PROFILE

Results-driven scientist with a M.S. in Biomedical Informatics and extensive experience in analytical testing, data analytics, and quality systems within diagnostics, cell and gene therapy, and GMP manufacturing. Proven ability to design and execute experiments, analyze complex datasets, and lead cross-functional projects that drive scientific innovation. Skilled in utilizing experimental design, complex data analysis, and cross-functional collaboration while driving innovation and ensuring regulatory compliance. Seeking to contribute expertise in quality and data analytics to drive operational excellence in the healthcare, biotechnology, and pharmaceutical industries. Currently in pursuit of PMP and CPC certifications anticipated completion November 2025.

EDUCATION

**Rutgers, the State University
Of New Jersey**

2022-2024

M.S. Biomedical Informatics

**Rutgers, the State University
Of New Jersey**

2016-2020

B.A. Neurobiology and
Behavior

EXPERIENCE

Bioanalytical Quality Control Scientist- Flow Cytometry Associate- Bristol
Myers Squibb

07.2024 – present

Perform routine testing of samples for release and stability, and ensure testing performed is reported within the most efficient timeframe on two commercialized cell therapy products, Breyanzi and Abecma, and four analytical and flow cytometry methods with a 99% validity rate.

Review GMP documentation and perform data verification.

Data entry, mining, analysis and trending using FlowJo, JMP, Excel.

Support document revision, project, CAPA, deviation/investigation-related tasks and/or continuous improvement efforts.

Identify and implement lab process improvements and lean initiatives.

Valgenesis author and executor, generate and perform PQ on Miltenyi MacsQuant.

Veeva document owner and approver.

Analytical characterization of viral vectors for commercial LVV-based products.

Prepare reagent aliquots and media for use in cell-based assays.

Ensure compliance with current GMP, required regulatory standards, conforming to company policies and standard operating procedures (SOPs).

Associate Scientist- Quality Control/ Raw Materials/ Microbiology, Catalent
Pharma

02.2022 - 07.2024

Subject Matter Expert PCR, pH meter.

Skilled application of FDA guidance, 21CFR, USP, ICH, SDLC, and other regulatory applications in a GxP environment.

 - Interoperability

Lean Six Sigma Yellow Belt recipient

Perform routine clinical-stage batch, raw material, in-process, and CAR- expression assays using Flow Cytometry, qPCR, ddPCR, viability, ELISA, Endotoxin, Bac-T, mycoplasma, growth promotion, sterility, environmental monitoring and compendial tests i.e. pH, osmolality, appearance.

Advanced proficiency in equipment qualification procedures, developing maintenance and calibration schedules, performing IQOQ, preventative maintenance, verification and calibration of laboratory equipment in a cGMP environment.

Develop an electronic based inventory management system of equipment and materials in the QC lab.

Conduct training sessions for QC lab personnel on the operation, maintenance, and cleaning of laboratory equipment.

Functional familiarity with utilizing cGMP, GDP, GLP, GCP and GAMP to author SOPs, Device Impact Assessments, System Impact Assessments, Computer System Validation, method validation, and instrument qualification reports along with drafting and reviewing raw data, laboratory OOS, CAPA, Change Control and Deviation investigations through TrackWise.

Expertise in maintaining cleanliness and sterility in controlled environments, donning and doffing cleanroom attire, and microbial sampling according to industry protocols.

Expertise in data entry and data analysis in MS programs.

Ensure accurate recording of data into an Electronic Laboratory Notebook (ELN) system like LIMS, maintaining precise documentation for compliance and reproducibility.

Medical Laboratory Technologist, Omnia Diagnostic Services

11.2020 - 02.2022

Prepare in-house working and spiking calibrators, QC check, buffers, and other required reagents, and disposing of waste according to industry standards and state regulations.

Maintain electronic health records, accurately interface data and maintain HIPAA requirements.

Prepare, extract and pipette samples into 96-well plates for urinalysis and urine drug screening and perform LC/MS confirmatory testing for Detox counseling center clients.

Quantitate and analyze specimens using Agilent Technologies software.

Perform routine maintenance on LC/MS instruments such as check tune, autotune, changing columns and guards, and troubleshoot LC instruments.

Rapid and qPCR testing of COVID-19 samples using BD Veritor and Applied Biosystems 7500 Fast RT-PCR instruments.

Train Lab Assistants on execution of lab tests and procedures.

Draft and develop documents, SOPs and training programs.

Process human blood samples for various assays, including experience with PBMCs. Conduct RNA extraction and cDNA synthesis for molecular analysis and diagnostic purposes.
