

Ajay Shugan Sadagopan

DevOps engineer

Location: AZ | Mobile: 623-252-0472 | ajay.s@itjobinbox.com

SUMMARY

DevOps Engineer with 3+ years of experience optimizing multi-cloud infrastructures (AWS, Azure, GCP). Skilled in container orchestration (Kubernetes, ECS, Fargate), Infrastructure as Code (Terraform, Pulumi, CloudFormation), and CI/CD pipelines (Jenkins, GitLab, GitHub Actions). Demonstrated success in reducing costs, increasing release speed, and enhancing security via robust IAM policies and monitoring (CloudWatch, Prometheus-Grafana, ELK). Adept at leading cross-functional teams utilizing Agile methodologies, including Scrum and Kanban, and mentoring junior engineers to drive continuous improvement.

SKILLS

Methodologies: Agile, Scrum, Kanban, Waterfall
Cloud Platforms: AWS (EC2, S3, Lambda, RDS, IAM, VPC, CloudFront), Azure (VMs, Blob Storage, AKS), GCP
Infrastructure as Code (IaC): Terraform, AWS CloudFormation, Ansible, Pulumi
CI/CD Pipelines: Jenkins, GitHub Actions, GitLab CI/CD, CircleCI, Argo CD
Containerization & Orchestration: Docker, Kubernetes (EKS, AKS, GKE), Helm, Docker Swarm
Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, SVN
Configuration Management: Ansible, Puppet, Chef
Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Datadog, Splunk
Scripting & Automation: Bash, Python, PowerShell, Groovy
Linux/Unix Administration: Ubuntu, CentOS, RHEL, Shell Scripting
Networking & Security: DNS, TCP/IP, VPN, Load Balancers (ALB, NLB), Firewalls, WAF

EDUCATION

Master of Science in Information Technology Arizona State University	May 2024
Bachelor of Technology in Information Technology SRM - Valliammai Engineering College, Tamil Nadu	May 2021

EXPERIENCE

Quantum Integrators, AZ | Sep 2024 - Current | DevOps engineer

- Spearheaded on-premises workload migrations to AWS using Terraform, resulting in a 30% reduction in infrastructure costs and improved scalability.
- Managed Kubernetes (EKS) clusters to orchestrate microservices, maintaining 99.9% uptime and seamless auto-scaling.
- Implemented AWS CloudWatch and Prometheus-Grafana dashboards for monitoring, cutting incident response times by 50%.
- Enhanced security by implementing IAM policies, VPC peering, and WAF rules, safeguarding resources against unauthorized access.
- Designed and implemented CI/CD pipelines (Jenkins, GitLab CI/CD) for automated deployments across multiple environments, resulting in a 40% reduction in release time.
- Automated infrastructure provisioning and configuration management using Ansible, resulting in a 25% reduction in manual errors.
- Adopted Agile (Scrum) methodologies with cross-functional teams, resulting in a 35% increase in sprint delivery efficiency.

Mr. Cloud Guy | May 2024 - Aug 2024 | DevOps Engineer Intern

- Utilized Terraform for automated AWS infrastructure management to set up and configure ECS Fargate clusters, ECR repositories, and CloudWatch for centralized logging and monitoring. Managed ECS task definitions and services for scalable container orchestration.
- Built Docker images and employed AWS ECR for secure storage and deployment. Set up ECS Fargate tasks to retrieve pictures from ECR, ensuring efficient and dependable containerized application performance.
- Utilized Git for version control, including cloning repositories and updating configurations. Shifted the deployment approach from EC2 to ECS Fargate, enhancing resource efficiency and simplifying operations.

Orion Technolab, India | Jan 2020 - July 2022 | DevOps engineer

- Led adoption of Azure services (AKS, VMs, Blob Storage), optimizing resource utilization and achieving 20% cost savings.
- Developed GitHub Actions and Argo CD pipelines for multi-cloud deployments across AWS and Azure, ensuring zero-downtime releases.
- Deployed Helm charts for templated Kubernetes deployments and managed GKE clusters, ensuring high availability.
- Automated Infrastructure as Code (IaC) with Pulumi and AWS CloudFormation, standardizing environments across teams.
- Implemented the ELK Stack (Elasticsearch, Logstash, Kibana) for centralized logging, resulting in a 60% improvement in debugging efficiency.
- Configured Azure Load Balancers and DNS strategies to optimize traffic routing and reduce latency by 15%.
- Streamlined Linux (RHEL/CentOS) server management using Bash/Python scripting, automating 90% of routine tasks.
- Integrated Datadog for unified monitoring of hybrid infrastructure, reducing Mean Time to Recovery (MTTR) by 30%.
- Mentored junior engineers on Kanban and Infrastructure as Code (IaC) best practices, boosting team productivity.

PROJECTS

AKS Web Deployment Automation 2024

- Set up a web application on an AKS cluster using Helm charts and Kubernetes, covering frontend, backend, and MongoDB components for seamless deployment.
- Built-in flexibility with autoscaling, Horizontal Pod Autoscaler (HPA), and replicas to keep things running smoothly, even under high demand.
- Strengthened security and reliability by implementing network policies, dedicating storage for MongoDB, and utilizing a Load Balancer service to manage external access.
- Used Terraform for automated infrastructure setup, securely storing configurations in Azure Blob Storage, and enabled Azure Monitor for real-time performance insights.
