SUMMARY

Full Stack Developer with 2+ years of experience building scalable web applications using modern technology stacks including Java Spring Boot, Angular, React, and cloud platforms. Expertise in API development, database optimization, and DevOps practices with proven ability to enhance system performance, streamline deployment processes, and deliver robust solutions through collaborative Agile development methodologies.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Java, Python, SQL

Frontend Development: HTML5, CSS3, JavaScript, TypeScript, React, Redux, Angular, Bootstrap, jQuery, AJAX

Backend Development: Spring Boot, Spring MVC, Spring Security, Hibernate

Database Technologies: MySQL, PostgreSQL, MongoDB, Oracle

Version Control & CI/CD: Git, GitHub, Jenkins, Docker, Kubernetes

Cloud & DevOps: AWS (S3, EC2, Lambda), Docker, Microsoft Azure, Tomcat Server Configuration

API Development: Swagger, RESTful APIs, GraphQL, Postman Web API

Testing Tools: Jest, JUnit, Mockito, xUnit

Soft Skills: Problem-Solving, Time Management, Adaptability, Attention to detail, Collaboration with cross function teams

EDUCATION

Masters in Computer Science

December 2024

Avila University, Kansas City, MO

B.COM in Computer Applications

June 2023

Satavahana University, India

PROFESSIONAL EXPERIENCE

Java Full Stack Developer | CVS Heath, Texas

June 2024 - Current

- Transformed patient eligibility verification process by developing web portal using **Java 17**, **Spring Boot** with **Maven** backend and **HTML5**, **CSS3**, **Angular 17**, **TypeScript** frontend, reducing manual processing time by 40%.
- Enhanced member enrolment experience through **RESTful APIs** built with **Spring MVC**, integrated **Angular 17** with **TypeScript** for interactive features, documented with **Swagger** for seamless healthcare provider system connections.
- Streamlined healthcare claims processing by designing **SQL server** database schemas with Hibernate, implemented **SQL** queries and CRUD operations that improved system response times for faster claim approvals.
- Improved member plan selection by creating responsive comparison tools using **Angular** and **Bootstrap 5** components, collaborated with **Agile Scrum** teams to deliver user-friendly interfaces increasing engagement rates by 35%.
- Enhanced application deployment by implementing **Git** workflows and Jenkins builds for releases to **AWS S3**, configured **Tomcat** server deployments achieving uptime standards for critical member healthcare services.
- Ensured application reliability by implementing unit testing with **JUnit 5** and **Mockito** for **Spring Boot** backend and **Jest** for **Angular** frontend, maintained code quality in **Git** repositories achieving coverage standards.

Full Stack Developer | Vivma Software INC, India

August 2022 – July 2023

- Developed patient portal using **React18**, **JavaScript** frontend and **Spring Boot**, **PostgreSQL** backend, implementing role-based security protocols, delivering 15 key features used by 2,000+ patients monthly.
- Collaborated with cross-functional teams using **Agile** methodology, prioritizing development through daily stand-ups and sprint planning, achieving on-time delivery of project milestones quarterly.
- Designed RESTful APIs with comprehensive **Postman** documentation for frontend-backend communication, implementing version control with **Git** and creating integration patterns that would facilitate future low-code platform adoption, improving system response time by 40%.
- Optimized application performance through **React 18** component restructuring, efficient **Tailwind CSS** styling, and **PostgreSQL** query tuning, reducing page load times from 3.2s to 1.5s.
- Optimized **CI/CD pipelines** through **Docker** containerization and **Kubernetes** orchestration, automating deployments for 20 microservices using **Jenkins**, reducing release cycles and deployment errors.
- Addressed scalability by containerizing with **Docker** and deploying to load-balanced **Azure** cloud services, building data modeling expertise transferable to **DataVerse**, while ensuring secure storage of healthcare data and increasing concurrent users without performance degradation.
