EDUCATION

University of Kansas-Medical Center

M.S. Applied Statistics, Analytics and Data Science

Dec 2025

Kansas City, KS

University of Wisconsin-Madison

B.S. Neurobiology

Dec 2021

Madison, WI

WORK EXPERIENCE

Elephas

Apr 2024 - Present

Associate Scientist III

Madison, WI

- Developed comprehensive SQL queries to report key metrics such as tumor size and tissue quality, optimizing downstream experimental processes.
- Built interactive PowerBI dashboards to visualize metrics such as number of samples received daily and from which site. Weekly reporting of these metrics to R&D leadership team to facilitate leadership decision-making and resource allocation for upcoming experiments.
- Used Python to create tissue masks to highlight live tissue cells and calculate area. Automated data analysis enhanced operational efficiency, resolving data discrepancies and improving data quality.
- Performed and led independent analyses of in vivo and ex vivo studies to understand treatment efficacy.
- Performed flow cytometry and Luminex assays to identify statistically significant trends in the data.
- Used R and Tableau to analyze and create summary visualizations of large datasets.

Aug 2023 – Mar 2024

Associate Scientist II

Madison, WI

- Developed independent protocols to improve lab efficiency, contributing to overall project success.
- Evaluated nonconforming data and implemented corrective measures, ensuring compliance with relevant regulations and company procedures.

Jun 2022 – Jul 2023

Associate Scientist I

Madison, WI

- Analyzed and visualized experimental data using R, contributing to weekly team updates meetings.
- Kept accurate and timely records in electronic laboratory notebook.
- Handled and processed live biological specimens safely and free from contamination in tissue culture.

Carbone Cancer Center

Dec 2018 - Dec 2021

Undergraduate Research Assistant

Madison, WI

- Conducted treatment studies to identify effective chemotherapies and develop new treatment strategies for colorectal cancer using statistical models.
- Development of patient derived cancer organoids (PDCOs) to predict therapeutic response. Used survival analysis and data visualizations throughout this project.
- Characterized PDCOs' metabolic response using optical metabolic imaging.
- Clinical investigation of pevonedistat efficacy in metastatic colorectal cancer.
- Used statistical analysis to make evidence-based recommendations to patients undergoing chemotherapy

SKILLS

- SQL
- Python
- R
- PowerBI
- Tableau
- SAS
