Education

University of Illinois - Chicago

Master Of Science, Computer Science

August 2022 – May 2024

Chicago, IL

Narsee Monjee Institute of Management Studies

Bachelor of Technology, Computer Engineering

August 2016 – May 2020

Mumbai, India

Technical Skills

Programming Languages: C#, Python, C++, Java, JavaScript, SQL

AI/ML: Scikit-learn, NLP(spacy, NLTK), Pandas, NumPy, Prompt Engineering

Relational & NoSQL Databases: MySQL, Postgres, Oracle, SQLite, Firebase, Redis, Cassandra, MongoDB, SAS

Web Technologies: HTML, CSS, jQuery, Flask (Python), REST APIs, ETL

Tools: Git, Docker, VS Code, Android Studio, Anaconda, Eclipse

Cloud Platforms: Azure, AWS

Experience

University of Illinois - Chicago | *Software Developer*

September 2024 – October 2025

- Developed automated **Python** scripts and data collection systems for fire safety equipment across **50+** university buildings, reducing manual processing time by **30%** through efficient ETL pipelines and database integration.
- Exposed data via **Flask REST APIs** to downstream stakeholders, enabling real-time compliance dashboards and automated maintenance recommendations for facilities teams.
- Translated facilities business rules into configurable scripts and data validations, implemented issue triage and root-cause analysis to unblock deployments.
- Deployed scikit-learn risk models and wired outputs into scheduling systems to trigger follow-up actions and closing the loop from analytics to operations.

Exponential AI | *Software Developer*

June 2023 – December 2023

- Designed and implemented **Python**-based custom parsers for multiple EDI file formats, enabling automated extraction of healthcare transaction data and significantly reducing manual intervention and processing time.
- Applied **NLP** techniques using **spacy** and **NLTK** to transcribe and analyze **ENSO** training videos and user guides, building structured documentation that facilitated faster team onboarding and reduced training overhead.
- Standardized data extraction workflows across healthcare formats and implemented automated quality assurance systems with email alerts for inconsistent documentation, ensuring regulatory compliance and improved team communication

Metamorphick Solutions | *Software Developer*

August 2020 – June 2022

- Led development of internal tools like Penetration Manager and Content Creator, using **C#** and **.NET** to simplify custom HVAC design workflows and automate routine tasks for engineering teams.
- Engineered data handling modules for Comos using client-server architecture principles, optimizing performance for large datasets in a high-load production environment.

Certifications

- CompTIA Security+ Certified November 2025
- Microsoft Certified: Azure Fundamentals. August 2025
- AWS Certified Cloud Practitioner. December 2024

Academic Projects

Job Search Agent | *Python, Streamlit*

September 2025

- Developed an AI-powered job search assistant using Streamlit, OpenAI GPT models, and web scraping to extract, filter, and analyze 100+ job postings with personalized recommendations.
- Built an AI-powered job search assistant with GPT, web scraping, and Streamlit, offering personalized recommendations, resume optimization, and scalable job tracking with user preference storage.

Project Shining Star | *Unity, C#*

April 2024

- Developed an interactive VR simulation in Unity using **C#**, processing **118,000+** stars from ATHYG dataset in real-time 3D, optimized for UIC's CAVE multiwall projection environment with custom shader programming to maintain 60+ FPS
- Engineered interactive astronomical visuals, including real-time constellation toggling, stellar evolution simulation, dynamic scaling, and color-based classification for stellar and exoplanet data.

Mental Health in Twitter Data | *Python, NLP*

December 2023

- Applied NLP techniques (sentiment analysis, LDA topic modeling, NER) using spacy, NLTK, and scikit-learn to analyze **500,000+** tweets, extracting emotional patterns and contextual insights from mental health discourse.
- Developed ensemble ML models (Random Forest, SVM, BERT transformers) achieving **87% accuracy** in classifying mental health support mechanisms including peer support, professional resources, and crisis intervention strategies.
