PROFESSIONAL SUMMARY

Results-driven **Business Operations Associate** with over 2+ years of experience optimizing operations, product strategy, and customer engagement across **healthcare, e-commerce, and fintech domains**. Skilled in building **ETL** pipelines, creating **KPI** dashboards, and streamlining workflows using **SQL, Python, and Power BI**. Adept at managing cross-functional projects using Agile methodologies, **Jira**, and **Confluence**. Proven track record of enhancing claim processing, inventory planning, and user experience through **data-driven insights**. Passionate about solving complex business problems and driving scalable solutions. **Actively seeking opportunities** to contribute to impactful, data-driven business solutions.

WORK EXPERIENCE

COMMURE

San Francisco Bay Area, CA

Business Operations Associate

Nov 2024 - May 2025

Worked in operations for the claim lifecycle process, which encompasses the process from a patient booking appointments [generated as encounters on Insights after claim submissions to claims bucketed under denials and rejections], targeting a successful approval rate and uniform quarterly collections.

- **Reduced delays in processing high-value insurance claims by building tracking dashboards in Retool** and streamlining team coordination through a centralized **Notion** knowledge base, ensuring progress aligned with quarterly business goals and improving resolution consistency of stuck Dollar value on a week-over-week basis to **2.5%**
- Utilized **R** programming to analyze large datasets and extract actionable insights, increasing data processing efficiency by 30%
- Designed professional, visually appealing **PowerPoint** presentations to effectively communicate complex data and insights to stakeholders
- Developed and optimized complex **SQL** queries to extract, manipulate, and analyze data from various databases, supporting decision-making processes for clinical trial management
- Automated repetitive tasks using **Excel** macros, improving efficiency in data processing and reporting activities for clinical trial assessments
- Built and deployed data analysis and automation scripts in **Python**, leveraging libraries like Pandas, NumPy, and Matplotlib to deliver comprehensive insights and visualizations
- **Applied agile project management methodologies** to reduce task inefficiencies, improve **cross-functional collaboration**, and accelerate the resolution of day-to-day operational issues
- Managed and resolved claim denials and rejections for high-revenue clients, collaborating with the offshore team members to identify and address recurring issues, thereby ensuring a steady state for collections through timely issue resolution and enhanced process efficiency
- Developed a standardized framework using **SOPs** to implement an effective mitigation plan across the processing of claims per stage, facilitating **cross-functional collaboration** and ensuring **timely resolution for relevant stakeholders**
- Generated **ad hoc reports using PostgreSQL** to identify gaps in existing metric-centered views and uncover patterns across site-payor combinations, enabling the development of a standardized approach for resolving claims, including those necessitating direct outreach to the payor for follow-up

FLIP

Los Angeles, CA

Product Management

Mar 2024 - Aug 2024

Led initiatives in e-commerce drop shipping business model operations, setting a focus on product, analytics, and strategy.

- Developed a comprehensive **Google Site for employees onboard**, which covered all elements of Magic OS
- **Created a starter template** using **Whimsical** and **Confluence** to bucket recurring bugs which can be resolved, and the ones which would need to be included in sprint cycles / better sense into categorizing **Jira** tickets of High, Medium, and Low priorities using **JQL**
- Spearheaded the development and launch of a 'Deals' creation tool, collaborating with engineering to replace manual CSV uploads, increasing brand deal creation

- Optimized customer service chat automation, reducing human intervention by 50%, by leveraging **KPI-driven dashboards** and analyzing **2,000 customer interactions** with **Looker** and **Excel** to identify and prioritize automation improvements, and to configure which type of order flow requires a fixed SLA

CEPHEID

Global Supply Chain Management

Sunnyvale, CA

May 2023 - Aug 2023

Spearheaded enhancements in the material requirement planning team to uphold metrics and increase operational efficiency of logistics processes

- Performed **ABC Analysis** of current materials in stock using **Excel**, keeping in check of Danaher business standards, in an effort to improve **inventory turn ratio** for Kanban card resizing using Danaher's costing framework
- Using **SAP** shortcuts, for materials that are close to expiry and hit the reorder point, in sync with what is tracked in **Power BI** Dashboards
- **Agile methodologies** are employed to figure out across GSCM departments, to understand the decomposition of how each reagent, beads, are labeled, required in the end-to-end process of cartridge development

CLEARTAX

Product Analyst

Bangalore, India

May 2021 - Jun 2022

Employed techniques for maintaining product metrics and mapped out process flows for business stakeholders

Project 1: Ingestion System for documents that are needed for tax purposes

- Monitored current ingestion metrics, which included upload and processing speed and time[P90, P50, P10] on a WoW basis, also testing the front end [front end event clicks] event flow to analyze customer dropoff and reduction in downtime for Cleartax users [Enterprise, SME]
- Worked to improve downtime per customer while uploading and parsing files, deep diving into system failure logs to get information regarding how frequently this occurs, what steps remain incomplete, leading to an unhappy customer
- Customer dropoff analysis using **Google Sheets** and **Whimsical** to prioritize feature implementation and operational enhancements, feature request implementations, monitoring success rate of the user journey from when a customer clicks to upload files to reaching the confirmation page, will also account for click-through rates per user sessions
- Supported ClearTax's Compliance Suite operations, which covered Clear GST, E-Invoicing, and TDS by building dashboards in Amazon Quicksight using data sources of Metabase and incremental datasets from Retool
- Metrics related to Usage, Retention, Activation [based on customer subscription category]
- Data orchestration from converting unstructured to structured data [transformation source for derived tables[from S3 to Metabase], uniform bucketing on Metabase of derived tables, upload of Excel sheets to Metabase, ensuring data sanctity, and eventual metrics to track during the migration process

Project 2: VOC, Customer Support Improvements

- Examining Salesforce's ticket feedback raised through the "Help" option for feature corrections and handling customer issues, using Gitbooks as a knowledge bank for user support articles
- Customers facing any pain points up until reaching the confirmation page would have to click on the "Support Button", which would lead to the next modal screen where a user can input information about where they need guidance
- Support channel improvements for the bundle of products covering subscription packages ranging from high-revenue projected clients using Salesforce to track customer service lifecycles [Case Management based on SLA] and sales lifecycles [Stage of Opportunity Won/Closed]

Project 3: Data Quality [Enterprise /SME Customer; Category of Focus]

- Supported ClearTax's Compliance Suite operations, which covered Clear GST, E, and TDS by building dashboards in Amazon Quicksight using data sources of Metabase and incremental datasets from Retool; upkeep L1 metrics of customer segmentations [wallet share, churn, ARR, activation]
- Improvements in the content articles employing Google Analytics for SERP ranking and average traffic of customers to eventually increase lead conversion and click-through rates using WordPress, eventually enhancing the net promoter score

- Data migration and identifying gaps with current sources to ensure structured data is housed under one warehouse for Clear One [in order to maintain data latency]
- Ad hoc reports for the Licensing Sales team to update plan validity/ plan activation and subscription memberships; email marketing and customer adoption metrics [sent, opened, CTA clicked using SendGrid]
- Setting up North Star metrics and ad hoc reports for Workspace Authorization, Single Sign On, and Licensing using Amazon Quicksight, S3, and Metabase; including the feature changes deployed in a production environment
- Assessing the viability of using Crisp Chat as a customer inquiry option, which included deep diving into which options are regularly selected by the users, to eventually track the active usage and customer satisfaction

PROJECTS

NYC Property Tax Record Fraud Detection

- Worked on data from Property Valuation and Assessment Data of the NYC government (Unlabeled). Visualized and filled in missing values for each of the 32 data fields. Created an additional 45 Fraud algorithm variables to aid in detecting outliers for Unsupervised Learning
- Used PCA for dimensionality reduction. Generated 2 fraud scores using z-score and autoencoders, then combined the scores to rank and analyze the top outlier records

Credit Card Fraud Detection

- Used Credit card application data (1 million records) to detect fraud records. Created candidate variables and used filter methods (Kolmogorov-Smirnov, Fraud Detection Rate at 3%) and wrapper methods to eliminate variables
- The base model Logistic Regression caught 52.6% of fraud records. Compared Boosted Trees, Neural Network, and Random Forest. Random Forest achieved the highest accuracy of 62.3%

SKILLS

- **Databases:** Snowflake, Microsoft SQL Server, MySQL
- **Programming Languages:** Python (NumPy, Pandas, Matplotlib, Scikit-learn), Power Query, DAX
- **Tools & Libraries:** Excel, PowerPoint, JIRA
- **Data Visualization:** PowerBI, Tableau, Tableau Prep Builder, Alteryx
- **Machine Learning:** Supervised ML (Linear and Logistic Regression, Decision Trees, RF, Xgboost), Unsupervised ML (K-means, PCA), Classification techniques (binary classification, multi-class classification), A/B testing

EDUCATION

UNIVERSITY OF SOUTHERN CALIFORNIA

MS in Business Analytics

Los Angeles, US

Aug 2022 - May 2024

MIT WPU

B.Tech (Hons.) Mechanical(GPA: 4/4)

Maharashtra, India

May 2017 - Jun 2021
