SUMMARY

Detail-oriented and data-driven professional with strong proficiency in data cleaning, statistical analysis, and data visualization using SQL, Python, Power BI, and Excel. Experienced in deriving actionable insights, automating reports, and presenting findings to non-technical stakeholders. Demonstrated ability to collaborate with cross-functional teams and apply data storytelling for strategic improvements. Passionate about leveraging data for data-driven decision-making in dynamic environments.

EDUCATION

Saint Louis University, MO, USA

Master of Science in Information Systems

Aug 2023 – May 2025 | GPA: 3.8/4

Nagpur Institute of Technology, India

Bachelor of Engineering in Electronics & Telecommunication

GPA: 8.26/10

PROFESSIONAL EXPERIENCE

Saint Louis University – Missouri, United States

International Recruitment & Admission Data Analyst Representative

Jul 2024 – Present

- Extracted, cleaned, and validated student application data using SLATE CRM, Excel, and Power BI to support admissions reporting.
- Developed interactive dashboards and visualizations for recruitment and enrollment trends, enabling better decision-making.
- Collaborated with international admissions and marketing teams to refine student communication strategies based on data insights.
- Automated reporting processes, improving operational efficiency and reducing manual errors.
- Ensured data accuracy and integrity through quality checks and documentation.

Varcus Technologies Pvt Ltd. – Nagpur, India

Python & Java Developer Intern

Jan 2021 – Jan 2022

- Cleaned and transformed large datasets from SQL/NoSQL databases, contributing to internal tools that enhanced reporting accuracy.
- Created backend functionalities using Python (Flask/Django) for a healthcare website, enabling real-time patient data tracking.
- Supported development of data-driven systems for patient management and appointment scheduling.
- Worked on Java-based modules, increasing reliability and performance of backend applications.

ACADEMIC PROJECTS

- Pinduoduo Case Study: Built a project website analyzing its team purchase model using SWOT analysis and digital transformation strategies.
- Healthcare Dashboard: Designed a Power BI dashboard to forecast medical inventory demand using synthetic data to reduce costs.
- Sales Pattern Analysis: Used SQL and Power BI to identify sales trends and suggest optimizations for PriceCo's performance.
