EDUCATION

University of Phoenix

2024 – Present

Bachelors of Science Management Information Systems

EXPERIENCE

Implementation Consultant, NeoCognify AI

July 2023 – Present

- Led full-cycle SaaS implementations across 35+ SMB and enterprise clients, covering requirements gathering, business process analysis, software configuration, and post-go-live support—mirroring workflows used in platforms like Kahua, Procore, and other PMIS systems.
- Acted as primary client liaison during onboarding and deployment, translating operational needs into technical specifications and managing multi-stakeholder communication across 3+ regions.
- Conducted 50+ discovery calls and 30+ live product demos, delivering role-specific user training that increased initial adoption rates by over 65% within the first month.
- Drafted and executed 25+ Statements of Work (SOWs); maintained 95% on-time delivery rate across implementation projects while continuously improving client satisfaction through structured feedback loops.
- Resolved over 200 technical escalations, overseeing identity and security workflows using SentinelOne, Barracuda, JumpCloud, and Datto—achieving 99.9% endpoint coverage and zero critical breaches during tenure.
- Authored and maintained 50+ pages of internal documentation and training guides using Confluence and Freshworks; trained 100+ users across departments on best practices and new feature rollouts.
- Used basic SQL and internal reporting dashboards to generate performance metrics, supporting monthly executive reporting and surfacing usage insights that helped drive upsell opportunities.
- Configured and supported core modules within Kahua, including document control, cost tracking, and workflow automation, in collaboration with clients transitioning from legacy systems. Participated in system testing, user training, and feedback collection to improve rollout outcomes for construction-focused implementations.

Enterprise Cloud Specialist, Gladinet

May 2020 – July 2023

- Supported end-to-end implementation of secure file access solutions (Triofox/CentreStack) for clients in construction, engineering, and MSP sectors.
- Led technical onboarding and training for 50+ clients, including walkthroughs on Active Directory integration, permission controls, and cloud migration best practices.
- Collaborated with IT, project managers, and field teams to resolve sync issues, access gaps, and infrastructure compatibility during rollout phases.
- Configured folder structures and role-based access workflows to align with document control needs in industries with compliance and audit requirements.
- Authored product documentation, demo videos, and how-to guides used by clients and internal teams, accelerating adoption and reducing support ticket volume by 30%.
- Analyzed customer usage patterns to surface optimization opportunities and identify implementation risks; contributed to upsell and renewal strategies through consultative feedback.
- Worked with support platforms like Zendesk and Jira to triage and resolve escalated implementation issues, consistently meeting internal SLAs.

PROJECTS

StreamAnalytics Pro | Python, Flask, PostgreSQL, Machine Learning

2025

- Architected and developed a comprehensive web-based streaming analytics platform with advanced viral moment detection capabilities, processing live video streams and chat data simultaneously across multiple threads
- Implemented sophisticated multi-signal fusion algorithms combining IRC-based chat monitoring, video/audio analysis, and social proof analytics to achieve 85%+ accuracy in viral content

identification

- Engineered robust stream buffer management system using FFmpeg integration, supporting continuous recording with automatic segment rotation and ad-aware content filtering
- Built machine learning pipeline with adaptive sensitivity controls and user feedback loops, enabling system to learn from user preferences and improve detection accuracy over time
- Developed cross-platform export functionality with automated optimization for YouTube, TikTok, and Twitch, including metadata embedding and format-specific encoding
- Created responsive Flask web application with real-time analytics dashboard, WebSocket integration for live updates, and RESTful API endpoints for seamless user experience Integrated advanced error handling, connection resilience, and automatic recovery mechanisms to ensure 99%+ uptime during extended streaming sessions

TECHNICAL SKILLS

Support Systems: JIRA, Zendesk, Freshworks, Confluence

Security & Monitoring: SentinelOne, Datto RMM, Barracuda Networks, Kaseya VSA

Cloud & Identity: AWS, Active Directory, JumpCloud, Entra ID, Wasabi

Development & Tools: Git, JavaScript, QA Testing, Python, SQL
