PROFESSIONAL SUMMARY

A highly motivated and detail-oriented experienced professional with around 6+ years of experience in data analysis, statistical modeling and data visualization. Adept at leveraging Python, R, and advanced data visualization tools like Tableau and Power BI to drive strategic decision-making and optimize business performance.

SKILLS

- Programming Languages: Python, R
- Data Visualization Tools: Power BI, Tableau
- Data Analysis : Excel Advanced
- Database Management: MySQL, SQL Server, PostgreSQL
- Soft Skills: Problem-solving, Critical thinking, Communication, Teamwork
- Cloud Services: Amazon Web Services(AWS- S3, PySpark, EMR, EC2; Microsoft Azure)
- **Key Skills-** Data Analytics, Data Mining, Data Extraction, Data Visualization, Data Manipulation, Report Generation, Dashboard Management, Regression and Segmentation, Statistical Analysis, Advance Excel, Business Intelligence, MS Excel VBA, Pivot Tables

WORK EXPERIENCE

Data Analyst, California State University, California, USA

01/23 - 08/24

- Led comprehensive data collection and analysis projects to support strategic decision-making across various departments, including student enrollment, academic performance, and faculty resource allocation.
- Utilized Python for data cleaning, manipulation, and automation, creating reusable scripts to process large datasets from student records, admissions, and survey results, reducing manual data handling by 40%.
- Built and optimized complex SQL queries to retrieve and join data from multiple relational databases, ensuring the accuracy and integrity of student and institutional data used for performance reporting.
- Designed and maintained interactive data dashboards using Python enabling administrators to visualize key performance indicators such as student retention rates, graduation rates, and course success rates.
- Conducted in-depth trend analysis on student demographics, course enrollment patterns, and financial aid distribution, offering insights in resource allocation for Singelyn School of Business.

Senior Data Analyst, Cyber Security Works, India

01/21 - 08/22

- Communicated complex trends and churned drivers to a wide array of business partners with varying technical expertise from operational teams to executive audiences, both in oral presentations and via written reports.
- Engaged with other security analytics teams to analyze various threats and their effects on key business initiatives across websites.
- Built and maintained operational dashboards in Tableau to understand vulnerability caused by threats over time, enabled efficient exploratory analysis.
- Partnered closely with business collaborators (Product, Business Operations, Finance, Marketing) to identify and unlock opportunities for improved customer retention.
- Utilized machine learning techniques in Python to develop predictive models, assessing exploitability of vulnerabilities and enhancing risk management strategies.
- Presented complex security insights to internal stakeholders using Tableau, facilitating strategic, data-driven decision-making processes within the company.
- Automated data collection and reporting processes using Python for boosting operational efficiency by 30% and streamlining workflow.

Senior Data Analyst, Weddingz.in, Delhi, India

08/20 - 12/20

- Analyzed sales data using SQL and Python to develop targeted strategies, increasing venue bookings by 25% in Delhi and Noida through effective database management and data analysis.
- Built predictive models using Python to forecast sales trends, aiding in the strategic formulation of sales plans and enhancing predictive analytics capabilities.
- Created comprehensive dashboards in Power BI to monitor sales performance and pinpoint improvement areas, ensuring dynamic visualization of real-time data.
- Worked closely with the management team to implement data-driven solutions, significantly enhancing sales operations and supporting data-centric leadership.

Data Analyst, Weddingz.in, Delhi, India

04/18 - 08/20

- Managed and meticulously analyzed event and sales data using SQL and Python, optimizing venue operations and significantly increasing bookings through enhanced data wrangling techniques.
- Developed complex SQL queries to extract and rigorously analyze data from internal databases, leveraging insights for robust business development and strategic planning.
- Conducted training sessions for new managers on data analysis techniques using Power BI for elevating their proficiency in utilizing data for critical decision-making.
- Created and maintained detailed reports and interactive visualizations in Power BI for facilitating continuous strategic planning and operational enhancements across the company.

Data Analyst, Holiday Inn, Brookline, USA

08/17- 03/18

- Utilized R to conduct advanced data analysis, focusing on banquet and room sales to optimize operations and increase revenue.
- Developed predictive models using R to forecast sales trends and customer behaviors, aiding in strategic planning.
- Created comprehensive dashboards in Tableau to monitor key performance indicators (KPIs) and facilitate data-driven decision-making.
- Collaborated with the event operations team to streamline workflows and enhance operational efficiency through automated data collection and reporting processes.
- Present complex analytical findings to internal stakeholders, ensuring clarity and actionable insights for business improvement.

EDUCATION**California State Polytechnic University, Pomona**

08/22 - 08/24

Master of Science in Business Analytics

Johnson & Wales University, USA

08/15 - 08/17

MBA, Concentration in Hospitality

Institute of Hotel Management, Shimla, India

08/06 - 08/09

BS in Hospitality & Hotel Administration

CERTIFICATES

Tableau Training for Data Science- Udemy

PROJECTS**Capstone Project:** Impact of Information Opacity in M&A Deals based on Stock Payment

Methods in the U.S. market.

- Conducted predictive modeling on historical M&A data to analyze the relationship between information opacity and its effects on trading volume and stock price fluctuations (Cumulative Abnormal Returns).

Exploratory Data Analysis (EDA) : Spotify

- Analyzed Spotify data using Python (Pandas, NumPy) to uncover patterns in musical attributes like loudness, energy, and tempo, identifying trends in listener preferences.
- Created visualizations with Matplotlib and Seaborn to explore correlations between song features and popularity, providing insights into user behavior -<https://www.kaggle.com/code/adityach09/spotify-dataset>
