau, Power BI, Looker, D3.js, MS Excel (Advanced), Jupyter Notebook
- **Machine Learning & AI:** Scikit-learn, TensorFlow, Keras, PyTorch, spaCy, SHAP, LIME
- **Healthcare & Regulatory:** EHR Integration (HL7, FHIR), ICD-10/CPT Codes, HIPAA Compliance, HEDIS, STARS, Patient Outcome Modeling
- **ETL & Data Engineering:** PySpark, Apache Airflow, AWS Glue, Talend, Data Modeling (Star, Snowflake), Data Wrangling
- **Tools & Platforms:** GitHub, VS Code, JIRA, Confluence, TestRail, Excel VBA

EXPERIENCE

Data Analyst

CVS Pharmacy, USA | May 2023 – Present

- Automated patient outcome modeling using Python, Pandas, and Scikit-learn, reducing manual reporting time by 45% and enhancing HEDIS & STARS quality measure tracking.
- Designed and deployed ETL pipelines with AWS Glue and PySpark to ingest and transform EHR data (HL7/FHIR), enabling scalable reporting on over 2M patient records.
- Conducted in-depth claims and prescription analysis using SQL and Tableau, uncovering \$1.2M in potential savings through drug utilization pattern optimization.
- Streamlined regulatory reporting for HIPAA, ICD-10, and CPT compliance using SQL Server and Power BI, cutting processing time by 30%.
- Built predictive models for patient readmission and adherence using TensorFlow, SHAP, and LIME, improving risk stratification accuracy by 18%.
- Partnered with clinicians, pharmacists, and data engineers to integrate FHIR-based EHR data across business units, facilitating cross-functional insights delivery.
- Managed workflow orchestration using Apache Airflow, enabling timely refresh of dashboards and minimizing data latency issues by 60%.
- Developed REST APIs with Flask to serve real-time analytics to internal teams, ensuring secure data access and operational agility.
- Leveraged AWS S3, Lambda, and Redshift for scalable storage and querying of large healthcare datasets.
- Utilized TestRail and JIRA for tracking test cases and sprint progress within Agile teams, ensuring robust testing of analytics pipelines.

Data Analyst

I Sparrow, India | Jul 2021 – Jul 2022

- Conducted customer behavior analysis using Python, SQL, and Tableau, enabling data-driven decisions that increased product adoption by 22%.
- Developed interactive dashboards to track KPIs across marketing and operations, leveraging Power BI and Excel VBA.
- Cleaned and structured raw datasets using NumPy, Pandas, and MySQL, improving data accuracy by 40% in cross-departmental reports.
- Supported ad-hoc data requests and insights delivery for stakeholders, helping improve campaign targeting and budget allocation.
- Implemented CI/CD pipelines with Git and Jenkins to streamline deployment of analytics scripts.

EDUCATION

- **University of the Cumberlands, KY**
Master in Information Technology — Aug 2024
- **Sathyabama Institute of Science and Technology, India**
Bachelor of Engineering in Computer Science — May 2022
