PROFESSIONAL SUMMARY

- Information Systems Graduate with IBM Data Analyst and Google IT Support certifications; skilled in SQL, Tableau, Python, Power BI and experienced in data analysis, process improvement, and technology support.

EDUCATION

The University of Texas at Arlington

Aug. 2022 - May 2025

Bachelor of Science, Information Systems

Arlington, TX

- **Current Cumulative GPA: 3.9/4.0**
- **Honor Roll:** Fall 2022, Spring 2023, Fall 2023, Spring 2024, Fall 2024
- **Related coursework:** software project management, systems analysis & design, data analytics & research

CERTIFICATIONS

- **IBM Data Analyst Certificate** *Coursera*
 - Gained hands-on experience with real-world data sets, dashboards, and tools like IBM Cognos Analytics
 - Developed core skills in data wrangling, analysis, and reporting using Excel, SQL, and Python
- **Google IT Support Certificate** *Coursera*
 - Developed skills in troubleshooting, networking, operating systems, and system administration
 - Gained experience using tools like Linux, command-line interface, and ticketing systems
- **CompTIA Security+ (SY0-701)** *CompTIA*

SKILLS & INTERESTS

- **Technical Skills**
 - **Data & Analytics:** Data Wrangling, Data Visualization, Dashboard Creation, Data Reporting, Excel (Pivot Tables, Function), SQL (Joins, Aggregates), Python (Pandas, NumPy)
 - **Tools & Platforms:** Power BI, Tableau, IBM Cognos Analytics, Microsoft Office Suite, Google Workspace, Wireshark, Linux
 - **IT Support & Systems:** Troubleshooting, System Administration, Networking Fundamentals, Windows & Linux OS, Command-Line Interface, Active Directory
 - **Programming:** Python, SQL, Java
- **General Skills**
 - Process Improvement, Project Support, Communication, Time Management, Problem Solving

PROJECTS

- **Titanic Data Analysis (Tableau , Excel)**
 - Analyzed Titanic passenger data to identify survival trends based on sex, age, fare paid, and location
 - Created interactive visualizations (bar charts, pie charts, etc,) to compare survivors by different factors
 - Derived insights based on the information gained from the visualizations
- **Logistics & Sales Database Management System (SQL)**
 - Designed and developed a relational database schema to support end-to-end logistics and sales operations, optimizing workflows across order tracking, employee records, and inventory management
 - Built SQL queries for data entry, retrieval, and automated reporting, improving access to metrics and reducing manual tasks by 15%
- **Emerging Technologies Trend Analysis (SQL, Python, Power BI)**
 - Used SQL to query structured datasets and analyze trends in programming languages, database usage, and developer demographics
 - Cleaned and transformed data by handling nulls, standardizing fields, and structuring tables for reporting and business rule application
 - Generated summary tables and data extracts to support visualizations in Python and Power BI
