EXPERIENCE

Data Science Intern | *PI Software Solutions* | Atlanta, GA

May 2024 – Dec 2024

- Built a 12-month cohort retention and resurrection analysis on e-commerce data by calculating monthly retention rates and identifying customers returning after 2+ months of inactivity, enabling insights into long-term engagement.
- Developed a CLV model by segmenting customers based on 90-day behavior and calculating lifetime value using order value, frequency, and lifespan; recommended max CAC per segment using a 3:1 LTV:CAC ratio to optimize acquisition.
- Prepared clean customer cohorts by structuring raw e-commerce data using Excel, pandas, and SQL.

Research Data Scientist | *Georgia State University* | Atlanta, GA

Jan 2024 – Present

- Improved care review speed by 15% by building Power BI dashboards that tracked readmissions, chronic disease trends, and provider performance using advanced DAX and Power Query.
- Led a cross-functional initiative to unify siloed datasets from HR, wellness, and EMR systems, creating a centralized reporting layer that improved report delivery time by 40% and ensured consistency across stakeholders.

Data Analyst | *Accenture (Healthcare and Life Sciences)* | Mumbai, India

Dec 2022 – Jan 2024

- Conducted UAT and pipeline testing across ADF, Databricks, and Power BI; implemented data quality checks using DAX and Power Query, achieving 99.5% accuracy in executive dashboards for underwriting and compliance.
- Transformed raw EHR, claims, and biometric data using SQL in Databricks and Python scripts, enabling accurate KPI tracking for chronic care management and contributing to \$1.2M in cost-avoidance through early risk identification.
- Partnered with product and analytics teams to run A/B tests on a client-facing health monitoring app, analyzing engagement and clinical behavior to drive data-informed feature optimization for patient adherence and app retention.
- Designed and optimized a scalable Snowflake data warehouse with star-schema models and SQL-based reporting layers, improving query performance by 15% for key workloads like claims aging, premium analysis, and utilization.
- Created and maintained data lineage, transformation logic, and business rule documentation across Snowflake and Power BI, streamlining audit processes and reducing new analyst onboarding time by 30%.

Data Analyst | *IBM* | Hyderabad, India

Jan 2020 – Dec 2022

- Architected and deployed 20+ data pipelines using AWS Glue, Lambda, and S3 to ingest and process Oracle CDC, third-party, and API data sources—reducing data latency by 30% and enabling near real-time insights.
- Collaborated with 6 business teams to monitor Power BI adoption and optimize dashboards linked to Snowflake views, improving performance and stakeholder engagement by 40%.
- Translated insurance reporting requirements into Snowflake dataflows and Power BI-ready views, supporting scalable KPI dashboards for premium tracking, claim aging, and compliance monitoring.
- Automated data validation workflows using SQL, Python, and SAS across 50M+ policy and claim records, ensuring 99.99% accuracy and reducing audit exceptions by 25%.
- Redesigned Snowflake schemas during Oracle and MySQL migration to optimize ODS and fact layers, cutting ETL refresh time by 50% and uncovering \$500K in previously unreported premium revenue.

TECHNICAL SKILLS AND CERTIFICATIONS

Programming & Cloud Technologies: Python, SQL, R, PySpark, Shell Scripting (Linux/Unix), AWS, Azure, GCP

Data Engineering Tools: Fivetran, Dbt, Kafka, Hadoop, Spark, Snowflake, ERWIN, REST APIs, Hive

Data Science & Machine Learning: Scikit-learn, TensorFlow, Keras, MLflow, Pandas, NumPy, NLTK, Jupyter

Analytics, Visualization & DevOps: Alteryx, Tableau, Power BI, Excel, Docker, Git, Jenkins, Agile Methodology

Certifications: AWS Data Analytics, Azure Data Scientist Associate, GCP Data Engineering (Skills Boost)

EDUCATION

Georgia State University

Atlanta, Georgia

MS in Computer Information Systems, Track: Big Data & Analytics

Jan 2024 – Dec 2024

Relevant Coursework: Distributed Computing, Deep Learning, AI for Business, Computer Vision, Data Analysis

University of Mumbai

Mumbai, India

Bachelor of Science in Electronics and Telecommunication

May 2015 – Jul 2019

ACADEMIC PROJECTS EXPERIENCE

YouTube Trending Data Analysis (Data Engineering)

(Sep 2024 - Oct 2024)

- Built a serverless AWS data lake to analyze YouTube trending data from 10+ countries using S3, Glue, and Athena. Enriched raw CSVs with category metadata and optimized them into partitioned Parquet for efficient querying. Visualized regional trends in views and likes via QuickSight dashboards with IAM-based access and CloudWatch monitoring.

Health Insurance Fraud Detection (Python, Scikit-learn, EDA, Healthcare Data)

(May 2024 - Jul 2024)

- Performed exploratory data analysis (EDA) on healthcare claims data to uncover fraud-prone patterns, improving detection accuracy by **25%** through anomaly profiling and feature engineering.
- Applied supervised machine learning models to classify fraudulent claims, achieving a **30% increase** in fraud identification compared to traditional rule-based systems.
