

Aidan Berman

Rockville Centre, NY | aidanjberman@gmail.com | (516) - 265 - 5971 | [LinkedIn](#)

EDUCATION

State University of New York at Oswego

Oswego, NY

Bachelor's of Arts, Computer Science

2021 - 2025

Minor in Business Administration

Relevant Coursework: Software Engineering, Data Structures and Algorithms, Security and Cryptology, Artificial Intelligence and Heuristic Programming. Artificial Intelligence Programming Languages, Business Management, Accounting as a Tool, Sales and Marketing Technology

WORK EXPERIENCE

Jericho Terrace

Mineola, NY

Hospitality Service Associate

2021 - Present

- Efficiently catered to customers in a professional matter by attending to their needs
- Professionally trained new employees upon arrival to ensure success for their future

Cyclone Robotics

Rockville Centre, NY

Head Programmer

2017 - 2021

- Planned, implemented, debugged, and tested programs for VEX robotics competitions
- Thoroughly trained individuals to collaborate in the process of programming

Accomplishments:

- Competed across New York state competitions four years in a row
- Qualified for the National competition in Council Bluffs Iowa (2020)

SKILLS

Computer Science Skills: Java, Python, JavaScript, HTML, css, Data Structures, Algorithms, Cryptology, NodeJS, Software Engineering Process Management,

Business Administration Skills: Business Plans, Google Advertising, Salesforce, Balance Sheets, Budgeting, Word, Excel, Powerpoint, Access, Data Analysis

Soft Skills: Communication, Public Speaking, Problem Solving, Adaptability, Leadership

PROJECTS

- **Connect 4 with Powerups:** Players have a choice between playing against a difficulty ranged AI or other players. The server-side was implemented using JavaScript, sockets, and NodeJS. The client-side was implemented using React and other installable libraries. The game itself is simply Connect 4, but both players start the game with three unique power ups which can alter the state of the game entirely throughout the duration of the match. The thought behind this was taking a beloved game and turning it into a strategic game.
- **Spotify 'Better Shuffle':** The idea for this project was to create a better shuffling system for Spotify using Spotify Dev-Tools. Spotify's shuffling system is repetitive and hardly based on user feedback. This program allows the users songs to be compared with similar songs based off of the same genre, artist, and album.
- **Yelp Business Similarity Finder:** This project uses several advanced topics in programming such as Hashmaps, algorithms, parsing, and clustering data from millions of business records stored within a JSON file. The concept of this project is to find similar businesses based on categorical data which is parsed and run through a similarity metric. This project also allowed me to create a user interactive GUI to handle functionary requirements aimed towards the users input.
- **Java Back-End Zoo Manager:** This project takes the idea of managing information regarding animals within a fictionalized zoo. It demonstrates the process of finding, adding, removing, and outputting data based on different categorical clusters such as name, id number, date of birth, and more within a large JSON file.
- **The Berman Banking System:** Currently doing research into creating a non deployable project for myself which allows money to be transferred to different accounts. This will be done by requesting payments and receiving payments. The target for this project is to create a fully user interactive experience rather than glorify the back end of the project.

CERTIFICATIONS & ACHIEVEMENTS

- | | |
|---|---------------------|
| ● Salesforce Trailhead Adventurer Rank | March 5th, 2024 |
| ● Google Advertising Certification | February 19th, 2024 |
