Summary

Early-career software engineer specializing in high-performance data systems, with hands-on experience optimizing Python ETL pipelines and tuning relational and NoSQL databases. Eager to continue architecting scalable, resilient storage and data platforms that power real-time analytics and drive strategic business insights.

Professional Experience

- Outlier | *Generative AI Training & Performance Engineer*

May 2024 - Present

 - Reviewed AI-generated code for test cases including distributed systems and storage solutions, ensuring production-grade standards for scalability, fault tolerance and data integrity.
 - Debugged complex Python data processing workflows and storage access patterns, identifying performance bottlenecks that improved AI output quality by 12%.
 - Developed interactive coding prompts and test harnesses to stress and train the model, improving solution recall by 23%.
- Lumen | *Engineering Planner*

Jan 2024 - Aug 2024

 - Optimized SQL database performance using SQL Server Management Studio for query refinement and indexing strategies, reducing average execution time by 15%.
 - Created version control and deployment SOP documentation for multi-state network rings using OC-100 NICs, supporting a \$1.8M infrastructure upgrade initiative.
 - Developed Python-based ETL pipelines processing multi-source datasets, implementing parallel processing and caching strategies for 35% reduction in processing time.
- Wells Fargo | *Bank Teller*

Aug 2022 - July 2023

 - Handled large volumes of cash transactions and financial instruments while maintaining strict compliance with bank procedures and providing exemplary customer service.
 - Processed 150+ daily cash transactions while meticulously maintaining transaction logs and safe-deposit records with 100% data-entry accuracy ensuring full compliance.

Projects

- OBBBA.org | *Developer* | *Next.js, React, TypeScript, Tailwind CSS, Lucide React, react-syntax-highlighter, Vercel*

 - Architected high-performance web platform handling 1,500+ concurrent users with 95+ Lighthouse score, implementing CDN caching and lazy-loading for optimal data delivery.
 - Developed an interactive impact calculator that delivered personalized policy insights and increased user engagement by 25%.
 - Curated Urban Institute and CBPP data with rigorous verification, guaranteeing accuracy and WCAG 2.1 accessibility compliance.
- Heart Disease Risk Predictor | *Developer* | *Python, Flask, Streamlit, SQLite, scikit-learn, Plotly, Docker*

 - Engineered ML platform with optimized data preprocessing pipeline for medical datasets, achieving 91.9% ROC-AUC through ensemble methods and feature engineering.
 - Developed real-time data visualization dashboard with automated report generation, implementing efficient data aggregation for patient risk analytics.
 - Containerized 8-stage ETL pipeline with optimized storage schema, achieving sub-15-second processing for 100MB datasets with horizontal scaling capabilities.

Education

- Rutgers University (New Brunswick, NJ)

Expected Graduation: May, 2026

Bachelor of Arts in Computer Science | GPA: 3.7
- Middlesex College

Graduated: Dec, 2024

Associate of Science in Computer Science | GPA: 3.9

Skills					
Development	Databases	Cloud Platforms	Containerization	DevOps	Data & Analytics
Java, Python, TypeScript, C++, Rust, Spring Boot	MySQL Server, PostgreSQL, MongoDB, Redis, SQLite	AWS (EC2, S3, RDS), Azure (Blob Storage, VM), DigitalOcean,	Docker, Kubernetes, Helm	Git, Jenkins, Terraform, Ansible	Pandas, NumPy, scikit-learn, Plotly, Power BI, MATLAB, SEO, Excel, Google Sheets
