

AKASH PONNAM

Email: akshpnm@gmail.com | Phone: (562) 837-7933 | Location: Long Beach, CA | (<https://www.linkedin.com/in/akashponnam>)

SUMMARY

Data analyst with 2+ years of experience at McKinsey and Dell, specializing in SaaS, e-commerce, and healthcare domains. Hands-on experience with Medicaid and Medicare systems, including claims processing and HIPAA-compliant data handling. Increased KPI adoption across marketing and GTM teams by 3x by designing marketing analytics dashboards in Tableau and Power BI. Holds certifications including Microsoft Certified: Power BI Data Analyst Associate and AWS SysOps Administrator.

PROFESSIONAL EXPERIENCE

McKinsey & Company | Oct 2024 –Current | Data/Risk Analyst | CA, USA

Project 1 – Claims Intelligence & Model Enablement (Life Sciences)

- Collaborated with cross-functional teams to translate complex business questions in the life sciences space into structured data models and 12+ KPIs, supporting predictive analysis of treatment adherence and \$5M in annual drug reimbursement outcomes.
- Assembled and implemented HIPAA-compliant ETL pipelines using AWS Glue, Python, and Redshift to consolidate 100M+ records from EHR data, prescriptions, and insurance claims, reducing manual integration time by 40%.
- Developed feature engineering workflows for machine learning models predicting claims approval likelihood, using PyTorch, scikit-learn, and Pandas, enabling data scientists to iterate faster on model performance.
- Crafted interactive dashboards in Power BI to visualize patient-level trends, claim approval rates, and adherence patterns, improving visibility for 200+ medical and reimbursement stakeholders.
- Applied data wrangling and cleansing techniques to ensure data quality across unstructured clinical notes, structured claims data, and pharma supply chain records, achieving 99.2% model-ready data accuracy.
- Partnered with scientific AI researchers to productionize ML prototypes into Flask-based tools, integrating seamlessly with client data platforms and reducing go-to-insight time by 35%.
- Authored technical documentation and data dictionaries to support data governance and reproducibility, improving knowledge transfer across engineering, actuarial, and analytics teams.
- Led efforts to optimize SQL queries for Redshift and SQL Server environments, improving dashboard refresh times and enabling near real-time analytics across reimbursement workflows.

Project 2 – Risk Modeling for Credit & Stress Testing

- Implemented Monte Carlo simulation workflows to model default probabilities and exposure at default (EAD), improving forecast accuracy by 22% in adverse scenarios.
- Built Power BI dashboards to visualize exposure concentration, delinquency patterns, and recovery curves, enabling real-time recalibration of lending thresholds.
- Led validation of credit scoring models using K-fold cross-validation, ROC/AUC, and feature importance analysis—uncovering three major weaknesses in legacy scoring logic and improving AUC by 11%.
- Partnered with data science and actuarial teams to automate pipelines from legacy sources into SAS and Python, reducing model refresh cycles from monthly to weekly.
- Translated credit policy gaps into structured risk KPIs by disaggregating underwriting performance across borrower cohorts and distribution channels.

Dell Technologies | Aug 2021 - Jul 2022 | Data Analyst | India

- Architected scalable ETL pipelines using AWS Glue and Python, automating the ingestion and transformation of multi-source enterprise data including sales, campaign performance, and CRM, reducing reporting lag and improving time-to-insight for GTM and operations teams.
- Led segmentation analysis for 6,000+ customer accounts using SQL and advanced filtering logic to identify a previously untapped high-LTV audience segment, enabling targeted marketing campaigns that drove an 18% uplift in conversion across three regional markets.
- Constructed Power BI scorecards for Marketing Ops and Sales Enablement to track KPIs like campaign ROI, funnel velocity, and churn risk, used by 11+ global teams, influencing quarterly GTM adjustments and budget realignment.
- Streamlined reporting processes by optimizing SQL queries and configuring data models in Power BI, improving dashboard responsiveness and enabling real-time performance reviews across compliance, supply chain, and finance for 11+ stakeholder groups.
- Configured Salesforce data pipelines using Pandas and SQL, extracting granular marketing and lead lifecycle data to drive attribution reporting, reduce manual overhead, and improve compliance audit readiness for 30+ enterprise clients.
- Collaborated with PMs, Campaign Analysts, and Sales Ops to translate abstract business questions into quantifiable metrics and dashboards, aligning insights with pipeline forecasting, retention initiatives, and regional rollout strategies.
- Conducted deep-dive analytics on campaign performance and web engagement behavior, uncovering drop-off points and influencing 5 A/B test cycles that improved engagement by 22% over two quarters.

- Participated in Agile sprints and backlog grooming sessions, ensuring alignment between analytics delivery and evolving stakeholder priorities, while reducing ad hoc report turnaround times by 25%.

Trigent Software | Feb 2021 - Jul 2021 | Data Analyst Intern | India

- Processed and validated structured and unstructured data using Python and SQL, supporting senior analysts with trend insights and assisting data engineers in refining pipelines, reducing discrepancies by 15+ entries per report through robust data quality checks.
- Improved data warehousing strategies by integrating MongoDB for flexible, high-volume storage and Oracle for transactional systems, enhancing query response time by 2x in critical business apps.
- Formulated over four scalable data pipelines using Google cloud tools, including BigQuery for analytics and Dataflow for stream processing enabling advanced business intelligence and analytics capabilities.
- Re-designed Django-based pipelines to consolidate data from 5+ departments into centralized storage, improving data accessibility and compliance monitoring, and reducing manual integration steps by 70%.
- Enhanced Git version control workflows for analytics scripts, enabling collaborative development and improving deployment speed for big data jobs by 35%.
- Created Excel dashboards to visualize key financial KPIs and trends, allowing department heads to act on insights faster and improving monthly reporting efficiency by 20%.
- Automated 3+ workflows using data mining techniques, diminishing time and boosting key business tasks such as risk assessment, performance monitoring, and compliance reporting, improving operational agility and accuracy.

TECHNICAL SKILLS

Programming Languages:	Python, SQL (T-SQL, PostgreSQL), R, SAS, Bash
Methodologies:	Agile, Waterfall
Data Visualization:	Power BI (DAX, Power Query), Tableau, Microsoft Excel
Cloud Platforms:	AWS (S3, EC2, Redshift, IAM, Glue)
Databases:	MySQL, SQL, Oracle, MongoDB, Elastic Search
Version Control Tools and Others:	Git, GitHub, Docker, Jenkins, Visual Studio Code
Big Data & Machine Learning:	Hadoop, Spark, PyTorch, Kafka, HDFS, MapReduce
ETL Tools:	Informatica, SSIS, Talend, Apache Nifi, ETL Automation, Airflow
Data Analysis & Modeling:	A/B Testing, Regression, Clustering, Time Series, Root Cause Analysis
Libraries and Frameworks:	NumPy, Pandas, SciPy, PySpark, Matplotlib, Flask, Django

EDUCATION

California State University Long Beach | Aug 2022 – May 2024

Master of Science in Computer Science | Long Beach, CA, USA

Vellore Institute of Technology | Aug 2018 – May 2022

Bachelor of Technology in Computer Science | Andhra Pradesh, India

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- AWS SysOps Administrator (AWS SOA-02)
- AWS Cloud Practitioner (AWS CLF-C02)
- OCI Gen AI Professional
