EDUCATION

University of Michigan

Master of Science in Computer Science

Dearborn, MI

GPA: 3.8 / 4.0

Jaipur National University

Bachelor of Technology in Computer Science

Jaipur, IN

SKILLS

Programming Languages: Java, JavaScript, Python, Go, SQL, Bash, HTML, CSS

Frameworks, Libraries & Tools: Springboot, React.js, Spring Security, Apache Kafka, JUnit, Scikit-learn, Jupyter Notebook, Spark, Maven, Git, Linux, SonarQube

DevOps & Cloud: Docker, Jenkins, Kubernetes, AWS-Lambda, SQS, SNS, EBS, S3, ECS, API Gateway, CloudWatch, AWS CloudFormation

Databases: MySQL, MongoDB, PostgreSQL, AWS DynamoDB, AWS RDS, ElastiCache, Redis

WORK EXPERIENCES

Techblue Software

Gurugram, IN

Senior Software Engineer - Property reservation platform

Oct 2019 – Aug 2023

- Delivered full-stack enhancements collaborating with 12-member Agile team to a live property-lettings platform generating **\$1 M in annual** recurring revenue.
- Resolved high-priority production defects in a 250 k-LOC legacy codebase-cut customer-reported issues by 40%.
- Implemented remote methods for critical business operations and created efficient SQL queries to bulk update **100k+** live records on direct billable client request.
- Reduced technical debt by **60%** using **SonarQube** and **migrated legacy code from (Java 8 → Java 17)**.
- Implemented Spring AOP interceptor for microservices, **eliminating 500+ lines of duplicate code** and cutting mean-time-to-recovery 85% by capturing **100%** of method calls, returns, and exceptions.
- Conducted peer code reviews and managed deployments in the QA and UAT environments.

Oodles Technologies

Gurugram, IN

Associate Developer - Crypto trading platform

Apr 2018 – Oct 2019

- Implemented Microservice Architecture for a cryptocurrency trading platform, designing **Swagger-documenting Restful APIs** incorporating **SOLID principles**.
- Integrated **Spring Security** with role-based **JWT authentication**, **securing 100%** of REST endpoints.
- Integrated third-party library to implement customer verification functionality reducing manual verification efforts by 90% and secure document storage system using **Amazon S3**.
- Added sign-up OTP verification via a third-party SMS gateway, blocking **95%** of fraudulent registrations and ensuring every new account is phone-verified.
- Implemented unit tests utilizing **JUnit** framework and Sleuth for tracking logs.

PROJECTS

Full Stack Web Socket Chat App | React 18, TypeScript, Tailwind CSS, Spring Boot 3, PostgreSQL

- Built a real-time WebSocket chat app with Java back end and React 18 front end, using STOMP + JWT for secure 1-to-1 and group messaging, and Redis Pub/Sub fan-out, supporting horizontal scaling to 10 k concurrent connections in load tests.

Real-Time Clickstream Analytics Platform | Java 21, Docker, Apache Kafka, Redis, Kafka

- Built a real-time clickstream pipeline: Spring Boot collector posts JSON events to Kafka, reliably ingesting 5 M+ clicks per day. Containerized the stack (Kafka + Redis + Prometheus/Grafana) with Docker Compose and exposed Micrometer metrics for live throughput and lag dashboards.

Concurrent HTTP Server for Large File Transfers | Netty zero-copy NIO, Docker, Kubernetes

- Developed a concurrent HTTP server for large file transfers using a custom TCP-like protocol.
- Implemented packet segmentation, acknowledgment, and retransmission to ensure efficient data transfer.
