

Aishwarya Lingam

lingam.aishwarya@gmail.com · (234) -282-9764 · [Linkedin](#)

Automation-focused QA Engineer with 6 years of experience designing and executing UI, API, and mobile automation using Cypress, Playwright, Selenium-Java, REST Assured, and Appium. Integrated frameworks into Jenkins CI/CD pipelines with GitHub version control, enabling faster releases and high-test reliability across cloud and on-prem environments

EDUCATION

Kent State University

Master of Science, Business Analytics | GPA: 4/4

Projects: Performance Dashboard with Power BI [Data Visualisation]; Customer Insights Analysis using Tableau [Data Mining]

KENT, OH, US
December 2025

Jawaharlal Nehru Technological University

Bachelor of Technology, Electronics and Communication Engineering | CGPA: 7.19/10

Projects: Automatic Vertical Car Parking System [Embedded Systems]; Banking Operations Simulator using C [OOP]

Hyderabad, India
May 2017

SKILLS

Programming & Scripting: Java, JavaScript, Python, R, SQL, Linux, Excel.

Testing & Automation: Selenium WebDriver, Playwright, API Testing (Postman, REST Assured), Sauce Labs, Security & Accessibility Testing (JAWS 508), Smoke Testing, SOAPUI (basic), Sanity Testing, and Mobile Testing, Performance Testing (JMeter), Appium.

Test Management & CI/CD: Jira, HP ALM, Jenkins, Git/GitHub, AWS (basic CI/CD and test deployment exposure), TestRail, Agile/Scrum.

Data, Methodologies & Soft Skills: Power BI, Tableau, Agile, Functional & Regression Testing, Project Management, Team Collaboration.

WORKEXPERIENCE

6YEARS

Oracle India Private Limited

Hyderabad, India

Quality Assurance Analyst (Automation)

September 2021 – March 2024

- Created and executed 350+ functional and regression test scenarios in HP ALM for Oracle EPCM workflows, ensuring end-to-end validation of allocation rules and financial data models, which increased test coverage by 25%.
- Performed end-to-end data migration from PCM to EPCM by validating 100% of financial dimensions, allocation rules, and fact tables through SQL reconciliation and ETL verification, reducing data variance errors by 30% and ensuring accurate profitability.
- Built a Cypress End-to-End automation framework using JavaScript with POM and JSON-based data-driven testing, increasing test reusability and execution efficiency by 40% across UI and API workflows.
- Integrated automated test suites into Jenkins CI/CD pipelines on AWS, improving test scalability and reducing deployment validation time by 30% through continuous integration.
- Used GitHub for version control and branch-based collaboration of Cypress automation scripts, enabling seamless code reviews, reducing merge conflicts by 35%, and supporting CI-triggered test execution through Jenkins.
- Performed load and stress testing in JMeter by simulating 500+ concurrent users and analysing response time, throughput, and bottlenecks, improving overall system performance by 20%.
- Validated UI accessibility using JAWS screen reader against Section 508 & WCAG guidelines, increasing compliance coverage by 45% and reducing usability defects for visually impaired users.
- Performed RESTful API testing using Postman and REST Assured by validating request/response payloads, headers, and status codes with SQL-backed data verification, increasing API reliability by 25%.
- Automated end-to-end mobile test scripts using Appium for both Android and iOS devices, increasing cross-platform test coverage by 30%.
- Extracted allocation, profit, revenue, and loss distribution data from EPCM using SQL queries, validating 100% of financial flow across business units for accuracy and audit readiness.
- Built an interactive Power BI dashboard that revealed a 15% revenue gap and 12% cost leakage trend, enabling leadership to target high-impact optimisation areas for the next fiscal cycle.
- Delivered end-to-end EPCM workflow KT sessions for junior QA members and documented the process in Confluence, reducing onboarding time by 40%.
- Deployed the latest test build to QA and OCI environments using Linux shell commands and automated scripts, reducing build deployment time by 30%.

Infosys Limited

Hyderabad, India

Software Test Analyst (client: UnitedHealth Group (UHG))

December 2019 - September 2021

- Designed 250+ requirement-based test cases (positive, negative, edge conditions) from BRD/FRD docs, improving defect prevention rate by 28% through early test design coverage.
- Actively contributed to daily Scrum sessions to review story updates, confirm acceptance criteria, and define test scope, accelerating sprint delivery by 15%.
- Managed test planning and execution in TestRail, expanding test coverage and accelerating defect resolution by 25%, while ensuring complete validation of business workflows and improving release quality by 20%.
- Utilised Visual Studio Code for writing and debugging Playwright automation scripts, improving script execution efficiency by 18%.
- Built a scalable Playwright automation framework using the Page Object Model (POM) with reusable CSS/XPath locators. Improved cross-browser execution efficiency by 35% and reduced overall maintenance effort.
- Identified and stabilised flaky test cases by implementing wait strategies and retry logic, reducing intermittent failures by 40%.
- Configured Playwright to capture screenshots only on failure, cutting execution storage usage by 60% while improving defect debugging accuracy.
- Generated detailed Playwright test reports in HTML and Allure formats, enabling faster triage and a 30% improvement in test result traceability.
- Used Confluence to document sprint-wise QA scope, test coverage, and release sign-offs, while linking BRD/FRD and TestRail assets to improve traceability and team collaboration by 30%.
- Performed SOAP and REST API testing using SOAPUI, validating XML requests and assertions to ensure data integrity, improving API reliability by 25%, and enabling early defect detection across Agile sprints.

Infosys Limited

Hyderabad, India

Software Test Engineer (client: Harley-Davidson ecommerce and financial services)

April 2018 – November 2019

- Authored 200+ manual test cases, test scenarios, and regression test cycles across functional, integration, and end-to-end phases, improving overall test coverage by 35% and ensuring high-quality releases throughout the SDLC.
- Designed test plans and executed 300+ functional, regression, and End-to-end test cycles, improving defect discovery rate by 30% and accelerating QA sign-off for releases.

- Identified and logged 75+ defects in Jira with structured documentation (summary, repro steps, expected vs actual results, severity, and screenshots), resulting in a 25% faster defect resolution rate due to improved clarity and traceability.
- Tracked sprint-wise QA metrics in Jira (defect density, execution velocity, reopen rate) and reduced defect leakage by 22% through early triage, daily standups, and continuous test reporting in Agile meetings.
- Reviewed 40+ software requirements and functional design documents to validate scope, identify test impact, and ensure 100% traceability between business needs and QA coverage.
- Collaborated with product development teams to design and manage 100+ enhancement-based test scenarios, improving requirement-to-test alignment and reducing rework by 30%.
- Converted 150+ high-priority manual regression and feature test cases into Selenium-Java automated scripts, enabling continuous execution on latest builds and reducing overall test cycle time by 40%.
- Designed and automated core regression suite using Cucumber BDD (Selenium-Java), replacing 150+ manual test cases and improving release confidence by 40% across Agile sprints.
- Conducted cross-browser and device compatibility testing via Sauce Labs (Chrome, Edge, Firefox, desktop, and Android, IOS mobile), improving user experience consistency by 25%, and documented detailed defects in JIRA.
- Supported peer QA engineers in framework setup and test design reviews, enhancing team productivity by 15%, and contributed to security and SaaS-based testing, strengthening release reliability by 15%.

PROJECTS

- **Enterprise Profitability and Cost Management (EPCM)** Oracle, 2023
Configured and validated financial allocation models in Oracle EPCM by creating dimensions, rulesets, and custom business logic to ensure accurate profitability reporting. Automated data integration pipelines between EPCM and PCM servers, improving data accuracy and reducing manual reconciliation time by 30%. Collaborated with developers and data engineers to optimise rule execution and streamline financial model performance.
- **Claims Auto-Adjudication & Member Portal Automation (UnitedHealth Group)** Infosys, December 2019.
Tested and validated claims auto-adjudication and member portal functionalities, including claim submission, eligibility checks, benefit lookups, payment adjudication, and status tracking. Ensured smooth integration between claims, provider, and member systems for accurate processing. Performed UAT testing and collaborated with end users for business acceptance, ensuring that business workflows met functional and regulatory requirements. Improved overall test coverage by 25% and reduced error cycles by 30% through early validation and continuous testing, enhancing system reliability and release quality.
- **Harley-Davidson Financial Services** Infosys, February 2019
Tested and automated credit and financing workflows for Harley-Davidson dealers, covering loan applications, financing approvals, and accessory or insurance add-ons. Verified interest rates, EMI schedules, and dealer-specific finance rules across multiple U.S. regions to ensure accurate billing and payments. Improved financial record accuracy and reduced defects by 30%, boosting overall testing.
- **Harley-Davidson E-commerce** Infosys, April 2018
Tested and automated Harley-Davidson's e-commerce workflows, including user and dealer registrations, order placement, and promo code validations across U.S. regions. Verified payment processing, order tracking, and dynamic pricing during major sales events. Validated end-to-end order management and POS integration workflows, ensuring seamless data flow between online and retail systems. Ensured accurate tax, discount, and delivery calculations, improving test coverage by 40% and reducing manual validation time by 30% for a smoother customer experience.

AWARDS AND CERTIFICATIONS

- Oracle: Received the "Awesome Award" from the Director for identifying and raising 200+ bugs in the EPCM product.
- Infosys: Received Top Performer and Good Team Player awards for project delivery and automation contributions [\[Link\]](#).
- IBM Data Analyst [\[Link\]](#)
- Oracle Cloud Infrastructure 2023 Certified Foundations Associate [\[Link\]](#)
- Tricentis Automation Specialist Level 1.
- Tricentis Automation Specialist Level 2.
