EXPERIENCE

Data Analyst

Pacific Investment Management Co, Newport Beach, CA

Sep 2024 - Present

- Designed and deployed Tableau dashboards to monitor portfolio liquidity metrics (current/quick ratios) and credit default probabilities, enabling real-time exposure tracking and reducing manual compliance reporting by 40%.
- Built a logistic regression model in Python to predict corporate bond defaults using financial ratios and macroeconomic indicators, improving early warning accuracy by 19% and supporting risk mitigation decisions across test portfolios.
- Constructed scalable ETL pipelines using AWS to unify financial datasets from 6+ internal sources, improving reporting speed by 65% and enhancing the reliability of fund performance analytics.
- Automated fund-level performance and risk reporting by integrating SQL workflows with Snowflake, cutting manual effort by 75% and streamlining delivery to the strategy team.
- Simulated macroeconomic stress scenarios on 100K+ fixed income instruments using Python and identified risk patterns that informed senior analysts' hedging strategies in quarterly portfolio reviews.
- Built investment modeling tools based on CAPM and Black-Litterman frameworks to support exploration portfolio allocation analyses, improving Sharpe ratios by 12% in scenario testing environments.
- Collaborated with cross-functional teams to translate complex analytics into presentation-ready insights, while documenting workflows and creating onboarding resources to enhance knowledge sharing across finance, strategy, and data science teams.

Data Analyst

Apex infolab, Bengaluru – INDIA

July 2020 – Dec 2022

- Automated global KPI reporting workflows using Excel VBA, Power Query, and Alteryx, cutting monthly reporting time by 70% and significantly improving report accuracy across 5 international sales and operations regions.
- Built SQL-based data pipelines integrating SAP ERP, CRM, and MES systems, eliminating 60% of manual work and enabling real-time dashboards that helped cross-functional teams make faster, more informed decisions.
- Developed demand forecasting models using Python (Prophet, statsmodels) to predict infotainment product sales trends, improving forecast accuracy and directly supporting inventory planning decisions in collaboration with supply chain teams.
- Designed Tableau dashboards for 100+ users across Sales, Operations, and Finance, surfacing KPIs like OTIF and service levels; reduced ad-hoc reporting by 50% and shortened decision cycles by 40%, as tracked through internal usage metrics.
- Implemented an AWS analytics pipeline (Athena, Lambda, S3, Redshift) to deliver daily performance and warranty insights, helping operational leads stay on top of service SLAs and reducing reporting latency across business units.
- Audited and rebuilt legacy reporting workflows in SQL and Excel, resolving data integrity issues and ensuring accurate financial KPIs for QBRs, compliance reports, and board-level reviews.
- Standardized KPI definitions and dashboards across teams and geographies, reducing conflicting metrics by 35% and helping leadership align on enterprise-wide performance indicators.
- Led root-cause investigations into EMEA supply chain disruptions using SQL and anomaly detection techniques, helping reduce stockout frequency and guiding improvements in inventory buffer strategy.
- Analyzed customer churn patterns and loyalty behavior using SQL and Python, identifying high-risk cohorts and supporting personalized retention campaigns in coordination with marketing and product teams.
- Partnered with Product, Engineering, and Finance stakeholders to scope and deliver analytics that supported cost optimization and strategic prioritization for upcoming product launches, including executive Tableau dashboards for leadership.

SKILLS

Methodologies: SDLC (Scrum, Agile, Waterfall), ETL Pipelines, Data Modeling (CAPM, Black-Litterman), Anomaly Detection, Business gathering requirements,

Requirements Gathering & Process Analysis: Stakeholder interviews, workshops, process mapping, UML diagrams, use case development, user stories, acceptance criteria

Languages & IDEs: Python (Pandas, NumPy, Scikit-learn, statsmodels, Prophet), SQL (MySQL, PostgreSQL, Snowflake, SQL Server), Excel (VBA, Power Query, PivotTables, VLOOKUP, INDEX-MATCH), Jupyter Notebook, PyCharm, Git, GitHub, Visual studio

Frameworks & Libraries: Scikit-learn, Power Query, Anaconda

Databases: MySQL, PostgreSQL, SQL Server, Oracle RDBMS (schema design, indexing), NoSQL (MongoDB, DynamoDB)

Cloud Technologies: AWS (Redshift, S3, Lambda, Athena, Glue), Databricks, Azure, snowflake

Developer & Visualization Tools: Tableau, Alteryx, SSIS, SSRS, Power BI, JIRA, CI/CD, Docker

Soft Skills: Critical thinking, analytical mindset, effective communication, stakeholder management, cross-functional collaboration, problem-solving, time management, adaptability, emotional intelligence

EDUCATION

MS in Business Analytics | California State University East Bay, Hayward, CA - USA

B.Tech in Electrical and Electronics | Amrita School of Engineering, Amrita Vishwa Vidyapeetham - Bengaluru, Indi
