

AIDAN BORKAN

DATA ANALYST

Email:
aidanborkan@gmail.com

Phone: (781) 408 1099

GitHub:
<https://github.com/aidanborkan>

LinkedIn:
www.linkedin.com/in/aidan-borkan/

Education:

University of Colorado – Denver
Master of Science, Biomedical
Science and Biotechnology (2024)

University of Wisconsin – Madison
Bachelor of Science, Biology (2019)

Skills:

Detail-Oriented

Technical Communication

Problem Solving

Experimental Design

Data Processing & Visualization

Statistical Analysis

Programming & Analytics:

R

Python (Pandas, NumPy, Polars)

SQL

Shell Scripting in Bash/Linux

GitHub

Docker

Professional Summary:

Data science professional with eight years of research experience, including two in computational biology. Expertise spans ETL pipeline and dashboard development and data visualization in Python and R, with SQL to query metadata. Team-oriented and excels in communicating complex findings to non-technical audiences with scientific rigor.

Work History:

University of Colorado School of Medicine

Aurora, CO

Student Assistant VI

(February 2024 – December 2024)

- Developed bioinformatic workflows for Antivenomics and compound discovery using Limited Induced Proteolysis and Proteome Integral Solubility Alteration assays.
- Mapped venom protein binding sites at 10-amino-acid resolution via DDA/DIA mass spectrometry, enabling drug repurposing efforts for pharmaceutical collaborators and advancing clinical decision-making for antivenoms and small molecule inhibitors.
- Engineered a Docker containerized R Shiny application to interpret mass spectrometry data for non-coding research professionals.
- Optimized a machine-learning model by tuning algorithmic hyperparameters for a linear regression to predict protein abundance from genomics data, increasing predictive potential by 13%.
- Streamlined collaborative workflows using Git for version control, increasing research reproducibility.

Student Assistant III

(July 2022 – February 2024)

- Analyzed mass spectrometry biostatistics in Python and presented results through a Streamlit web-based application.
- Coded a thermal proteomic profiling bioinformatic pipeline to investigate ligand-induced AC16 cell line protein fluctuations.
- Determined the elimination constant EC50 and degradation kinetics of GSK-3 $\alpha\beta$ protein through data modeling with curve fitting.

Tempus Labs, Inc.

Chicago, IL

Molecular Technologist I - RNA

(August 2020 – July 2022)

- Performed Next-Generation Sequencing assays on tumor samples, streamlining processing workflows using automated platforms.
- Increased sample throughput by 100% while maintaining stringent quality control standards.
- Conducted qPCR testing of clinical Covid-19 samples at scale.
